BEDFORD ROWING LAKE, WILLINGTON***Bedford Rowing Lake, Willington. Archaeological Field Evaluation***

Albion Archaeology Bedford : Albion Archaeology , 2006, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

Fifteen trial trenches, some targeted on cropmarks, were distributed across the site. The confirmed presence of an early prehistoric ring ditch that surrounded a probable prehistoric round barrow on the edge of the south-east side of the evaluation area. However, the majority of features revealed appeared to be associated with post-medieval agriculture and land division, such as the numerous furrows and boundary ditches. Evidence of tree and shrub clearance predating the furrows and boundary ditches was also revealed. [Au(abr)]

GREAT BARFORD FLOOD ATTENUATION SCHEME***Great Barford Flood Attenuation Scheme, Bedfordshire. Archaeological Field Evaluation***

Albion Archaeology Bedford : Albion Archaeology , 2006, 38pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

The evaluation revealed that the northern part of the development area contained significant regionally important remains. These remains were generally well preserved and were likely to represent part of a medieval settlement that had been identified through excavation immediately to the north of the development area. A further concentration consisted of possible enclosure and boundary ditches and pits that contained material of Roman date. The remains of the trenches contained linear features which formed part of a medieval or post-medieval field system. No significant remains were found in the southern area. [Au(abr)]

LAND OFF ALBANY ROAD, BEDFORD

Land off Albany Road, Bedford. Archaeological Field Evaluation

Archer, J Bedford : Albion Archaeology, 2006, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

Four trial trenches were evenly distributed across the site. These enabled a full assessment of the potential for surviving remains associated with historical Bedford, in particular activities outside the town limits and next to the river frontage. No remains dating from before the 19th century were found, confirming that the site lay outside the historic core of the town. The earliest feature was an east-west ditch, which corresponded with a boundary on the 1884 1st edition Ordnance Survey map. It formed the southern boundary of a square enclosure fronting onto Albany Road. The ditch was sealed by a thick dump of orange clay and silt, which was recorded in all four trenches and overlaid the original land surface. This material was not derived from local sources and was therefore likely to have been brought in during building activity along Albany Road around 1900. It probably represented an attempt to raise the ground level to prevent flooding of the new houses. Evidence for modern, small-scale gravel extraction was identified in the form of a possible quarry pit, which was cut through the levelling layer. [Au(abr)]

RIVERSIDE SQUARE, BEDFORD

Riverside Square, Bedford, Bedfordshire. Archaeological Evaluation Report

Oxford Archaeology Oxford : Oxford Archaeology, 2006, 27pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The evaluation revealed river terrace gravel across the site. Medieval cultivation or garden soils were seen across the site. Post-medieval post holes/pits, a soakaway and a possible beam slot indicated the presence of a property fronting Horne Lane; a post-medieval boundary ditch was seen to the east of the property. The concrete and brick foundations of the 19th century house were exposed. A large undated gravel quarry was excavated. [Au(abr)]

LAND OFF NORSE ROAD, BEDFORD

Land Off Norse Road, Bedford. Archaeological Field Evaluation

Albion Archaeology Bedford : Albion Archaeology , 2006, 51pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

The evaluation revealed archaeological remains of early-middle Iron Age, Roman and medieval periods. The medieval remains consisted of furrows, widely distributed across the development area. The evidence for activity in the Roman period comprised two parallel ditches and a possible hearth, which contained large amounts of fired clay and charcoal. The most significant archaeological remains were those dating from the early-middle Iron Age period. These were located along the eastern edge of the south field. They represented the remains of a small rural farmstead situated within ditched enclosures. The ditches corresponded to those identified by the geophysical survey. [Au(abr)]

A421 Improvements: M1 Junction 13 To Bedford. Archaeological Trial Trenching

Barker, B Bedford : Albion Archaeology , 2006, 54pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

The trial trenching was designed to assess the reliability of results from previous assessment works and to provide additional information on date, nature and preservation. Six trial trenches, totalling 600 square metres, were targeted on ditch- and pit-type geophysical anomalies. Trenches 5 and 6 (north of Brogborough)- archaeological features, including a possible roundhouse, and artefacts were located suggestive of a farmstead which may have originated in the late Iron Age, but continued to function into the Roman period. Rural settlements such as this had the potential to address a number of national and regional research objectives. Trench 4 (north west of Brogborough) revealed archaeological features and artefacts that were located suggestive of a field system which may have originated in the Late Iron Age. Field systems were an understudied element of the archaeological record which had the potential to address national and regional research objectives. In addition, the existence of a field system was strongly suggestive of nearby rural settlement. A contemporary farmstead was identified in Trenches 5 and 6, approximately 350m away. However, known settlement patterns in Bedfordshire and the absence of significant geophysical anomalies between this farmstead and the field system suggested that a second farmstead, not necessarily within the road corridor, may have existed in the vicinity of Trench 4. Trench 8 (south-west of Marston Moretaine) contained archaeological features indicating evidence for quarrying which may have dated to the early Roman period. Although such features had not been specifically referred to in national and regional research agendas, they did have the potential to address objectives relating to the rural landscape. [Au(abr)]

