ALLOTMENTS TO THE NORTH OF DARCY GARDENS AND 60 & 62 COOMBES ROAD, DAGENHAM

Allotments to the North of Darcy Gardens and 60 & 62 Coombes Road, Dagenham, London Borough of Barking And Dagenham. An Archaeological Evaluation

Clarke, C Twickenham : AOC Archaeology Group, 2006, 27pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The evaluation initially comprised ten machine excavated trenches. Due to obstructions, this was reduced to seven trenches. Features were recorded in the majority of trenches, most of which were attributed to natural processes or modern activity, while the land was in use as an allotment. No ambiguous features were observed, a possible linear ditch and a post hole. No significant archaeological features or deposits were identified in any of the trenches. [Au(abr)]

Birchenough, A London : Museum of London Archaeology Service, 2006, 20pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Three evaluation trenches were excavated. Cut features comprising three ditches and a possible pit, were identified during the course of the evaluation. With the exception of a possible post-medieval field boundary ditch located to the south of the site, the scarcity of anthropogenic material retrieved during the investigation limited the ability to date the features. The Manor House, 80 East End Road, London, N3. London Borough of Barnet. An Archaeological Evaluation Report

Cowie, R London : Museum of London Archaeology Service, 2006, 32pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The evaluation trench in the north-east corner of the site (outside the Scheduled Ancient Monument), revealed one side of a moat shown on early maps crossing the area now occupied by the caretakers house and garden. A total of four auger holes were sunk in a transect across a moat that survived as an earthwork near the south-west side of the site to record to establish the profile of the moat and determine its extent and characteristics. For a substantial amount of time standing water lay in the bottom of the moat before it was backfilled, probably in the 20th century. [Au(abr)]

H SMITH'S YARD, BELLEFIELD ROAD, FORDCROFT, ORPINGTON (PHASE 2)

H Smith's Yard, Bellefield Road, Fordcroft, Orpington, LB Bromley. Archaeological Evaluation (Phase 2)

Sargent, A London : Pre-Construct Archaeology Ltd, 2006, 41pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

The second phase of work comprised the excavation of five trial trenches along the south-western edge of the site. The land lay within an area designated as a Scheduled Ancient Monument, being a Roman bath house & Saxon cemetery (SAM 15). Two undated features, a large ditch and a possible metallised surface were discovered overlying the natural deposits and underlying definite Roman period features. Cut into these features were post hole and a large shallow pit filled with a deposit saturate with charcoal and containing many pottery sherds dated to a period between the 1st century and earlier 3rd century. This was overlain by a burnt surface, suggesting a sequence of light industrial activities. Two other features dating to this period were discovered, comprising another large shallow pit underlying a ditch. Both were filled with contemporary ploughsoil. These features were sealed by one or more horticultural horizons, which occasionally also overlay shallow post-medieval truncations and, in one instance, two large pits dated to the 18th or 19th centuries. These horizons were probably associated with the use of the site as allotments prior to the construction of the existing yard in the mid

20th century, at which time they were severely truncated. The south-western wall of a probable sunken chamber, possibly a shot-blasting pit, was located at the eastern end of the site. [Au(abr)]

St Giles Court, St. Giles High Street, London. London Borough of Camden. An Archaeological Evaluation Report

Cowie, R London : Museum of London Archaeology Service, 2006, 45pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

A total of 21 evaluation pits were excavated on the site for archaeological and/or geotechnical purposes. Large parts of the site had no current basement but the evaluation showed that most of these areas suffered some disturbances in the past. Where this disturbance has not occurred a large volume of principally post-medieval stratified material was observed. The basement appeared to have removed all of the horizontal archaeological strata. [Au(abr)]

Burton, E London : Museum of London Archaeology Service, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The field evaluation recorded medieval stake and post holes. The structures were probably representative of storage or enclosures related to the agricultural or pastoral use of the land during this period. One example showed evidence of trampled ground and appeared to form a pen or enclosure, whilst another showed some evidence for a roof. Intercutting pits, dated to the 17th century, truncated these features and in turn were overlain by landfill of late 17th to early 18th century which appeared to

have been reworked in modern times. Remains of a 17th-18th century north-south aligned cellar wall survived above underpinning associated with a 20th century basement. [Au(abr)]

Mackinder, T London : Museum of London Archaeology Service, 2007, 24pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The evaluation found that across the site there were Roman deposits in the form of pits, dumps, possible gravel surfaces and a fragment of 3rd century masonry wall that was the corner of a room or building. A tile floor was also noted in the north-west corner of the site. These deposits were later truncated by rubbish pits that dated from the 10th to 13th centuries. Two chalk foundations were probably the remains of medieval buildings. [Au(abr)]

Telfer, A London : Museum of London Archaeology Service, 2006, 22pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

