PEACOCK FARM, PHASES 2,3 AND 4***Peacock Farm, Bracknell, Berkshire, Phases 2,3 and 4***

Anker, K Oxford : Oxford Archaeology, 2006, 120pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The evaluation of the southern area consisted of 212 trial trenches. Although over three quarters of the trenches contained none, or undated, archaeological features, the evaluation identified small areas of potentially significance archaeological remains. An area of Late Iron Age and early Roman settlement activity was observed in Phases 2 and 3. This consisted of a series of enclosure ditches situated to the south west of Jennett's Hill and several small features located to the north and west of Phase 2. In the remaining trenches several small prehistoric ditches were identified in phases 2, 3 and 4 and limited post-medieval activity associated with former field systems was also identified. 23 CHURCH STREET, BUCKINGHAM*Proposed Two Storey House, 23 Church Street, Buckingham. Archaeological Trench Evaluation*

Sprengr, P Lincoln : Network Archaeology, 2006, 48pp, figs, tabs, refs

Work undertaken by: Network Archaeology

The watching brief revealed a phase of landscaping prior to the construction of a limestone surface incorporating a later drain. Fragments of animal bone suggested a butchery site. This surface was significant as it had been thought that the area was agricultural in nature at this time. A second layer of landscaping over this was thought to relate to the construction of the 18th century houses. [Au(adp)]

ROMAN SETTLEMENT AT GRENDON UNDERWOOD, THE HARDWICK TO MARSH GIBBON GAS PIPELINE*Roman Settlement at Grendon Underwood, the Hardwick to Marsh Gibbon Gas Pipeline, Buckinghamshire. Archaeological Evaluation*

Thatcher, C Castle Hill : Cambridgeshire Archaeology, 2006, 68pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

The evaluation, on the proposed route of a gas pipeline, recorded archaeological evidence in Area F that attested to probable Roman settlement in the vicinity. This included possible structures and domestic settlement enclosures and, further west, the site of industrial activity in the form of iron smelting. Towards the east of the area structural evidence on the form of post holes sealed by a possible demolition layer were noted, including a significant quantity of pottery and CBM. Banked ditches and a number of pits were also indicative of settlement activity. A mettle surface and quantities of iron slag were encountered. The close proximity of Roman Akeman Street to the south was thought to have facilitated industrial activity at the site. [Au(adp)]

Denham Park Farm, Denham, Buckinghamshire. An Archaeological Evaluation

Doyle, C & Hallybone, C Hertford : Archaeological Solutions, 2006, 138pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

There were 172 trial trenches excavated across the site in advance of proposed mineral extraction. Of these, 139 revealed nothing of archaeological interest. The majority of features discovered in the rest of the trenches comprised linear ditches, probably associated with former field systems. Artefacts dated to the Late Iron Age, Roman and late medieval periods. Post holes representing an Iron Age agricultural structure were encountered, as well as farm buildings from the post-medieval/early modern period. The site was thought to have been agricultural in nature for an extremely long time. [Au(adp)]

Work undertaken by: AC archaeology

The evaluation consisted of four trenches totalling 80m in length each 2m wide. Three trenches revealed evidence of relatively modern truncation across the site, and one trench revealed a depth of modern dumped deposits overlying a localised colluvial deposit. This modern activity probably derived from the construction of adjacent factory buildings to the west and railway line immediately east which bounded this side of the site. No evidence for any archaeological features was present in any of the trenches excavated, with only a small quantity of prehistoric pottery and worked flint recovered from a colluvial deposit encountered in Trench 1. LAND AT MISSENDEN, KINGSNORTH ROAD, ASHFORD*An Archaeological Evaluation on Land at Missenden, Kingsnorth Road, Ashford, Kent*

