Archaeological desktop assessment of the River Ribble floodplain near Long Preston, North Yorkshire. Final report

the environment agency preston : the environment agency, 2006, 38pp, figs, refs

Work undertaken by: Environment Agency

An archaeological desk-based assessment was carried out and revealed a total of 48 recorded potential archaeological and historical sites within the study area. Although there were no Scheduled

Monuments, there were ten Grade II Listed buildings in the study area, along with a small portion of the Long Preston Conservation Area. There was a low to moderate spread of medieval agricultural archaeology over the site. The potential for buried remains was very high in some areas. A rapid walkover survey indicated that there was a high potential for archaeological remains. [Au(adp)]

HAVERAH PARK TOP, HAVERAH PARK

Haverah Park Top, Haverah Park, North Yorkshire - Archaeological Desk-Based Assessment

Pollington, M Morley : Archaeological Services WYAS, 2006, 34pp, colour pls, figs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological desk-based assessment was carried out, and revealed that the site lay within an historic landscape formed by and containing features that dated from the Iron Age and medieval period through to the early 20th century, and surviving as surface remains. Much of the present landscape had been influenced by three major factors: the creation of Haveragh Park in the 12th century, the enclosure of land and the construction of Penny Pot Lane turnpike road in the late 18th century and the creation of Beaver Dyke Reservoirs in the 1860s. The study site to the south of John of Gaunt's Castle had been occupied since at least the early 17th century and probably before. The existing structures and features surviving on the surface represented the remains of the 18th century farmstead and later mid-19th century buildings. The discovery of sub-surface archaeology was possible or other such structures, perhaps also relating to John of Gaunt's castle. [Au(adp)]

HIGH MERRYBENT BORROW PIT, MELSONBY

High Merrybent Borrow Pit, Melsonby, North Yorkshire - Archaeological Assessment

RJC Newcastle-upon-Tyne : The Archaeological Practice Ltd, 2006, 39pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

A cultural heritage assessment, which accompanied a planning application to use an area currently under pasture as a borrow pit in connection with the ongoing improvement works to the adjacent A66 road some 2km west of its junction with the A1, was carried out. The assessment identified six sites of local significance and one site of possible regional significance that would be directly impacted by the proposed development. One buried site of national importance, a section of the Scot's Dike, an early medieval earthwork, lay sufficiently close to the western site boundary that its setting would be visually impacted by the development. It was concluded that the area contained remains of sufficient significance to warrant mitigation by avoidance and preservation in situ. The only regionally significant site to be impacted by the development was a trackway and field boundary marking territorial divisions between Melsonby and Middleton Tyas townships/parishes and between Gilling West and Gilling East wapentakes. Although its preservation was poor, it was recommended to investigate further. [Au(adp)]

WHITBY MARINA DEVELOPMENT

Whitby Marina Development, North Yorkshire: Archaeological Desk-based Assessment

Claydon, M Durham : University of Durham, Archaeological Services, 2006, 24pp, figs, tabs, refs
Work undertaken by: University of Durham, Archaeological Services

Although there was little indication of prehistoric settlement in the coastal lowland, it was likely that the river estuary and coastline at Whitby was exploited during this time. There was evidence that the locality was occupied during the Roman period. Whitby was occupied during the early medieval period. Excavations show the area around the Abbey on East Cliff underwent much redevelopment from the mid 7th century onward, and there may have been further evidence of earlier settlement. The area around the harbour had been settled since at least the 12th century. During the medieval period the town grew as a North Sea fishing port and shipbuilding centre. The town was made famous by the two voyages of Captain Cook in the 18th century. [Au(abr)]

PROVIDENCE MILL, SELBY

Providence Mill, Selby - Cultural Heritage Assessment

Finch, N & Jones, A Leeds : Scott Wilson, 2006, 36pp, colour pls, pls, figs, refs

Work undertaken by: Scott Wilson

A cultural heritage assessment was carried out at Providence Mill and documentary and cartographic evidence suggested very low potential for the presence of pre-industrial archaeological deposits on the site. Geotechnical data gave no indication of buried deposits, apart from a flood defence measure prior to the construction of industrial buildings. The complex of a mid 19th century mill building associated with the production of linseed oil had been frequently expanded and altered throughout the late 19th and 20th centuries and the built heritage appraisal identified only fragmentary surviving elements of the original structures. CLIFF PLANTATION AND STABLES WOOD, BARNBURGH

Archaeological Desk-based Assessment and Woodland Survey of Cliff Plantation And Stables Wood, Barnburgh, South Yorkshire