In all of the archaeological pits, at least the upper metre of material consisted of modern slabs and/or dumped material. A test pit in the northern area of the basement revealed 19th century building foundations and backfill overlying probable Roman deposits at 13m OD. These included a section of a tile structure, which appeared to be on the same alignment, north-west to south-east, as the Roman forum, which was situated to the west of the site. A test pit in the centre of the site revealed late post-medieval pit fill to a depth of at least 12.5m OD. Deposits in a test pit in the south consisted of the remains of a possible 18th century wall overlying a layer of clay silt containing fragments of chalk. This layer possibly represented the demolition of medieval occupation. [Au(abr)]

Elsyind Palace, Forty Hall, Enfield, September-November 2006

Dearne, M Enfield : Enfield Archaeological Society, 2006, 31pp, figs, tabs, refs

Work undertaken by: Enfield Archaeological Society, Martin J. Dearne Archaeological Services

The excavation of 18 test pits to investigate the archaeological impact of proposed tree planting provided several exposures of brickearth and pebbled surfaces in and beyond the outer courtyard of the Tudor palace and recorded some dumps forming them that may have been connected to ground made up during the construction of the palace. A stretch of in situ Tudor wall was encountered, three phases of flooring, a partition wall foundation, and a near surface lain brick floor probably within a structure on the north side of the outer courtyard. Two pits encountered significant sixteenth/seventeenth century midden/rubbish deposits producing faunal assemblages. Some pits included filled palace demolition cuts and many palace demolition dumps were encountered, some probably changing the topography of the site and some including finds relating to the decoration of the palace. Hart, D Ditchling : Archaeology South-East, 2006, 30pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A total of five trenches measuring 20.00 m by 1.80 m were excavated across the site to reveal the underlying natural sand between 21.77 m OD (north end of Trench 3) and 20.44 m OD (northeast end of Trench 1). A further 10 test pits excavated in order to investigate the palaeoarchaeological potential of the site. The earliest identifiable activity on the site comprised 19th century pitting that was interpreted as small scale quarrying of the underlying natural sand. These features were sealed by a thick layer of 19th or 20th century made ground, presumably in advance of the construction of the factory buildings that stood on the site until their recent demolition. Work undertaken by: Museum of London Archaeology Service

Five evaluation trenches were excavated on the site. Quarry pits of post-medieval date, possibly predating the 19th century, were recorded in Trenches 4 and 5 in the western part of the site. Evidence of 19th century residential development was recorded in the eastern part of the site. This comprised a series of three brick-built cesspits/privies and associated east-west brick walls, representing outbuildings or annexes to the rear of the houses fronting onto Parsons Green. Extensive dumping of 19th century date was recorded in Trenches 1, 3, and 4. In Trenches 2 and 5, 20th century disturbance had removed any earlier horizontal deposits. [Au(abr)]

Evaluation Report on The Ivy Conduit, Holy Cross School, George Lane, Kingston, Surrey. KT2

Perry, J Merton Park : Sutton Archaeological Services, 2007, 29pp, colour pls, figs

Work undertaken by: Substrata Ltd.

The 18th to 20th century tiled floor to the main chamber of the conduit was removed, revealing a Tudor brick floor, brick sump and lead cistern with an outlet pipe. In the 18th century, another outlet was added to the lead cistern either as a replacement or as an overflow. The 18th century work involved the removals of the west sump wall, brick floors and the conduit west wall. When the conduit system was closed down in the late 19th century, the sump was filled in and a new outlet added and a tile and brick floor laid in the main chamber. A pit was dug through the tile and brick floor in the 20th century in an attempt to removed the lead basins. [Au(abr)]

Lark Hall Park, Priory Grove, London, SW8. London Borough of Lambeth. Archaeological Evaluation

Museum of London Archaeology Service London : Museum of London Archaeology Service, 2006, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The trench revealed part of a mid-Victorian tenement house, constructed from red and yellow stock bricks. An east-west aligned external wall was located in the central area of the trench with a north-south return wall abutting it, forming a corner of the house. A square ceramic drain and waste pipe adjacent to the west of the north-south wall suggested that it was the rear of the building next to the back yard, part of which was exposed on the western side. Two east-west internal walls, one metre apart and abutting the north-south main wall were interpreted as the foundations for internal staircase. Finds from the site included pot sherds from cups, plates and paint-mixing vessels, clay pipe, marble and slate fragments, floor and wall tiles and nails. [Au(abr)]

POTTERS FIELDS, SOUTHWARK

Potters Fields, Southwark, SE1. London Borough of Southwark. An Archaeological Evaluation