Wragg, E London : Pre-Construct Archaeology Ltd, 2006, 34pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation was undertaken in advance of proposed development work. A geophysical survey had previously not determined whether archaeological features were present on the site. The earliest deposits encountered by the excavation were natural clays with iron panning. Seven probable rubbish pits were recorded in the south of the site, all but three containing Late Iron Age/early Romano-British pottery. A possible natural water channel was recorded in the centre of the site which had been filled, probably deliberately, as part of an act of dumping made-ground across the eastern part of the site. One feature which may have been related to structural activity and a possible flint raft for a building, both containing Late Iron Age/early Romano-British material, were recorded in the centre of the site. Two post holes of this date were also recorded. Five ditches were recorded across the site, none of which contained dating material. One cut the made-ground and another cut one of the pits. A probable tree bowl, a pit and a post hole, both medieval in date, were also recorded along with three features containing 19th/20th century material. The above features and deposits were sealed by a layer of topsoil. [Au(adp)]

LAND AT FOSTER ROAD, ASHFORD BUSINESS PARK, ASHFORD*Archaeological Evaluation on Land at Foster Road, Ashford Business Park, Ashford*

Helm, R Canterbury : Canterbury Archaeological Trust, 2006, 45pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was carried out on land adjacent to Keel Toys, Foster Road, Ashford Business Park in advance of a proposed development of industrial units. Fifteen trenches encapsulating 464.68 square metres were machine excavated. All fifteen trenches revealed evidence for buried archaeological remains. This included field ditches and boundaries, pits, post holes, occupation deposits and possible ground beam slots. Pottery recovered from excavated features was mainly of the late Bronze Age to Iron Age date (c.900 to 50 BC). A single ditch had pottery of late Anglo-Saxon or early medieval date. Environmental samples were collected from excavated deposits. The small quantity of animal bone was in a moderate state of preservation, with only cattle and sheep/goat identifiable. Known archaeology in the immediate vicinity indicated the site formed only part of a more extensive, multi-period site, including later Iron Age and early Roman settlement. A summary of the proposed foundation layout was compared to the known depth and extent of archaeology within the site. [Au(adp)]

NO.1 RYDE STREET, CANTERBURY

An Archaeological Evaluation of Land Adjacent to No.1 Ryde Street, Canterbury, Kent

Canterbury Archaeological Trust Canterbury : Canterbury Archaeological Trust, 2006, 16pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was undertaken prior to the construction of a residential dwelling. A single trench was excavated and recorded which revealed evidence for probable Roman street metallings as well as an earlier linear feature most likely a field boundary ditch. Dating evidence for the Roman street was recovered in the form of a substantial portion of Drag.31 central Gaulish dish from c.AD 120 to AD 180. The small streets apparently formed part of a suburb of the Roman town of Canterbury. The presence of a possible ditch which certainly predated the Roman street metallings may have indicated that field systems associated with a transitional Late pre-Roman Iron Age to early-Roman settlement at Westgate Gardens extended across the area. Recent excavations at St. Dunstan's Terrace to the west and Orchard Street to the east have also found parts of a field system which may have been contemporary. [Au(adp)]

An Archaeological Evaluation at Nos. 20A, 21 and 21A Palace Street, Canterbury, Kent

Holman, J and Rady, J Canterbury : Canterbury Archaeological Trust, 2006, 10pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was undertaken prior to a proposed redevelopment. The site lay within the walls of the 3rd century Roman town of Canterbury just to the west of the Roman street from Northgate. A previously undertaken watching brief had revealed an undisturbed stratigraphic sequence to the rear of the property and surviving archaeological deposits beneath the floor of the cellar. Three trenches were hand dug revealing a surviving stratigraphic sequence dating from the Roman period onwards. The first trench, to the rear of the property, revealed a sequence of garden soils and pits cut by a Second World War air raid shelter. A complicated sequence of pits and metallated surfaces were

revealed in trench 2 together with a possible clay floor. The final trench in the cellar provided evidence for an earlier medieval cellar containing a well. Limited excavation within the area of the well showed that very little Roman archaeology had survived the building of the cellar. [Au(adp)]