GALLEY HILL HILLFORT, SANDY*Galley Hill Hillfort, Sandy, Bedfordshire. Archaeological Field Evaluation*

Abrams, J Bedford : Albion Archaeology, 2006, 63pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

The evaluation was successful in significantly augmenting knowledge and understanding of the use of Galley Hill, both before and after construction of the hillfort. Trench 1 successfully identified the entrance. It was located in the northern perimeter of the monument. The entrance was c.3m wide and therefore would have allowed the passage of pedestrians and carts. The remains of a ditch, bank and associated pit and post holes were recorded in Trench 2. The ditch was aligned north-west to south-east, the pit and post holes north-east to south-west. These not only demonstrated the excellent standard of preservation within the monument, they also suggested that evidence of internal sub-divisions, possible entrance ways and structural remains, were preserved within the interior of the monument. The borehole survey successfully identified the existence of a large cut feature in the location predicted by the earlier earthwork survey. Further investigation of these remains would be of enormous interest given their relatively early date, and the role they must have played in the origins and development of the main hillfort. The investigation confirmed that Galley Hill contained well preserved, securely dated archaeological remains of local, regional and national interest. No well preserved environmental remains were identified within the monument but it was thought that more extensive investigation may redress this. [Au(abr)]

LEIGHTON BUZZARD FLOOD ALLEVIATION SCHEME

Leighton Buzzard Flood Alleviation Scheme, Bedfordshire. Archaeological Field Evaluation

Phillips, M & Mordue, J Bedford : Albion Archaeology , 2006, 63pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

The trial trenching demonstrated that a complex of enclosures identified by geophysical survey in the Eastern Arm, on the north bank of the Clipstone Brook, represented an enclosed rural settlement of the late Iron Age and Roman periods. Remains were generally well preserved beneath a deep layer of overburden. The sample excavation produced a significant artefact assemblage and demonstrated the potential for the recovery of ecofactual evidence. Other evidence of activity in the Roman period consisted of a single ditch which contained pottery and animal bone. Other features found across the study area consisted of furrows and earthworks formed by medieval strip cultivation and a number of narrow ditches. These ditches contained few dateable artefacts and no relationships to the furrows could be determined. However, in plan, they appeared to respect the pattern of the medieval field system, with the ditches running parallel to furrows or along headlands. One possible enclosure formed by these ditches lied on the same axis as adjacent furrows. [Au(abr)]

LAND AT POTENTIAL DEVELOPMENT AREA H17, SOUTHERN LEIGHTON BUZZARD

Land at Potential Development Area H17, Southern Leighton Buzzard, Bedfordshire. Archaeological Field Evaluation

Preece, T Bedford : Albion Archaeology , 2006, 74pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

The evaluation revealed a clearly defined area of archaeological remains within the central part of the development area. These were first identified during the geophysical survey. Trial excavation confirmed that the identified anomalies were of archaeological origin. No archaeological features were

identified in either the western or eastern areas. Trial trenching demonstrated that anomalies detected by the geophysical survey in these areas were either geological or modern in origin. However, the complete absence of any features in Trenches 12 to 21, where the underlying geological strata were dominated by clay, was significant in its own right. It suggested that the presence or absence of archaeological remains was partly influenced by the underlying geological deposits. A cluster of Roman pottery sherds were recovered from a natural depression in the eastern area. These were abraded, and were not thought to be indicative of significant Roman activity within the vicinity. It was interesting to note that sherds of similar date had previously been discovered within the development area. The remains uncovered in the central area represented part of an extensive field system. The recovered dateable artefactual material comprised a mixture of late Bronze Age/early Iron Age and early Iron Age pottery. No artefacts of later date were recovered from the ditches making up the field system. [Au(adp)]

34-38 Newnham Road, Cambridge. An Archaeological Evaluation

Hutton, J & Timberlake, S Cambridge : Cambridge Archaeological Unit, 2006, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridge Archaeological Unit