Stenton, M, Breeden, C & Holderness, H Sheffield : ARCUS, 2006, 53pp, colour pls, figs, tabs, refs, CD

Work undertaken by: ARCUS

An archaeological desk-based assessment and woodland survey was carried out. Several sites of prehistoric and Romano-British origin were in the vicinity of the study area. The site was enclosed in 1819 with the plantation being established by 1839 and appeared to have been actively managed with coppicing, possibly occurring up until the mid 20th century. The northern section was heavily quarried Cliff cottage was constructed between 1819 and 1839 and there was no evidence of earlier properties built on the site. Stables Wood was part of an area of seigniorial enclosure enacted by the Lords of Barnburgh prior to the 1819 parliamentary enclosures. The site was named as an Ancient Wood in 1819. There was evidence of coppicing during the 20th century. In the light of the site's ancient status, this suggested that Stables Wood may have been established as a spring wood during the 16th to 18th century. [Au(adp)]

LAND AT ADWICK SCHOOL, WOODLANDS, ADWICK LE STREET
Archaeological Desk-based Assessment of Land at Adwick School, Woodlands, Adwick Le Street, South Yorkshire

Stenton, M Sheffield : ARCUS, 2006, 27pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological desk-based assessment was carried out at land at Adwick School, Woodlands. Several sites of importance of Roman and Viking date were identified in the vicinity of the study area, such as the earliest Viking female burial. The study area itself was undeveloped on the earliest extant maps. Its proximity to medieval and post-medieval settlement sites suggested that the land may have been in agricultural use during these periods. Cartographic evidence indicated that with the exception of an early 20th century cricket ground and pavilion the site remained largely undeveloped prior to the construction of the school during the 1940s. 1 and 1B Church Lane, Bessacarr, Doncaster, South Yorkshire - Archaeological Desk-based Assessment

Gardner, RD Lincoln : Pre-Construct Archaeology (Lincoln), 2006, 15pp, colour pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology (Lincoln)

An archaeological desk-based assessment showed that the archaeological potential for this area was moderate for the Iron Age period and high for the Roman period. Iron Age/Early Romano-British field systems were widespread in Cantley parish. It was adjacent to the Roman road and lay within an operating area of the Cantley pottery kilns, a major Roman industrial enterprise. However, the site was quarried for gravel in the 19th century and therefore it was unlikely that archaeological remains would have survived to any great extent. [Au(adp)]

LAND AT THE EMBANKMENT, LEACH LANE, MEXBOROUGH
An Archaeological Desk-based Assessment of Land at the Embankment, Leach Lane, Mexborough, South Yorkshire

John Samuels Archaeological Consultants Newark : John Samuels Archaeological Consultants, 2006, 27pp, figs, tabs, refs

Work undertaken by: John Samuels Archaeological Consultants

An archaeological desk -based assessment found evidence of prehistoric and Roman activity in the form of worked flint and Roman coin findspots. There were no Anglo-Saxon remains evident, however, the village name (Mexborough) suggested that it was founded pre-Norman conquest as part of a chain of defensive sites established near the Rivers Don and Dearne. The site of the later motte and bailey castle lay approximately 900m east of the site was likely to be that of the original pre-Norman fort. However, it was concluded that the site had a low potential for archaeological remains and therefore no further investigation was suggested. [Au(adp)]

MARR LODGE WINDFARM
Marr Lodge Windfarm - Desk-based Archaeological Assessment

ARCUS Sheffield : ARCUS, 2006, 55pp, figs, tabs, refs

Work undertaken by: ARCUS

A desk-based assessment was carried out. The development would damage or destroy archaeological features revealed by the geophysical survey and inferred from the surrounding cropmarks recorded on the South Yorkshire Sites and Monuments Record. These remains were likely to be of Iron Age and Roman date, although other periods may have been present and to represent elements of a wide spread pattern of farming settlement well attested (in terms of cropmark evidence) in the local area. The remains were of local and regional importance. [Au(abr)]

HIGH FISHER GATE, DONCASTER
High Fisher Gate, Doncaster, South Yorkshire - Archaeological Desk-Top Assessment

Ford, L Morley : Archaeological Services WYAS, 2006, 23pp, colour pls, figs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological desk-based assessment concluded that any development would impact significantly on archaeology dating from the prehistoric period onwards. In particular, the known archaeological remains dating to the Roman, Saxon and medieval periods were of local and regional importance. The defences of the Roman fort and Anglo-Saxon burgh were projected to run directly through the proposed development area. The close proximity to the churchyard of St. Mary Magdalene increased the potential for the discovery human burials. [Au(adp)]

