**ST HELENS STREET*****Evaluation Excavations at St. Helen's Street, Derby. A Brief Interim Statement***

Sheppard, D Nottingham : Trent &amp; Peak Archaeological Unit, 2006, 6pp, colour pls, figs

*Work undertaken by:* Trent & Peak Archaeological Unit

A number of archaeological evaluation trenches were excavated at a proposed development site on the north side of St. Helen's Street. Five trenches were cut by hand and features revealed were sampled for evidence. Although was only possible to conduct this evaluation within part of the overall development site because of the continued presence of buildings, the area looked at provided evidence for the ground surface having been truncated down to the natural clay. There was little evidence for medieval features having been present. That found within Trench 4 may have represented a former boundary as its position corresponded with a north-south boundary shown on Speed's 17th century map. The main other finds were those related to lime burning, with a suggestion that this may have dated to before the area was occupied by large houses and their gardens, such as the second St. Helen's House in the 19th century. Earlier maps provided no hint that this may have been occurring. Apart from this, the main evidence was that of later industrial use of the site. Overall, although the site had been heavily reduced in level, there were sufficient features still present cutting through the clay natural which provided evidence of long industrial use of the site. Lewis, B Nottingham : Trent &amp; Peak Archaeological Unit, 2006, 15pp, colour pls, figs, refs

*Work undertaken by:* Trent & Peak Archaeological Unit

A series of four hand-excavated 1m test pits, a site survey and a grave monument survey were carried out ahead of a planning application by St. Swithun's Church to build an extended vestry and church hall on the north side of St. Swithun's. The site survey revealed no features within the building footprint that may have related to the earlier history of St. Swithun's Church. Grave-cuts were identified in all four test pits, largely cut into disturbed ground, indicating 19th-20th century burials below a depth of 1.2m. Although no human remains were found in the course of the excavation, a coffin was identified in test pit 02. The grave monument survey noted 26 headstones within and a further 9 close to, the footprint of the proposed building, dating from 1810 to 1921 (with a later interment dating to 1941). At least two of these (1 & 7) may have had associated substantial brick burial shafts below ground that would have impacted upon the development. These remains could have provided a significant funerary evidence including monument construction and coffin furniture. [Au(adp)]

Colls, K Birmingham : Birmingham Archaeology, 2006, 6pp, figs, refs

*Work undertaken by:* Birmingham Archaeology

The evaluation proved successful in characterising the archaeological remains across the site. Two archaeological features were identified, although both were truncated by modern services. The natural geology was identified throughout the trench at a depth of 0.20m below the ground level. One small ditch and the truncated remains of a cobbled surface were revealed cutting the natural geology. These features could not be directly linked to the Scheduled Monument immediately to the south, although it was possible that they may have been associated with garden features or out-buildings contemporary with Bretby Castle which were extant on the site prior to the construction of Castlefields Mount. #### *Archaeological Trial Trench Evaluation at the Riverside Nursery, Market Harborough, Leicestershire*

Brown, J Northampton : Northamptonshire County Council, 2006, 11pp, colour pls, figs, tabs, refs

*Work undertaken by:* Northamptonshire Archaeology

Trial excavation in the area of the proposed development at Riverside Nursery, Market Harborough, established a general absence of archaeological deposits. The surface of the natural substrate, identified in each trench, had been cut by medieval or post-medieval ridge and furrow and was sealed below subsoil, topsoil and rubbish associated with the former nursery. Modern overburden was absent in the trenches. [Au]

*Archaeological Evaluation at Westfield House, St Thomas Drive, London Road, Boston, Lincolnshire*

Peachey, M Sleaford : Archaeological Project Services, 2006, 33pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Project Services

An archaeological evaluation comprising a 2% programme of trial trenching was undertaken at St. Thomas Drive in response for a proposal for residential development. The evaluation identified a buried soil and drainage ditches of 2nd/3rd Romano-British century date overlain by marine flood deposits. These features probably represented the western limits of a small settlement located in the area now occupied by St. Thomas Drive. The presence of cereal grains, chaff and weed seeds within the ditch fills showed that burnt cereal processing waste was being deposited, indicating that the area was suitable for arable agriculture. No later features were revealed by the evaluation other than the 20th century date. The only medieval pottery discovered was part of a manuring scatter. [Au(abr)]