Two archaeological test pits were excavated within the yard area to the rear of the building, whilst two previously dug engineering pits were examined and recorded within its interior. Archaeological features, perhaps different parts of the same large pit, were identified, within each of the two test pits in the yard. Within the pit were found large amounts of burnt sedge fuel and charred cereal threshing, the latter perhaps the discarded contents of medieval bread ovens. The infilling of this feature from the north-east suggested that occupation refuse was then coming from an area of settlement from the current Malting Lane and Newnham House, formerly the location of Mortimer Manor and associated medieval tenancies. Beneath the foundations of the currently standing 19th century buildings, two engineering test pits revealed the brick footings for what were probably once 17th century dwellings. [Au(abr)]

Woolhouse, T, Ginns, A Williamson, I & Williams, J Hertford : Archaeological Solutions, 2006, 57pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation revealed a stratigraphic sequence comprising medieval and post-medieval soil horizons sealed beneath a later sequence of deposits across the site. Four phases of pitting were identified, the first of which was an undated pit sealed by a medieval soil horizon. The remaining were post-medieval in date. A Victorian boundary ditch and a manhole were also present. [Au(abr)]

Work undertaken by: Cambridgeshire Archaeology

Two evaluation trenches were excavated. Two features were recorded; a shallow Roman pit and a field drain aligned east to west. Dateable artefactual material was recovered from the topsoil- this consisted of a few very heavily abraded Romano-British pottery sherds and a few fragments of 19th/10th century material including clay pipe and pottery. Artefacts were also retrieved from the subsoil and from the pit, dating it to the 2nd-4th centuries AD. [Au(abr)]

Land North of School Road, Saxon Street, Woodditton, Cambridgeshire: an Archaeological Evaluation

Wooldhouse, T, Munding, A, McConnell, D Hertford : Archaeological Solutions, 2006, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation revealed parallel linear ditches running obliquely to the contours of the site. Struck flint was found in one of these ditches. The finds were not surprising given the known prehistoric activity in the area and in particular a ploughed-out round barrow was recorded close to these trenches. It was possible that this represented activity along the line of the trackway traversing part of this field to the south, with which they ran parallel. Sparse evidence of late Iron Age activity was identified, with abraded pottery sherds of this date from two intercutting pits. Two separate ditches produced abraded Roman pottery sherds and abraded pottery sherds of possible Bronze Age date were recovered from a pit. These finds were generally from dispersed areas of the large site. A pit/ditch terminal and a small gully dating to the Saxo-Norman period were recorded on the western side of the site. The pit contained deposits of animal bone with reasonably preserved sherds of pottery. A large solution hollow and a large dewpond were recorded, as were a series of post-medieval ditches, two of which contained abraded residual pottery. A small number of features contained abraded pottery sherds of possible Bronze Age, Iron Age and Roman date. [Au(abr)]

OLD ESTATE YARD, OVER END, ELTON***Archaeological Recording and Evaluation In the Old Estate Yard, Over End***

Carlyle, S Northampton : Northamptonshire County Council, 2006, 21pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Northamptonshire Archaeology

An evaluation found archaeological remains, probably dating to the medieval period. These comprised a probable boundary ditch, two smaller ditches following the curving embankment of a hollow way, two pits or small ditch terminals and a possible pit or tree throw scar. A junction between two ditches in the north-west corner of the site probably dated to the late medieval or early post-medieval period, although this feature had been extensively truncated by modern services and groundwork. Other activity on the site dated to the 19th and 20th centuries. A large pit containing iron working slag may have been associated with the activities of James Hayes, inventor of the mechanical straw elevator, who worked out of the workshops in the yard in the 19th century. Doyle, K & Trott, K Hertford : Archaeological Solutions, 2006, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The current investigations found evidence for three phases of activity. The earliest phase, dating to the 10th-11th centuries, was represented by two pits sealed by a 15th-16th century ploughsoil. Phase 2 comprised a post hole and brick culvert aligned north-south, Phase 3 features consisted of ten north-west by south-east aligned gullies which contained 95kg of animal bone associated with tannery waste. The re-cut of the medieval moat was filled with Phase 3 domestic rubbish and several garden soils were recorded. The concentration of Phase 3 features may have related to the landscaping of the ground around Grove House by their own Lancelot 'Capability' Brown. [Au(abr)]

THE GRAND, GREAT WHYTE, RAMSEY***Late Medieval/Early Post-medieval Remains at the Grand, Great Whyte, Ramsey: Archaeological Evaluation***

Hickling, s Castle Hill : Cambridgeshire Archaeology, 2006, 14pp, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

Evidence of late medieval or early post-medieval occupation was found fronting onto the Great Whyte in the form of masonry. Post-medieval dumping of material in Trench 2 was probably connected with land reclamation, while in Trench 3 evidence suggested that the area remained wet until the modern period. It was thought likely that archaeological evidence relating to medieval occupation would be confined to the western portion of the site, fronting onto the Great Whyte. [Au(abr)]