ST LAWRENCE GROUND BAT AND BALL CAR PARK

St Lawrence Ground Bat and Ball Car Park Evaluation

Newhook, B and Found, BCanterbury : Canterbury Archaeological Trust, 2006, 58pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was carried out in advance of the proposed redevelopment of St. Lawrence Ground. The site lay along the south side of the Roman road that ran from Canterbury to Dover and partly encompassed the medieval hospital of St. Lawrence. The evaluation involved eight trenches covering about 5% of the site. No pre-medieval activity was identified. Remains of medieval structures thought to have formed part of the medieval hospital complex were revealed. A concentration of burials that formed a formal cemetery associated with the hospital church. Other contemporary activities were identified, including a number of pits, possibly rubbish pits associated with the hospital complex, as well as linear and boundary features. A complicated stratified sequence of building remains associated with the post-medieval manorial residence. [Au(adp)]

WHITE CLIFFS BUSINESS PARK, DOVER (PHASE 1)*Archaeological White Cliffs Business Park, Dover (Phase 1)*

Williams, M London

London

London : L-P: Archaeology, 2006, 25pp, pls, figs, tabs

Work undertaken by: L-P: Archaeology

This report represented the results of an archaeological evaluation in advance of a proposed area of access roads in to the business park. Significant archaeological remains were only noted in two trenches in the north and east of the site. These revealed three ditches and a pit, Early Iron Age pottery was recovered from two of the features. One piece of samian ware was also recovered and some struck flint was noted in the ploughed ground surface areas surrounding the trenches. It was likely that some limited further work may have been required in the north of the site. This was likely to have been a strip and map exercise to locate and sample archaeological features prior to development. [Au(adp)]

LAND AT THE FORMER SOUTHFIELDS SCHOOL, SINGLEWELL RD, SINGLEWELL, GRAVESEND*An Archaeological Evaluation on Land at the Former Southfields School, Singlewell Rd., Singlewell, Gravesend, Kent*

Archaeology South-East Ditchling : Archaeology South-East, 2006, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

The development site was 250m north of the alignment of Watling Street (the main London to Canterbury Roman road). The site was evaluated between the 9th and 13th October 2006. Twenty-four trial trenches were excavated to a cumulative length of 480m. The natural geological drift deposits (Head brickearth) were encountered mostly at shallow depths across the development site. A total of six features were identified and sampled. Two of the features contained modern material. The other four features produced no dating evidence. A possible Palaeolithic flint tool (but possibly of a later prehistoric date) was recovered from the subsoil in Trench 7. As a result, a 2m² test pit was excavated at the western end of this trench. The total depth of the Head deposit was ascertained at 1m. No more worked flint pieces were seen in this test pit. The potential for finding further archaeological remains on this site was considered to be low. [Au(abr)]

LION BUSINESS PARK NEAR GRAVESEND***Lion Business Park Near Gravesend, Kent. Archaeological Evaluation Report***

Champness, C Oxford : Oxford Archaeology , 2007, 38pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

This evaluation work formed the second part of a two stage evaluation strategy. The first stage involved the assessment of geotechnical reports and previous archaeological work in the area. The second stage comprised the excavation of 10 shallow trenches across the site. Five deep test pits excavated through the lower alluvial sequence on the site, revealed an area of Late Neolithic/early Bronze Age activity associated with flint knapping and hearth remains near the edge of the gravel terrace sealed at the interface between Pleistocene sand and Holocene peat. Beaker pottery was also recovered. The depth of overlying estuarine sediments across the site suggested that a small open trenched excavation of the localised peat sequence was achievable to the levels at which late Neolithic/early Bronze Age archaeology was identified. Riccoboni, P Ditchling : Archaeology South-East, 2006, 21pp, figs, tabs, refs, CD

Work undertaken by: Archaeology South-East

An archaeological evaluation was commissioned in advance of the proposed construction of four townhouses and one low cost dwelling. Three trial trenches were excavated to a cumulative length of 50m. Archaeological features were discovered in the southern half of the site (Trench 2). One medieval ditch was recorded and excavated. The original function of this ditch was unknown, but it may have been used as a drainage channel connected to the River Eden. In all of the trenches alluvial deposits were encountered. It was therefore likely that this area was once a wet marsh ground. The trenches showed that there had been substantial importation of materials within the relatively recent past. No archaeological features were observed in the northern half of the site. [Au(abr)]