Berger, M Muckton : Marc Berger, 2006, 14pp, figs, tabs, refs

*Work undertaken by:* Marc Berger

The evaluation found a pond feature, which contained modern levelling back fill and produced dating evidence covering a range from a possible Roman sherd to material mainly from the 13th to the 19th century. Over the length of the trench the topsoil and subsoil produced a low density of evidence, of materials originating from the medieval and post-medieval period consistent with the roadside location within a medieval village. It was thought likely that the plot was traversed by a 20th century track overlying ridge and furrow which probably truncated earlier activity. [Au(adp)]

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2006, 57pp, colour pls, figs, tabs, refs

*Work undertaken by:* Northern Archaeological Associates

The nine trial trenches excavated identified localised Roman activity, as well as some medieval features. AD 3rd century pottery indicated activity but probably not occupation, whilst in the northern part of the site, a large pit containing cattle skeletons and pottery was dated to the 13th-14th centuries. This appeared to be an isolated feature peripheral to the moated site to the north. The presence of a post-medieval field system was also noted. The evaluation gave enough information to construct a suitable mitigation strategy. [Au(adp)]

Field, N &amp; Young, D Lincoln : Lindsey Archaeological Services, 2006, 17pp, colour pls, figs, tabs, refs

*Work undertaken by:* Lindsey Archaeological Services

An evaluation trench found evidence of a channel or ditch aligned east/west, containing pottery of 12th-13th century date. Subsequent to the filling in of the channel it appeared that the area formed part of a rear yard to properties fronting on to the High Street. The ground may have levelled/cleared as there were no remains dating to the period between 13th and 19th centuries. Foundation design for the building had yet to be finalised but would comprise a raft. Overall, it was considered that the impact of the development on archaeological remains would be low. [Au(abr)]

#### ***St John's Road, Newport, Lincoln***

Jordan, M Lincoln : Lindsey Archaeological Services, 2006, 28pp, colour pls, figs, tabs, refs

*Work undertaken by:* Lindsey Archaeological Services

Archaeological evaluation revealed the presence of 3rd to 4th century Roman pits, probably associated with settlement along Ermine Street to the west of the site. These were present at a depth of 1 to 1.2m from ground level at the time of the evaluation, while these features were preserved under a former ploughsoil layer, several modern features and recent disturbance could be seen cutting beyond this depth and were likely to have truncated features elsewhere on the site. The disturbed remains of a medieval wall in the west of Trench 3 was the only evidence of later remains. [Au(abr)]

*Work undertaken by:* Archaeological Project Services

The evaluation identified deposits and features of Saxon, medieval, post-medieval and modern date as well as a range of undated deposits. The majority of features, including post holes, pits, ditches and gullies, indicated a sizeable settlement dating to between the 5th and 8th centuries. Concentrations of domestic refuse were noted on the east side of the site. Medieval and later remains were generally scarce across the site. However, a medieval stone building was located in the southern part of the evaluation area and was possibly part of the evaluation area and was possibly associated with two contemporary quarry pits. The evaluation comprised the excavation of six 20m trial trenches. During the construction of a malthouse on the site in the mid 1860s, a Romano-British pottery kiln and a number of inhumation burials had been found during the excavation of the foundations. This evaluation did not locate similar features but did find a section of ditch, which yielded three sherds of pottery ranging in date from the 2nd to 3rd to the 3rd and early 4th centuries. Although undated and unexcavated, two possible post holes and a possible pit found at the same levels may also have been of the same date. Two plough marks and ploughsoils of probable post-medieval origin were located. The evaluation also identified a number of wall footings, floor levels and load bearing brick pillars as well as made ground deposits associated with the 19th century malthouse, and deposits associated with its demolition in the 1970s. *Work undertaken by:* Archaeological Project Services

An archaeological evaluation was undertaken in close proximity to the site of the medieval Hough Priory. A single north-south orientated post-medieval ditch, probably a field boundary and/or for drainage, was revealed. This ditch contained a large amount of animal bone and appeared to have also been used for the disposal of dead livestock or butchery/food waste. This feature may have been located on the eastern edge of the grounds or complex of the 17th century Hall. Several north-south orientated plough furrows and an associated ploughsoil horizon of probable relatively recent origin were also identified. [Au(abr)]

Butler, A & Foard-Colby, A Northampton : Northamptonshire County Council, 2006, 23pp, colour pls, figs, tabs, refs