THE RIVERSIDE SITE, THE BARBRAHAM INSTITUTE

The Riverside Site, the Barbraham Institute, Cambridgeshire: an Archaeological Evaluation

Timberlake, S & Armour, N Cambridge : Cambridge Archaeological Unit, 2006, 48pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridge Archaeological Unit

An archaeological trench evaluation revealed evidence for Neolithic and Neolithic/Early Bronze Age flint working associated with redeposited remains of possible burnt flint mounds. Roman occupation of this part of the flood-plain was evidenced from a series of north-west to south-east curvilinear ditches and, slightly further away, another ditch. Adjacent to this were found daub filled beam slots. Evidence suggested that the area was abandoned in the late 2nd century. A group of post-medieval banks and ditches were encountered. [Au(abr)]

BARRINGTON CEMENT QUARRY

Barrington Cement Quarry, Cambridgeshire. Archaeological Evaluation below Barrington Ridge

Dickens, A, Knight, M & Appleby, G Cambridge : Cambridge Archaeological Unit, 2006, 202pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridge Archaeological Unit

During an evaluation, large quantities of artefacts, particularly Iron Age pottery, were recovered. Radiocarbon dating tentatively placed an important group of features, including a rectangular enclosure and pit group, in the Middle Bronze Age with two ring ditches apparently being earlier (although the artefacts from the rectangular enclosure and pit group may alternatively have suggested an Early Bronze Age date). The Iron Age artefacts functioned between 50BC and 70AD with the Roman site having its origins in the Flavian period, after c.69AD. Collectively, the orientation and alignment of the prehistoric sites may have suggested a zone of early landscape clearance and communication running north-west to south-east through the central area of the evaluation site. Despite clear indications of remnant ridge and furrow in both the aerial photography and geophysical surveys, this survived poorly below the ground. There was no evidence of Anglo-Saxon activity. Post-medieval Ditches at Home Farm, High Ditch Road, Fen Ditton, Cambridgeshire: Evaluation

Kenney, S Castle Hill : Cambridgeshire Archaeology, 2006, 15pp, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

An archaeological evaluation revealed several phases of ditch running south of and parallel with a scarp crossing the site on an east to west orientation. The ridge had previously been thought to represent the line of the supposed northern section of Fleam Dyke (an Anglo-Saxon earthwork). Finds recovered from the lower fills of the major ditches in Trenches 1 and 4 were dated to the mid to late 18th century and no earlier material was residual within those deposits. Trench 1 also contained pits that may have been earlier in date. No archaeological features were encountered in trenches 2 and 3. [Au(abr)]

MOORLANDS RESIDENTIAL CAR HOME, THE MOOR, MELBOURNE

Moorlands Residential Car Home, the Moor, Melbourn, Cambridgeshire: Evaluation

Bishop, B London : Pre-Construct Archaeology Ltd, 2007, 38pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

Nine evaluation trenches were machine excavated in the areas affected by the proposed development. Natural deposits were identified in every trench. Twenty-nine features were identified, all cutting into the natural deposits. They consisted of naturally formed features (such as tree-throws, hollows/disturbance), undated pits and linear features and post-medieval pits, ditches and a possible drainage channel. [Au(abr)]

WEST WAY/WHADDON ROAD, MELDRETH

West Way/Whaddon Road, Meldreth, Cambridgeshire: an Archaeological Evaluation

Hogan, S, Ginns, A & Mundin, A Hertford : Archaeological Solutions, 2006, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

A number of features were investigated during the evaluation, particularly in the northeastern part of the site, though the paucity of finds evidence made interpretation difficult. The largest feature on the site was the possible pond/quarry pit in trench 2. The features cut the subsoil and were probably relatively recent in date, though precise dating evidence was sparse. A ditch also cut the subsoil. Another field boundary ditch was also investigated. Small undated pits were recorded during the evaluation and their purpose remained unclear. [Au(abr)]

Early and Middle Saxon Remains at Queens Way, Oakington, Cambridgeshire

Jones, M & Mortimer, R Castle Hill : Cambridgeshire Archaeology, 2006, 41pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

Four evaluation trenches were excavated in an area of known archaeological remains. Archaeological features were identified in each trench, consisting of ditches, post holes, buried soils and burials. Pottery was recovered from the majority of features excavated, though in small quantities, and indicated that the archaeological activity was mainly Middle Saxon with some potentially Roman/Early Saxon and 12th century activity. A series of northeast to south-west boundary ditches appeared to post-date the 6th century Anglo-Saxon cemetery to the west and there were large, deep boundary or enclosure ditches to the east. An Archaeological Evaluation at Papworth Everard Business Park, Plots 7, 9 and 10, Cambridgeshire

