DARWEN ACADEMY, LAND AT REDEARTH ROAD AND SOUGH ROAD, DARWEN

Darwen Academy, Desk-Based Archaeological Assessment of Land at Redearth Road and Sough Road, Darwen

Martin, A.L. Chester : Gifford & Partners, 2006, 91pp, pls, figs, tabs, refs, CD

Work undertaken by: Gifford & Partners

A desk-based assessment was carried out and revealed that for the site, the key period would appear to have been the industrial revolution and the early 20th century. The landscape of the site had been created by both agricultural and extractive development of the 18th and 19th centuries (Slough Road) and the development of mass housing, places of worship for the growing population, retail premises and places of work such as cotton mills and iron foundries (Redearth Road). PROPOSED HOUSING DEVELOPMENT AT MIDDLE FARM, TALLENTIRE

Archaeological Desk-based Assessment and Site Visit For A Proposed Housing Development at Middle Farm, Tallentire, Cumbria

Gaskell, N Nenthead : North Pennines Archaeology Ltd, 2006, 31pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological desk-based assessment was carried out at proposed housing development at Middle Farm. Roman archaeology could have been present due to the Roman road passing the site. Medieval

archaeology was present due to the fact that the village itself and associated field systems were medieval in date. In the post-medieval period the village was extended and rebuilt and therefore significant post-medieval remains were expected. This change might have come about due to the quarries and lime kilns which were extant in the area, local stone being utilized for local buildings and fertilizing the local fields. [Au(adp)]

Broughton Lodge, Broughton Moor, Cumbria - Archaeological Desk-based Assessment and Walkover Survey

Claydon, M Durham : University of Durham, Archaeological Services, 2006, 54pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

An archaeological desk-based assessment was carried out in advance of the proposed development of a wind farm. The assessment comprised a search of pertinent documentary and cartographic records and a field visit. There were no historic or statutorily protected buildings in the vicinity of the site, with the structures on site being of 18th and 20th century date. The World Heritage site of Hadrian's Wall lay within 4km of the study area. The study area remained agricultural land in the post-medieval period. Quarrying and later mining dominated some areas of the site. Earlier activity was thought possible but there was no specific evidence. The proposed development had the potential to impact upon the archaeological resource through the construction of foundations and associated services. [Au(adp)]

Sowerby, M Nenthead : North Pennines Archaeology Ltd, 2006, 41pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

The desk-based assessment located 26 Listed sites within 1km of the study area, of which eight were in a 0.5km zone around the development area. The assessment also recorded 15 Listed buildings within the village of Papcastle, generally Romano-British in date and associated with the fort of Derwentio. Two Roman roads were expected to extend into the site. There were also traces of medieval field systems, however, the site visit failed to observe any earthworks other than a post-medieval field boundary with no traces of ridge and furrow. [Au(adp)]

CARLISLE AIRPORT DEVELOPMENT

Carlisle Airport Development - Cultural Heritage Desk Top Study Report

Capita Symonds London : Capita Symonds, 2006, 41pp, pls, figs, refs

Work undertaken by: Capita Symonds

An archaeological desk-based assessment was carried out at Carlisle Airport. In total, 52 sites of cultural heritage interest were identified within the study area. The HER contained a total of 39 sites within the area, three of which were Scheduled and 14 were Listed. The Scheduled Monuments included Watchclose Temporary Camp, within the airport perimeter, a motte castle in Irthington village and Hadrian's Wall and vallum which had three separate Scheduled entries for that section within the study area. The airport lay wholly within the World Heritage site of Hadrian's Wall. Within the study area there were four prehistoric sites, 11 Roman, four medieval, 22 post-medieval and five from the 20th century, all of which pertained to the use of Carlisle Airport as an RAF training airfield in WWII. There were six cropmark sites of unknown date. Nine new sites were identified during this desk-based assessment including the control tower and an air raid shelter for the airfield, two quarries associated with the enclosure of the commons in the late 18th century and five medieval farms. PROPOSED REDEVELOPMENT AT QUEEN ELIZABETH GRAMMAR SCHOOL ANNEXE, PENRITH

Archaeological Desk Based Assessment and Site Visit For A Proposed Redevelopment at Queen Elizabeth Grammar School Annexe, Penrith, Cumbria

Davies, G Nenthead : North Pennines Archaeology Ltd, 2006, 53pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological desk-based assessment and site visit was carried out at the proposed redevelopment at Queen Elizabeth Grammar School. The desk-based assessment located 42 sites from the HER and 162 Listed buildings within a 1km radius. The three HER finds located closest to the Queen Elizabeth Grammar School annexe site were a sculpted stone head of probable medieval date, an Elizabethan coin and a perforated stone of unknown function and date. The Listed buildings closest to the study site were a telephone kiosk outside the station and the remains of Penrith Castle. The site visit suggested that the earthworks or ditching associated with a southern extension of the castle grounds would be located underneath the road. Therefore certain archaeological remains could be expected on the site, especially later medieval and post-medieval period. [Au(adp)]