Thrale, P London : Museum of London Archaeology Service, 2006, 32pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Deposits were recorded in all four trenches that may represent dry land surfaces deposited within the Late Iron Age/early Roman period and may have been part of the Horselydown eyot. Features and

dating evidence provided evidence of activity in the area from the Roman period and possibly the pre-Roman period. Trenches 1 and 2 also provided information of post-medieval occupation on the site. In Trench 1, the cellars and foundations of several terraced buildings were recorded. In Trench 2, a large deposit of sandy, clayey silt was recorded that represents post-medieval open land or market garden activity on the site. This deposit was truncated by a series of structures that represented early to mid 19th century warehousing or industrial activity. [Au(abr)]

Archaeological Evaluation Report of 10-20 Dock Street, London E1

Hunt, G London : L-P: Archaeology , 2007, 58pp, colour pls, figs, refs

Work undertaken by: L-P: Archaeology

The evaluation consisted of five hand-excavated test pits. The site lay close to, but probably outside, the eastern Roman cemetery of London. The results of the fieldwork indicated that a large part of the early post-medieval sequence was preserved on site, but that this sequence was characterised by thick dump deposits which were possibly filling quarry pits. A focus of archaeological interest was the recording of the mill building itself and any hidden features which may have been revealed during demolition and site clearance. [Au(abr)]

Ford, S Reading: Thames Valley Archaeological Services, 2006, 14pp, figs, tabs, refs

Work undertaken by: Thames Valley Archaeological Services

An evaluation was carried out in advance of the construction of new office buildings. Despite excessive basemending of the site in post-medieval times, the archaeologically relevant levels were largely intact with no evidence of quarrying. A single late Roman pit was discovered, showing potential for the recovery of contemporary remains across the site. [Au(adp)]

EAST LONDON LINE PROJECT, NORTHERN EXTENSION, BISHOPSGATE GOODS YARD

East London Line Project, Northern Extension, Bishopsgate Goods Yard, London, E1. London Borough of Tower Hamlets and Hackney. An Archaeological Evaluation Report

Daykin, A London : Museum of London Archaeology Service, 2006, 55pp, figs, tabs, refs
Work undertaken by: Museum of London Archaeology Service

The proposed development involved the construction of a new railway station and viaduct. The massive foundations of the demolished railway arches were present, but between them the preceding post-medieval sequence was found to largely intact across the site, except for Trenches 5 and 6, where it was more truncated. Relatively well preserved remains of 17th-19th century properties were recorded, including walls, floors, yards and cess pits. There was evidence of both domestic and industrial use and of chronological progression. In Trenches 8 and 9, near Brick Lane, there was large scale quarrying for 17th century brick manufacture, prior to 18th century housing development. In Trenches 1-4 (at the opposite western end of the site) there were also earlier agricultural deposits and a number of medieval pits. [Au(abr)]

Menary, C London : Museum of London Archaeology Service, 2007, 24pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Two evaluation trenches were excavated on the site. The earliest deposit was the natural alluvium, which represented an ancient ground surface, from which flints, interpreted as the remnants of a possibly Bronze Age flint scatter, were recovered. This was overlain by 18/19th century topsoil and a post-1861 building. A possible depression left by an extinct course of the Falcon Brook was observed, in-filled with 19th century dumping. Compass Archaeology London : Compass Archaeology , 2006, 32pp, colour pls, figs, tabs, refs

Work undertaken by: Compass Archaeology

The evaluation consisted of 9 trial trenches. The geophysical survey identified a number of potential archaeological features: these included two possible enclosures, pits and linear features. Each trench was excavated by machine down to the level of the natural head deposit. There were no significant finds. Two small pits produced late post-medieval finds and the linear features were identified as modern field drains. A single flint core of Mesolithic or Neolithic date was found residually within one of the fairly recent features. [Au(abr)]

Askew, A & Howell, I London : Museum of London Archaeology Service, 2006, 24pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The archaeological evaluation found that the construction of Bowater House removed archaeological deposits from within the footprint of the building but it was demonstrated that some deposits had survived beyond the later building line on the south side, on the Knightsbridge frontage. However, it was partially demonstrated that they had been removed by the earlier 19th century cellared buildings, evidence for which was located in test pit 1. [Au(abr)]

Cowie, R London : Museum of London Archaeology Service, 2006, 39pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Excavations revealed river terrace gravel overlaid by brickearth. A prehistoric pit cut the brickearth. It yielded an abraded sherd of lint-tempered pottery dated to the Middle or Late Bronze Age, a burnt flint

pebble, frequent charred plant remains and occasional fragments of burnt bone. The contents might have been evidence of cremation or a placed deposit. Two 18th century or early 19th century pits also cut the brickearth. Soil horizons containing post-medieval pottery overlain by brickearth were covered in turn by successive 19th century dump layers, which included a considerable quantity of building rubble. Part of a post-medieval wall, of possibly 18th century date, was also recorded. Features associated with the development of the site in the second quarter of the 19th century and/or its subsequent occupation included a brick-lined cess-pit and the remains of a cellar of a public house.