BOSTON LODGE FARM, GILMORTON

Desk-based Assessment and Buildings Appraisal at Boston Lodge Farm, Gilmorton, Leicestershire

Soden, I & Butler, A Northampton : Northamptonshire County Council, 2006, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

Prior to the sale of farm buildings at the former Boston Lodge Farm, a desk-based and building assessment was undertaken. Both highlighted a well-preserved small farm of late eighteenth or early nineteenth century date. The buildings assessment identified that the farm buildings had been little added to since they were first set-out although they and the farmhouse had been upgraded as time has gone on. As a principally pastoral farm, those changes probably mirrored the fluctuating fortunes and attitudes to animal husbandry. [Au(adp)]

THE FORMER RAB SITE, EDWARD STREET, SHEFFIELD

Archaeological Desk Based Assessment of the Former RAB Site, Edward Street, Sheffield

Stenton, M Sheffield : ARCUS, 2006, 32pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological desk-based assessment was carried out and revealed that the site was part of the town field, an area of agricultural commons during the post-medieval period. Cartographic evidence suggested that the site was set out for building purposes by 1789 and that development had occurred by 1795. Industrial, retail and domestic premises including St. George's Works and the Lincoln Castle public house occupied the site during the 19th century. The buildings were cleared in the 1930s and it was unknown if the cellarage was infilled. The RAB building did not appear to be a key archaeological, historical or architectural significant building. LAND AT MANCHESTER ROAD, DEEPCAR
Archaeological Desk-based Assessment of Land at Manchester Road, Deepcar, South Yorkshire

Walker, C Northampton : Northamptonshire County Council, 2006, 20pp, figs, tabs, refs
Work undertaken by: Northamptonshire Archaeology

A desk-based assessment was carried out on an area of land measuring approximately 20 hectares to the east of Deepcar. No prehistoric remains were known from within the development area. However, two prehistoric sites of national importance were situated close to the site to the immediate northeast and east. A Mesolithic site was excavated just to the north-east of the site in 1962. The excavation revealed two concentric rings of stone, which were interpreted as a possible structure. A total of 36,000 flint flakes and a large amount of flint tools were also recovered. Adjacent to the eastern boundary of the site was the Scheduled Ancient Monument of Wharnccliffe Quern Workings. Many quern working sites and querns had been identified above and below Wharnccliffe Scar and related to intensive workings that appeared to date from the Iron Age to Roman periods. There was little information regarding the area for the Saxon and medieval periods. The eastern part of the site may have been part of the Wortley Estates in the post-medieval period. By the mid 19th century the northern part of the site was occupied by a chemical works, which was taken over by John Grayson Lowood in c.1860 and became Lowoods Gannister and Brick Works, later General Refractories and latterly RG Stein Brickworks. All the buildings relating to the brickworks had already been demolished. Parts of the site have also been used as landfill by Corus. Most of the eastern site had been heavily disturbed by the brickworks and landfill, and although there may have been islands of undisturbed ground, especially close to the river, these areas being retained as "public open spaces". The small area on the western bank of the River Don had, apart from a pipeline running across it, not been disturbed and the greatest potential for the survival of archaeological remains lay here. Work undertaken by: Northern Archaeological Associates

Nine archaeological sites were identified within 500m of the works, ranging from a possible Roman ford to 19th century field boundaries. The proposed pipeline would cross areas of ridge and furrow cultivation and later field boundaries. A topographic survey and watching brief were recommended to mitigate against impact. [Au(adp)]

SPEN VALLEY, NEAR DEWSBURY
Spen Valley, Near Dewsbury, West Yorkshire. Cultural Heritage Scoping Study

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2006, 17pp, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

There was not thought to be a great deal of impact to the archaeological record, partly due to the pipeline's proposed location within the track bed of a railway. Three short sections of the pipeline would be through farmland, and there was a slight chance of encountering archaeological remains. Monitoring of the groundwork was proposed as mitigation. ECCUP TO EAST RIGTON WATER MAIN
Eccup to East Rigton Water Main West Yorkshire - Desk-based Assessment

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2006, 26pp, colour pls, figs, refs