*Work undertaken by:* Northamptonshire Archaeology

A geophysical survey and an archaeological evaluation was carried out on 0.2 ha of land within a previous walled garden proposed for a sports hall at Quinton House School, Upton. The survey revealed a sub-rectangular ditched enclosure, ditches, a possible pit alignment and numerous other pits. The evaluation confirmed the location of the enclosure, together with internal features including pits, post holes and gullies, containing Iron Age pottery. A series of ditches to the north west of the enclosure were observed along with a pit associated with the alignment. Further post holes and ditches were revealed outside of the enclosure. Iron Age pottery and animal bones were found. At the south end of the site a medieval enclosure ditch which might have represented the north eastern end of the deserted medieval village was also revealed. Medieval pottery and animal bone fragments were found. Two musket balls and a cast iron fruit tree identity tag were found from the topsoil. [Au(adp)]

**COLLEGE PLACE AND MARKET HOUSE COURTYARD, BRACKLEY*****Archaeological Evaluation In College Place and Market House Courtyard, Brackley, Northamptonshire***

Carlyle, S Northampton : Northamptonshire County Council, 2006, 25pp, colour pls, figs, tabs, refs, CD

*Work undertaken by:* Northamptonshire Archaeology

An archaeological evaluation was carried out at College Place and Market House Courtyard, Brackley. Due to constraints, the street frontage and the area immediately to the rear of the street frontage could not be investigated, and the evaluation could only be undertaken in the central and eastern part of the site. The earliest feature encountered was a medieval ditch with a possible bank, which probably predated the expansion of the planned medieval town in the late 12th/early 13th century. Close to the eastern edge of the site there were a number of pits, probably cess pits, which broadly dated to the 13th

century and were probably related to the burgage plots associated with the expansion of the new town. The ground level in College Place appeared to have been raised by at least half a metre in the late 15th century. Until the mid 20th century the area was occupied by gardens and orchards, before being cleared for industrial and agricultural buildings and yards. [Au]

*Archaeological Evaluation. St Peter's Way, Cogenhoe, Northamptonshire*

Peachey, M & Murphy, K Sleaford : Archaeological Project Services, 2006, 24pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Project Services

An evaluation was carried out at the site, located close to the medieval and post-medieval core of the village of Cogenhoe. A post-medieval/modern demolition layer was the only archaeological deposit to be located, despite significant remains of Roman and Iron Age activity having been previously recorded in close proximity to the development area. This was thought to have either not extended into the development area, or to have been destroyed by the demolition/levelling activity at the site. [Au(adp)]

*Archaeological Fieldwalking Survey at Cosgrove Roman Villa, Cosgrove, Northamptonshire*

Burrow, A Northampton : Northamptonshire County Council, 2006, 38pp, figs, tabs, refs, CD

*Work undertaken by:* Northamptonshire Archaeology

A fieldwalking survey was carried out on the Roman villa and lathhouse site at Cosgrove. The objective was to identify how the archaeological resource had altered since the field was last surveyed in 1992. There were 169 finds recorded, mostly relating to the Roman period, with background amounts of prehistoric, Saxon and medieval finds. The distribution patterns were judged to have altered slightly in the intervening 14 years, probably due to ploughing. [Au]

*Work undertaken by:* Northamptonshire Archaeology

In total, 33 evaluation trenches were excavated within the proposed road corridor and the footprint of an associated balancing pond. Archaeological remains were only encountered in four of the trenches. These comprised undated ditches and gullies most of which corresponded with geophysical anomalies. Other features identified by the geophysical survey were found to be attributable to modern disturbance or to be of probable geological origin. [Au(abr)]

*Work undertaken by:* Northamptonshire Archaeology

An archaeological evaluation found the remains of a Roman building replaced by a post hole structure. A considerable quantity of Roman pottery ranging in date from the 1st-3rd century AD was recovered from the above floor surface of some features. Three Roman coins and a quantity of metal objects including a lead weight, scraps of lead and iron nails were recovered. Post-medieval and modern rubbish pits cut the later garden layers. [Au(adp)]

*Work undertaken by:* Ivens, R J

Two test pits (each 1.5 x 1.5m) were excavated at locations within the footprint of a proposed extension of the church rooms into the existing churchyard. Evidence of burials of uncertain date was recognized in both test pits. Work was therefore suspended in order not to disturb the remains. Artefacts recovered were mainly of modern date but several medieval and late 17th-18th century potsherds were also found. [Au(adp)]

Geophysical survey had identified a number of possible features around the base of a possible motte and bailey castle. While the identity of the feature remained uncertain, Saxon and medieval pottery showed activity in the area. Slots and post holes suggested a medieval feature of some size, as well as contemporary boundary ditches and metal working. The most surprising encounter was Roman made ground, suggesting large-scale landscaping of the site in the 1st and 2nd centuries AD. [Au(adp)]