Fisher, I Northampton : Northamptonshire County Council, 2006, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

A series of trial trenches were excavated on land to the southeast of Papworth Everard. A number of ditches and shallow gullies, sealed by topsoil, were found in six of the trenches. Pottery recovered from four of the trenches dated from the Late Iron Age (first century BC) through to the early Roman period (first half of the early second century AD). Medieval ridge and furrow cultivation was also identified as well as modern disturbances, the result of dumping on the site. [Au(adp)]

SAWSTON HALL, SAWSTON

Multi-period Remains at Sawston Hall, Sawston, Cambridgeshire

Mortimer, R Castle Hill : Cambridgeshire Archaeology, 2006, 45pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

An archaeological evaluation took place on land affected by the development to refurbish Sawston Hall as a hotel. The archaeological remains found within the trenches represented four main periods: Neolithic/Bronze Age, Late Iron Age/early Roman, earlier medieval and late medieval/post-medieval. Upstanding remains from the 1940s wartime occupation of the Hall were also recorded. The prehistoric archaeology was finds related, comprising a relatively large worked and burnt flint assemblage recovered residually within later features. The very late Iron Age and Roman material was found in Trench 4, dated the occupation to a very limited period in the middle of the 1st century AD. The principle prehistoric and early Roman feature recorded was a wide channel, possibly draining from a well or spring. In the area of this channel were two contemporary wells or shafts, a ditch and a post hole. The earlier medieval archaeology consisted of ditches recorded in all four trenches. Little later or post-medieval archaeology was recorded, other than the upper infilling of the moat and of a ditch. [Au(abr)]

Clarke, R Castle Hill : Cambridgeshire Archaeology, 2006, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

During an archaeological evaluation, a buried soil of probable prehistoric date was the earliest deposit encountered; this produced a small quantity of calcined bone, three conjoining sherds of Bronze Age or Early Iron Age pottery and a few charred seeds. Medieval activity was represented by a pit of 12th-14th century date; the remaining features and deposits comprised 16th-20th century pits and layers located across the trench. The interpretation of these features was not clear, although a 19th century pit identified at the western end of the trench may have been a cesspit or well. A sample from one of the post-medieval pits was largely composed of humic matter, including leaves, twigs and roots, indicative of pit composting. [Au(abr)]

LAND OFF BURES ROAD, GREAT CORNARD***Archaeological Evaluation Report - Land off Bures Road, Great Cornard***

Gill, D Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 26pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation was carried out in advance of housing development and the relocation of the rugby ground on land off Bures Road. Located on the site of the rugby ground were two burial mounds of prehistoric date. The evaluation identified a concentration of features including the corner of an enclosure ditch, a linear ditch and a group of pits in close proximity to each other, suggesting a focus of activity to the north of the sample area with a low density of dispersed small pits beyond that. Flint and quartz sand-tempered pottery and struck flint suggested an Early Bronze Age date for the features and a presence on the site from the Palaeolithic period. [Au(abr)]

Priestley-Bell, G Ditchling : Archaeology South-East, 2006, 22pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

Two trial trenches were mechanically excavated. The work revealed an apparently extensive area of hard standing that perhaps represented a mid 15th- to mid 16th-century hard to aid the beaching of boats. A ditch or channel of similar date was also recorded. A possibly late 17th-century metalled roadway was later established on the postulated hard. Extensive overlying deposits represented successive operations, from perhaps the late 17th century onwards, to raise the ground surface, probably in response to flooding by the Benfleet Channel. WICK FARM, WICK LANE, ARDLEIGH

Wick Farm, Wick Lane, Ardleigh, Essex. Archaeological Trial Trenching

Germany, M Chelmsford : Essex County Council Field Archaeology Unit, 2006, 65pp, colour pls, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

Evaluation in response to proposals for a reservoir extension revealed the presence of five Iron Age sites as well as more recent features that appeared to be associated with the early development of the extant field pattern. The Iron Age sites were thought to be the remains of enclosed and unenclosed farmsteads. They differed in age and location and suggested an expanding and shifting pattern of settlement beginning in the early Iron Age and carrying on until the late 1st-early 2nd century AD. The most notable site was late Iron Age and comprised a number of round houses as well as a Dshaped

enclosure. Some of the late Iron Age ditches contained evidence for domestic settlement, such as loom weights and charcoal. A newly discovered trackway was potentially significant, implying that the field system recorded at the site may have been medieval in origin. Post-medieval field ditches and trackways lay dispersed across the development area. [Au(adp)]