Work undertaken by: Northern Archaeological Associates

An archaeological desk-based assessment was carried out at the proposed route of a 8.1 km water main and associated infrastructure between Eccup to East Rigton. There was evidence that the course of a Roman road bisected the site and cropmarks indicated the presence of probable later prehistoric or Romano-British settlement activity in at least three locations. The study area was widely settled during the medieval period and substantial settlements were at Wickes, East Keswick and East Rigton. The proposed works would impact upon four recorded sites, including a later Prehistoric or Romano-British

settlement and former field boundaries, extant ridge and furrow and a hollow way dating back to enclosure and possibly originating in the medieval period. Other sites included a later prehistoric or Romano-British settlement identified from cropmarks and surface finds and the site of a possible Roman villa at Biggin Farm. [Au(abr)]

METHLEY QUARRY (EXTENSION TO PHASE 10), METHLEY
Methley Quarry (Extension to Phase 10), Methley, West Yorkshire - an Archaeological Desk Based Assessment

Newton, A A S Hertford : Archaeological Solutions, 2006, 35pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological desk-based assessment found evidence from aerial photography suggesting that the Iron Age/Romano-British field system may have extended into the site. There was also evidence for human occupation of the Methley area in the Mesolithic, Neolithic and Bronze Age periods. Medieval pottery and other material had been found in the vicinity and a known medieval farmstead existed to the south of the site. Medieval and post-medieval field systems and ridge and furrow cultivation was in the vicinity. [Au(adp)]

THE WORKS, HUNSLET, LEEDS

The Works, Hunslet, Leeds, West Yorkshire - Archaeological Desk Based Assessment

Mellor, I York : Field Archaeology Specialists Ltd, 2006, 30pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Field Archaeology Specialists Ltd.

An archaeological desk-based assessment established that the area of the proposed development was dominated by post-medieval period archaeology. Prior to the 18th century, there was little evidence for any activity within the area. Similarly, although some possible evidence for early medieval and

medieval activity was found in the study area, the majority was found to be related to the post-medieval expansion of Leeds with particular emphasis on industry and dock related activity along the banks of the River Aire. [Au(abr)]

WYKE BECK WOODS, ROUNDHAY, LEEDS

Wyke Beck Woods, Roundhay, Leeds. Archaeological desk-based assessment and topographical survey

Archaeological Services WYAS Morley : Archaeological Services WYAS 2006, 46pp, colour pls, figs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological desk-based assessment and topographical survey was carried out at the site as part of a local heritage initiative project. The historic landscape across the study area was largely a product of two separate periods or re-organisation and development. The first came in the 19th century when the area of the medieval deer park was divided and sold off. At this time, the site consisted of large houses and surrounding grounds, which later were built over during the 20th century. [Au(adp)]

NEW WATER PIPELINE, HIGH ACKWORTH, NEAR WAKEFIELD

New Water Pipeline, High Ackworth, Near Wakefield, West Yorkshire. Archaeological Desk-based Appraisal

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2006, 9pp, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The proposed pipeline was thought to be near an area relating to a skirmish fought at Ackworth in 1492, known from local tradition and by place-name evidence as the "Burial Field". Although the

pipeline was not supposed to directly cross this field, a complex of cropmarks may have indicated prehistoric activity such as field systems, enclosures or trackways. A precautionary watching brief was recommended. [Au(adp)]

MITCHELL LAITHES WASTE WATER TREATMENT WORKS, DEWSBURY
Mitchell Laithes Waste Water Treatment Works, Dewsbury, West Yorkshire. Archaeological Appraisal

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates,
2006, 11pp, figs, refs

Work undertaken by: Northern Archaeological Associates

A number of archaeological sites were found within the study area, however, the vast majority of these were far enough away to escape detrimental impact from the development. A ring ditch identified as a cropmark from aerial photographs was the only archaeological feature within the confines of the development site, and was thought to be the remains of a Bronze Age barrow. It was suggested that a walkover survey of the site and a geophysical survey of the ring ditch be carried out in order to assess the possible extent of any archaeological remains. [Au(adp)]

MANOR SCHOOL, YORK
Manor School, York - Archaeological Desk-Based Assessment

Pollington, M Morley : Archaeological Services WYAS, 2006, 23pp, colour pls, figs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological desk-based assessment was carried out at the Manor School site. The study site was enclosed by field boundaries laid out during the late 18th century. There was no archaeological documentary or cartographic evidence for early activity within the area of proposed development. No formal archaeological investigation of this area had previously been undertaken and cartographic sources prior to the mid-19th century were scarce. There was a possibility for the presence of sub-surface archaeology. Analysis of aerial photographs identified extensive evidence of medieval activity and possible Iron Age occupation within the study area and there was potential for the discovery of archaeological deposits of these periods within the area of proposed development. [Au(adp)]