SHORNCLIFFE REDOUBT, SIR JOHN MOORE BARRACKS, SHORNCLIFFE, FOLKESTONE

Shorncliffe Redoubt, Sir John Moore Barracks, Shorncliffe, Folkestone, Kent. Archaeological Evaluation and Assessment of the Results

Wessex Archaeology Salisbury : Wessex Archaeology, 2006, 42pp, colour pls, figs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation was undertaken by Channel 4's "Time Team" to investigate the remains of the Napoleonic Fort which stood on the site. The project was largely unsuccessful in the identification of structures dated to the Napoleonic period within the redoubt. It became clear that the Twiss maps were a combination of "as built" and "as proposed" and therefore many of the structures depicted may never have been constructed. It was clear however that the main redoubt structure comprising earthen ramparts matched the Twiss maps, with slight alterations. There had been considerable activity on the site in later periods, and this had also been a factor on the removal and obscuring of earlier Napoleonic structures. Later periods of activity were identified within the redoubt from the mid 19th century onwards, when the site became the residence of the camp commandant. The remains of a two-storey building (Redoubt House) and associated formal gardens were identified. It was clear that much of the rampart defence on the southern side had been removed to provide a clear vista from the house across the channel. [Au(abr)]

MEADOWFIELD SCHOOL, SWANSTREE AVENUE, SITTINGBOURNE

Meadowfield School, Swanstree Avenue, Sittingbourne, Kent. Archaeological Evaluation Report

Boden, D Canterbury : Canterbury Archaeological Trust, 2006, 24pp, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was undertaken in advance of proposed new construction of school buildings and facilities. The work identified the presence of at least two linear features of probable prehistoric origin, a single post-setting of probable 12th century origin and a large, backfilled pond probably extant to until the mid 19th century. In addition to these features, a possible ditch, two post holes and a large pit were also identified, although remained undated. Overall the evaluation

demonstrated that there had been little activity in any prehistoric or historic period within the development area, with an apparent absence of any evidence to suggest Roman or Anglo-Saxon activity on the site. [Au(adp)]

An Archaeological Evaluation at Land Adjacent to Waterloo Hill, Minster-In-Sheppey, Kent

Allen, T Whitstable : Kent Archaeological Projects, 2006, 14pp, figs, refs

Work undertaken by: Kent Archaeological Projects

An archaeological evaluation was undertaken in advance of the proposed construction of two buildings. Only two archaeological features, one a thin dump deposit or, less likely, a large but severely truncated pit, the other a truncated linear feature [probably a ditch] were exposed. Both contained late 19th/early 20th century pottery and brick fragments and were almost certainly associated with the later occupation of the building shown on maps to have occupied the north part of the site in 1908 and 1931. This may have been the same building as, or the successor to, one shown in the same approximate area in 1798. As no significant archaeological features were exposed in the trenches, the site was considered to have been of very low or no archaeological potential. [Au(adp)]

An Archaeological Evaluation and Watching Brief at Frogmal Lane, Teynham (Land Adjacent to the Fox Public House)

Rady, J Canterbury : Canterbury Archaeological Trust, 2006, 10pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation on a small plot of land bordering Frog Lane was carried out prior the erection of four flats. A watching brief was also carried out during groundwork for new foundations. One trench, which was cut to a length of 19m centrally to the site by machine, revealed two intercutting features of probable early Roman date, one of which was a ditch, set roughly parallel to the Roman road situated just south of the site. The nature of these features suggested an agricultural origin. [Au(adp)]

SEA TOWER, SUSSEX GARDENS, WESTGATE-ON-SEA

Sea Tower, Sussex Gardens, Westgate-On-Sea, Kent. Archaeological Evaluation Report