SCORDALE

Scordale, Cumbria - an Archaeological Survey and Investigation of A Bronze Age Field System And Dispersed Settlement

Hunt, A & Oswald, A London : Archaeological Survey & Investigation, 2006, 11pp, colour pls, figs, refs

Work undertaken by: Archaeological Survey & Investigation

An archaeological desk-based assessment was carried out at Scordale. The archaeological survey and investigation of a Bronze Age field system and dispersed settlement included half of a Scheduled Ancient Monument. The survey demonstrated that the field remains extended westwards and possibly eastwards beyond the existing boundary of the Scheduled Ancient Monument. These Bronze Age fields were usually associated with cairns, resulting from the clearance of unwanted stones. There were also a few roundhouse platforms and one or two smaller enclosures within the broader field system that may have been directly linked with the roundhouses. During the course of the field survey a flint secondary waste flake was found in a molehill. [Au(adp)]

Wild Road Park, Ormside, Appleby-In-Westmoreland, Cumbria

Railton, M Durham : University of Durham, Archaeological Services, 2006, 18pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

The walkover survey comprised a visual inspection of the proposed development area. It was possible that prehistoric/Romano-British settlement was located on the south side of the proposed development area. A small cairn of unknown date was located on the north side of the site. The area was enclosed in the post-medieval period. Fragmentary ridge and furrow earthworks and a number of trackways survived within the proposed development area. A small area of well-preserved ridge and furrow

earthworks was located towards the centre of the site. A post-medieval corn mill was situated close to the north side of the site. A mill race crossed the west side of the proposed development area, and survived as an earthwork. [Au(abr)]

30-34 George Leigh Street, Ancoats, Manchester - an Archaeological Desk-based Assessment

Gregory, R Manchester : University of Manchester Archaeological Unit, 2006, 28pp, colour pls, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological desk-based assessment was carried out at proposed development at the corner of George Leigh and Cotton Street, Ancoats. The study area contained upstanding remains of a clergy house and Catholic school. Potential below ground remains relating to a Roman Catholic school and a 19th century public house were expected. CENTRAL SPINE - MEDIA ZONE

Central Spine - Media Zone, Manchester - An Archaeological Desk-based Assessment

Arrowsmith, P Manchester : University of Manchester Archaeological Unit, 2006, 66pp, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological desk-based assessment found the earliest sites identified within the study area to be industrial works, mostly used for textile finishing which were established in the 1780s or early 1790s. Then industrial buildings followed, including Gaythorn mill, Medlock Bridge mill, a tannery, a size works, chemical works and the Graythorn gas works, originally established in the 1820s. On Cambridge Street, mills were established from the 1790s and in the early to mid 19th century. One factory was built within the study area, alongside some workers' houses. Other development followed, however, by the mid 20th century, most houses were removed and redeveloped with other works and warehouses. The works would likely damage any below ground archaeology so a watching brief was recommended. [Au(adp)]

ICIAN HOTEL, SMITHFIELD*Ician Hotel, Smithfield, Manchester - an Archaeological Desk-based Assessment*

Arrowsmith, P Manchester : University of Manchester Archaeological Unit, 2006, 33pp, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological desk-based assessment was carried out at the site of a proposed Phase 4 hotel development in Smithfield. On cartographic evidence the study area was first developed in the late 18th century, when a dispersed arrangement of buildings was erected here. The study area underwent wholesale redevelopment c.1820, roughly contemporary with the establishment of Smithfield market on adjacent land and involving the construction of new housing-cum-commercial premises along with public houses. In the early and mid 20th century it underwent further development replacing earlier buildings with new covered market area and in the north of the study area with the office building which was still standing. There was potential for the survival of archaeological remains of high local significance. [Au(adp)]

LAND AT GREENGATE, SALFORD*An Archaeological Desk Based Assessment of Land at Greengate, Salford*

Holden, S Durham : Pre-Construct Archaeology Ltd, 2006, 60pp, figs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

As part of the regeneration of Salford city centre, a number of redevelopment schemes were being considered. An desk-based assessment was undertaken at land at Greengate, Salford. The study area was located directly over an area of known historical significance, the core of the medieval area known as Chapel Street, Greengate and Gravel Lane. Little was known of the surviving potential of the site and a proposed development might allow a unique opportunity to gather more information about this area. The archaeological potential for prehistoric, Roman or Saxon material was very low, the potential for medieval material was high and the potential for post-medieval remains was very high. [Au(adp)]