THE WEST CLACTON RESERVOIR AND PUMPING STATION, GREAT BENTLEY

An Archaeological Evaluation at the Site of the West Clacton Reservoir and Pumping Station, Great Bentley, Essex

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 14pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An evaluation revealed an area representing occupation from the middle Iron Age to Roman period, though not necessarily continuous. This was probably marginal to cropmark sites to the east and west. A later field system defined by medieval and post-medieval ditches was laid out on the site. There was no strong evidence for settlement here, indeed it was believed that the origins for both the finds and the ditches lay to the west and north of the site. [Au(adp)]

Letch, A Chelmsford : Essex County Council Field Archaeology Unit, 2006, 38pp, colour pls, figs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

Documentary sources confirm that Wickham Hall dated back to at least 1487 and the extant farmhouse may have lain on the site of a late medieval hall. Two trenches showed a build-up of subsoil above the natural gravels, while a third trench suggested parts of the central area of the farm may have been levelled quite recently with clay. [Au(abr)]

Pocock, M Chelmsford : Essex County Council Field Archaeology Unit, 2006, 25pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

An evaluation carried out on the site of a residential development revealed significant late medieval and post-medieval features in the south and south-west of the site. These comprised a well, pits and a large ditch near the road frontage. Further investigation of these features revealed that the well was dated to the mid-13th/14th century, and was cut by a large boundary ditch and associated rubbish pits

all dating to the 15th to 16th/17th centuries. This area of activity was mitigated by the archaeological work, and remains should have survived outside of the development's footprint. [Au(adp)]

LAND BETWEEN 23 NORTH STREET AND BASBOW LANE, BISHOP'S STORTFORD

Land Between 23 North Street and Basbow Lane, Bishop's Stortford, Hertfordshire. An Archaeological Trial Trench Evaluation

Ilsou, P & Williams, J Hertford : Archaeological Solutions, 2006, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation revealed activity of late post-medieval and modern date. Trench 2 was dominated by small features and the remnant of a possible path. Small post holes were possibly associated with the backyard of an early 19th century structure fronting Basbow Lane. A small structure was indeed shown on the 1898 OS map to the east of the timber-framed structure fronting Basbow Lane that still survived. Abraded pottery sherds of a general 17th/18th century date were recovered from the post holes in Trench 2, indicative of activity in the vicinity at this time. A brick structure in Trench 1 was probably a small cellar, possibly associated with the slaughterhouse which was believed to have formerly stood on the adjacent plot. [Au(abr)]

Seven House Terrace, R/O 43-47 High Street, Ware, Hertfordshire. A Historic Map Regression and Site Specific Impact Assessment

Williams, J Hertford : Archaeological Solutions, 2006, 20pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The site lay within the limits of the Iron Age, medieval and post-medieval settlements at Ware. Geotechnical investigations showed that there was between 2m and 2.8m of made ground on the site, with up to 2m of alluvium in the northern half. The made ground was likely to have been laid to raise the ground level and protect the site from flooding. Nonetheless, archaeological remains may have been truncated by the malting building and subsequent industrial unit. [Au(abr)]

LAND AT NORTH VIEW DRIVE, WHISSONETT

An Archaeological Evaluation on Land at North View Drive, Whissonett, Norfolk

Trimble, G L Norwich : NAU Archaeology , 2006, 32pp, colour pls, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

The site was situated on an area of known Anglo-Saxon activity, and features from this period were encountered. These included field boundary or stockade ditches and the line of a double-ditched enclosure. A number of post holes, a possible beam slot and a partially exposed Sunken Featured Building were also recorded. The site was judged to be an important resource for the understanding of Anglo-Saxon studies in the area. [Au(adp)]

PASTON RESERVE DEVELOPMENT AREA, PETERBOROUGH*Archaeological Evaluation, Paston Reserve Development Area, Peterborough*

Foard-Colby, A Northampton : Northamptonshire County Council, 2006, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological evaluation was carried out on land proposed for housing at Paston Reserve Development Area, Peterborough. Seven trenches were opened, and two contained single ditches. One sherd of Roman colour-coated ware, together with a small amount of animal bone, was recovered from one ditch, while a residual probable Roman tile fragment came from the other. Two fragments of 16th/17th century stone moulding were recovered from a post hole and may have been associated with a former manor house nearby. Trenches close to Car Dyke revealed a possible buried soil horizon which may have been sealed by upcast from the dyke, although no good dating evidence was present. [Au(adp)]

LAND ADJACENT TO 255 VICTORIA AVENUE

Land Adjacent to 255 Victoria Avenue, Southend-On-Sea. Archaeological Evaluation by Trial Trenching