Boden, D Canterbury : Canterbury Archaeological Trust, 2006, 15pp, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was carried out in advance of a residential development. Two machine excavated trial trenches were cut in the rear of the garden of the property. Trench 1 was located in the north-east corner of the garden and contained a single cut feature, probably a modern soakaway. Trench 2, located along the eastern edge of the property, contained considerable archaeological remains which included a ring-ditch, stake-holes, pits and ditches. Very limited sample excavation was possible, although pottery and other cultural material recovered from the ring-ditch and the surface of other features during the machine work and hand-cleaning suggested a prehistoric and Roman date, and probably represented a small settlement or at least occupation during the later Iron Age [Belgic] period and the earlier Roman period. Moody, G Birchington : Trust for Thanet Archaeology, 2006, 20pp, figs, tabs, refs

Work undertaken by: Trust for Thanet Archaeology

Thirteen evaluation trenches were excavated revealing the full circuit of deep, steep sided ring ditch cut into natural chalk. Some isolated post holes and two post hole alignments were also revealed. The ring ditch had probably been disturbed by later quarrying and a conglomeration of individual pit cuts formed a broad and irregular feature whose limits were not fully established. Distinct breaks of slope in the level of natural chalk suggested the presence of agricultural lynchets, possibly relict field terraces of unknown date. [Au(adp)]

231-235 High Street, Rochester, Kent. An Archaeological Evaluation Report

Hart, D Ditchling : Archaeology South-East, 2006, 21pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken ahead of a proposed development. Four trenches were excavated totalling 50m in length. The archaeological sequence consisted of an undated northeast/southwest alignment of post holes and a large pit, sealed by a possible palaeosoil and apparently concentrated in the northern half of the site (trenches 1 and 2) overlain by a much more extensive sequence of dated post-medieval subsoil and garden soil horizons that was observed in all trenches. AMHERST HILL, CHATHAM***Amherst Hill, Chatham, Kent. Archaeological Evaluation Report***

Found, B Canterbury : Canterbury Archaeological Trust, 2006, 54pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological field evaluation involving a total of twenty trenches were excavated across an area of 17,341 square metres representing a 4.21% sample of the total site. An inhumation burial was encountered near the south-west corner of the site and was thought to have been the earliest archaeological feature present. The burial was aligned south-north and although no dating evidence was recovered from the partly excavated grave, it was believed to have dated to the Roman or Anglo-Saxon period. The evaluation also confirmed the presence of a glacis (an earthen bank outside of the main defensive ditch) associated with the Scheduled Ancient Monument of Fort Amherst. Along the western edge of the site the remains of the boundary wall of the original Chatham Infantry Barracks built in 1757 was traced. Associated with the wall were the remains of the officer's stable and coach house, grooms' quarters and the walled formal garden of the commanding officer's house. A number of other features dating the military occupation of the site (1755 to present) were found across the evaluation area including terraces cut into the chalk, rubbish pits and trench cut features. In the southern half of the site a number of ephemeral features were revealed which may have related to the formal gardens of the infantry barracks. [Au(adp)]

Meckseper, C Bedford : Albion Archaeology, 2006, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

Two evaluation trenches were excavated in Area 1. Trench 5 contained four furrows on a parallel alignment. Segments were excavated through two of the furrows, confirming they were shallow in depth and concave in profile. Trench 6 contained one ditch and three furrows on a north-west to south-east alignment and one ditch on a north-east to south-west alignment. One ditch was steep sided in profile and had a flattish base. Several fragments of

Late pre-Belgic Iron Age and Early-Middle Iron Age pottery were recovered. The north-west to south-east extension of Trench 6 contained the second ditch on a north-east to south-west alignment. This also had steeply sloping sides, and a V-shaped profile. It contained 23 fragments of Late pre-Belgic Iron Age pottery, all thought to be derived from the same vessel. [Au(adp)]

Hardwick, Buckinghamshire to Marsh Gibbon, Oxfordshire Gas Pipeline. Archaeological Fieldwalking Survey