BURNLEY OVAL

Burnley Oval - Archaeological Desk-based Assessment

Arrowsmith, P Manchester : University of Manchester Archaeological Unit, 2006, 68pp, colour pls, figs, refs, CD

Work undertaken by: University of Manchester Archaeological Unit

An archaeological desk-based assessment revealed that there were several standing buildings of varying dates. The study area also contained several sites with few or no visible remains. The earliest known site was the bank house, documented from 1476 and later rebuilt in 1721, probably replacing an earlier re-building of the late 16th or 17th century. It was demolished c.1908, when the county court

was built on the site. Other sites dated from the industrial revolution. Salford Mill in the northwest of the study area was built in 1821 followed by an adjacent size works in 1823. The most intense period of development came in the 1840s to the early 1850s, with the Bankfield mill in 1842, worker's houses on the east side of Curzon street between 1841 and 1844 and the Bethesda street Iron Foundry c 1851. Several additions in the form of sheds followed. The standing buildings in the east of the study area were included on the local list of building maintained by Burnley Borough council, hence being of regional significance. [Au(adp)]

GAWTHORPE HALL WALLED GARDEN

Gawthorpe Hall Walled Garden Survey & Assessment Final Report Vol. 1 Text

Chris Burnett Associates Malpas : Chris Burnett Associates, 2006, 41pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Chris Burnett Associates

The survey and assessment revealed that the walled garden at Gawthorpe was significant as a late Victorian/Edwardian kitchen garden. In itself it could be described as being locally important, although the fernery was a very attractive feature in its own right and was said to be a significant element of regional or national importance. The fern house at Gawthorpe was typical of the designs in the 1880–1890s when ferns were very popular. The fernery would have been the main entrance into the walled garden for the family and their visitors and this important approach was highlighted by the wonderful view of the uplands to the north from the entrance. It remained a very unusual and highly significant element of the walled garden design and was perhaps the single most impressive feature on site. Parts of the walled garden were in very poor condition and needed management action of some kind immediately. Other components had survived as relicts in a reasonable or stable condition. However these features would also be prone to further erosion if management action was not taken. [Au(abr)]

ELTON HEAD FARM, ST. HELENS

Elton Head Farm, St. Helens, Merseyside. Archaeological Desk-based Assessment

Elsworth, D Lancaster : Oxford Archaeology North, 2006, 37pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

Of the 18 sites identified within the study area only seven were considered likely to be affected. In addition to the watching brief already recommended, it was further recommended that a visual inspection and topographic survey be undertaken on two sites. [Au(abr)]

LAND AT SPITAL ROAD, BROMBOROUGH

Land at Spital Road, Bromborough, Merseyside. Desk-based Assessment

Healey, C Lancaster : Oxford Archaeology North, 2006, 32pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

In total, 16 sites of archaeological interest were identified within the study area. The majority of these were post-medieval or industrial in date, and with the exception of sites 4 and 12 (well and mill field respectively), consisted of buildings, particularly those relating to Bromborough Mill. The medieval and post-medieval precursors to this mill were also included. [Au(abr)]

PROPOSED DEVELOPMENT OF LAND AT CLEVES SCHOOL, OATLANDS AVENUE, WEYBRIDGE

A preliminary archaeological assessment of proposed development of land at Cleves School, Oatlands Avenue, Weybridge

Shaikhley, N Woking : Surrey County Archaeological Unit, 2006, 17pp, figs, refs

Work undertaken by: Surrey County Archaeological Unit

A preliminary archaeological assessment was carried out at the site. It was considered to have very high archaeological potential based on the known finds from the site and its surrounding area. Further testing of the site was recommended. [Au(adp)]

RISLEY LANDFILL EASTERN EXTENSION***Risley Landfill Eastern Extension. Archaeological Assessment***

Hayes, L Souhampton : Gifford & Partners, 2006, 18pp, colour pls, figs, refs

Work undertaken by: Gifford & Partners

The desk-study and walkover demonstrated that, while the assessment area sits within a landscape that has demonstrable human activity dating back to the Neolithic period, the marginal nature of the mossland precluded it from occupation or cultivation until the later half of the 19th century. SIXPENNY FIELDS, DALTON BANK***Archaeological Deskbased Assessment of Sixpenny Fields, Dalton Bank***

Statter, C London : L-P: Archaeology, 2006, 27pp, pls, figs, refs

Work undertaken by: L-P: Archaeology

Before a school was built on the site, it was agricultural land. There research has shown that a school building had been on the site since 1526 and subsequently rebuilt in 1688, 1707, 1829, and 1862. [Au(abr)]