Pocock, M Chelmsford : Essex County Council Field Archaeology Unit, 2006, 30pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

A single trial trench was opened to the south of No 255, a restored medieval timber-framed house dating to the early 15th century. A flint tool of Mesolithic to Neolithic/early Bronze Age and a Roman coin were recovered as residual finds in medieval deposits. No evidence of a supposed extension to the house was encountered. Archaeological Evaluation Report - the Driftway, Capel St Mary

Meredith, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 20pp, figs, tabs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation revealed evidence for prehistoric, Roman and post-medieval use of the site. The prehistoric system of ditches were likely to be of Iron Age date and were on a separate alignment from those of the Roman period. The Roman phase of use was represented by another series of parallel ditches, perhaps indicating expansion or contraction of fields or other boundaries. Between the laying down of the prehistoric and Roman features, a thick deposit of silty subsoil had accumulated within the south-western corner of the site. This was probably due to down slope soil creep filling a slight dip or depression. A small concentration of post holes within the north-eastern corner of the site were likely to be of post-medieval date. [Au(adp)]

Suffolk County Council Archaeological Service Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 17pp, colour pls, figs, tabs

Work undertaken by: Suffolk County Council Archaeological Service

A metal detectorist had located a hoard of metal work and a total of eleven pieces had already been removed by the metal detectorist and the landowner. Due to failing light it was decided to leave the objects until they can be excavated under controlled conditions. An area of ploughsoil was excavated around the feature and finds 1mx1m. Underneath the metal objects a fibrous layer of organic material which might have been a leather bag or container for the objects was recorded and sampled. [Au(adp)]

Craven, J A Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 29pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation consisted of a desk-based assessment, topographic survey and trial trenching prior to development. The documentary survey confirmed the location of an earlier hall probably within the moated enclosure that was indicated on the first edition OS map. This early hall was replaced in the 1830s by the current house contrary to its Grade II Listing & having 16th -17th century origins. Trenching identified foundations for a small range of 19th century outbuildings to the current hall and a large undated feature that may have been part of a former pond. No deposits relating to the earlier hall were seen. [Au(adp)]

Craven, JA Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 18pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation confirmed the presence of a substantial boundary ditch on the county border between Norfolk and Suffolk. The ditch was recut several times gradually shifting several meters to the north with the final phase closely matching the modern boundary. Final stages of infilling seem to have occurred in the late medieval to post-medieval period. But material dating evidence was limited. By the 19th century only a belt of trees and possible fenceline marked the boundary. [Au(adp)]

Archaeological evaluation report - Liberty Village, Phase 2, RAF Lakenheath

Caruth, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 25pp, pls, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation of the second stage of reconstruction at Liberty Village, RAF Lakenheath, demonstrated a landscape with little evidence of human occupation. Some truncation due to house building in the 1960s was indicated but it was suggested that some evidence of occupation might survive. Only two features were identified, these were an east-west aligned ditch which probably was part of a field system and trackway identified in Phase 1 of the excavation, and a possible curving bank at the southern edge of development.  Craven, J A Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 51pp, colour pls, figa, tabs, refs
Work undertaken by: Suffolk County Council Archaeological Service
 An evaluation and watching brief were carried out on the site in advance of housing development. The bulk of the site did not contain any archaeological deposits and had evidently been open land until

being covered by a modern clay dump. The remainder of the site had formerly been occupied by a 19th century yard and bottle kiln bordered by three ranges of buildings. Fieldwork identified traces of the 19th century buildings but showed the bottle kiln been wholly removed. Two previously unknown structures were located, the first being the possible base for a 19th century in situ kiln. The second structure, a quadrant of a circular brick pad, was of unknown function and date. The main area identified the flues of the drying floor connected to the still standing down draught kiln and chimney constructed in 1940/41. following the fire in 1963 these flues were infilled and covered by the new factory concrete floor, also preserved in situ. HARDWICK ESTATE, BURY ST. EDMUNDS

Hardwick Estate, Bury St. Edmunds, Suffolk - Archaeological Evaluation Phases 1,2 & 3

Brogan, G & McConnell, D Hertford : Archaeological Solutions, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation commenced through 2006 to 2007 and consisted of three phases. These three phases of trial trenching revealed little archaeological evidence. Modern truncation had not affected the far eastern and western sectors of the site. Conversely the southern and northern areas appeared to have suffered from modern truncation. [Au(adp)]

SITES B & B1, SUFFOLK BUSINESS PARK, BEDINGFIELD WAY, BURY ST. EDMUNDS*Site B, Suffolk Business Park, Bedingfield Way, Bury St. Edmunds and Site B1, Suffolk Business Park, Bedingfield Way, Bury St. Edmunds*

Duffy, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 29pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation was undertaken across two development sites, Sites B and B1, at Suffolk Business Park, Bedingfield Way. The evaluation was located near areas of dispersed prehistoric occupation and to the east of the medieval grange, Eldohouse Farm. A total of nineteen trenches were excavated which produced evidence of a heavily disturbed landscape. Three undated charcoal filled pits were identified, similar to others identified in the vicinity, and were thought to be associated with the former airfield and were possibly the remains of fog lifters. Duffy, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 18pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation consisted of six trenches and the results showed that the site had been extensively quarried for sand and gravel in the post-medieval period and then re-instated in the mid to late 19th century for use as a rail siding, warehouse and coal yard. A maltings was also constructed along the southern limit of the site at this time. Little archaeological evidence remained though structural evidence of a possible warehouse and of maltings was identified. [Au(adp)]

FORMER SITE OF DIRECT FOODS LTD, LAMDIN ROAD, BURY ST. EDMUNDS*Archaeological evaluation report - former site of Direct Foods Ltd, Lamdin Road, Bury St. Edmunds*

Duffy, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 17pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation consisted of a total of 9 trenches and identified a high level of disturbance and truncation across the site with the only surviving archaeological deposits in the northern corner. The preserved archaeological deposits were a sequence of accumulation layers identified 1.6m below the present ground surface, probably from within a ditch or pond. However, limited excavation made interpretation very difficult. [Au(adp)]

Gardner, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 20pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

A trial trench evaluation was carried out at the site in advance of commercial development. Fifty-two trenches (total area 5929 square metres) were excavated, covering just over 4% of the site. Very few archaeological features were recorded: just 15 linear features and four pits. Of these nine produced dateable finds and only three of these were earlier than post-medieval in date. No particular concentration of features was recorded, although two of the three earlier features were found in adjacent trenches on the high ground in the south-eastern part of the site. A small area was recommended for further work in the form of monitoring of soil stripping. [Au(adp)]

Craven, JA Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 30pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation identified a phase of prehistoric occupation, consisting of isolated pits and a system of parallel ditches dating to the Late Bronze Age or Iron Age periods. The sparse scatter of features and limited amount of material finds which, while not indicating a high level of activity, also meant that the exact date and function of these features was unclear. Archaeological Assessment Report Lawney's Farm, Rougham. A Report on the Archaeological Investigation

Gill, D Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 4pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

A dwarf wall constructed in two phases of bonded flint and 17th century brick, was found during trenching at Lawney's Farm, Rougham. The farmhouse was a 16th century timber-framed building within a once moated enclosure, the wall was evidence of the former gable end and demonstrated that the end bay of the building had been removed. Only the bottom two courses of flint survived and nothing of the internal floor surfaces remained. [Au]

Kirton Lodge, Proposed Farm Reservoir

Meredith, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 34pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation revealed a high concentration of features within the north-west corner of the site. Some of these were likely to be of prehistoric date with some features containing pottery of the early Bronze Age (2,300-1,500BC). Although a hearth and possible structural remains suggested settlement, the presence of urn fragments within the pottery assemblage might point to a funerary use of the site. Outside the main concentration, some isolated archaeological remains were identified. A Bronze Age pit was recognised in the south-east corner of the site. Three sections of ditch, one prehistoric, one medieval and one undated ran along the site's eastern edge. Drains (19th-20th century), some containing ceramic pipes, were laid out across the southern edge of the site where the soil comprised far heavier clay. [Au(adp)]

Boulter, S Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 22pp,
colour pls, figs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation identified the standing building as a former cowshed of 18th/19th century date, further extending in use as garages during the 20th century. Test pits beside the walls revealed that they did not continue significantly below the existing ground surface and were not found to be sitting on any contemporary footing. On that basis they were considered to represent the slightest remains of walls that once formed part of the inner bailey wall. [Au(adp)]

The Barn, Wash Lane, South Elmham St. Margarets - Record of an archaeological Evaluation

Boulter, S Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 26pp,
colour pls, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The evaluation consisted of a desk-top and field surveys. The evidence of the evaluation has helped to assess the archaeological potential of two key areas where the proposed development would have the most significant archaeological implications, these being the clay platform with its associated building and the standing barns. The moat itself was probably earlier in date than the building itself. The trenches excavated within the building identified that the existing floor level within the small central room on the northern side of the barn was artificially raised from a similar level to that of the other sections of the barn. The known building and existing barns were targeted, however it was possible that unknown archaeology may have existed. [Au(adp)]