Hardvard, T Cirencester : Cotswold Archaeology, 2006, 18pp, figs, tabs, refs
Work undertaken by: Cotswold Archaeology

Archaeological fieldwalking was conducted across three suitable fields along the 20.1km length of the pipeline. Two areas of archaeological significance were identified by the distribution of the artefacts recovered from the survey. An area of possible prehistoric activity was identified by the distribution of worked flint flakes and Iron Age pottery in the south-east of the field. An area of possible Roman activity was identified by the distribution of Roman pottery in the northern central part of the field. A scatter of heavily fragmented brick was also noted. A small amount of ceramic building material, probably indicative of manuring was recovered whilst no artefactual material was recovered from field 55. [Au(abr)]

LAND SOUTH WEST OF BICESTER*Land South West of Bicester, Oxfordshire. Report on Archaeological Evaluation*

Egging, K Salisbury : Wessex Archaeology, 2006, 99pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation consisted of 134 trenches. Previous investigation by Oxford Archaeology in 2002 immediately to the east had uncovered evidence for a Romano-British settlement. Ridge and furrow was extant in one pasture field, and crop growth showed areas of previous earthworks. Two ring ditches, probably round barrows, were identified and dated to the early Bronze Age. A middle Bronze Age palstave was located in a medieval deposit. A Late Iron Age settlement was also encountered, followed by Romano-British pits, post holes, quarries and linear features. Saxon pits, banks, ditches, post holes and other earthworks were noted, as well as medieval or later quarries and a track and a post-medieval field boundary. [Au(adp)]

WESTGATE CAR PARK, OXFORD

Westgate Car Park, Oxford. Archaeological Evaluation Report

Bashford, R Oxford : Oxford Archaeology , 2006, 125pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

An evaluation in advance of redevelopment of the Westgate Centre and associated car parks revealed a number of archaeological features. Alluvial deposits had been cut by channels, with some containing evidence for timber revetment, of a medieval or post-medieval date. Other features were alongside these, and were tentatively interpreted as quarrying evidence. Two parallel features overlain by a potential north-south aligned stone surface were thought to represent a post-medieval ford across the Trill Mill Stream. Other evidence for a possible building platform for the 13th century construction of the Franciscan Greyfriars friary was also recorded. Robbed walls and evidence for post-medieval

dissolution activity was encountered, and after this period it appeared that the site was used for gardens or pasture until the construction of Victorian terraces, demolished in the 1960s. [Au(adp)]

WARNEFORD MEADOW, HEADINGTON, OXFORD

An Archaeological Field Evaluation in Warneford Meadow, Headington, Oxford

Raymond, F Aldermaston : Berkshire Archaeological Services, 2006, 32pp, figs, tabs, refs

Work undertaken by: Berkshire Archaeological Services

The evaluation identified that the site had a low archaeological potential, with the majority of archaeological features relating to post-medieval agricultural land use and drainage. A linear cropmark identified in aerial photographs was demonstrated as marking a former stream channel. Several Roman ditches were recorded in the western side of the site, with finds pointing to a date of between AD240 and 300. The function of the ditches was unclear. A small assemblage of Late Iron Age to post-conquest pottery was recovered. The site was thought to have some potential for the discovery of Late Iron Age and Roman remains on the western margin of Warneford Meadow. [Au(adp)]

Former DOW Agrosiences Site, Letcombe Regis. County of Oxfordshire. An Archaeological Evaluation Report

Mackinder, T London : Museum of London Archaeology Service, 2006, 23pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Several archaeological features survived in the north-east of the site, and particularly alongside South Street. These comprised several ditches and pits, and a small amount of animal bone and Roman pottery was recovered. Unfortunately, the pottery assemblage was very small. Three sherds from the assemblage were dated to the Late Iron Age/early Roman period. [Au(abr)]

LAND OFF PINWOODS ROAD, KINGSTON BAGPUIZE*Land off Pinwoods Road, Kingston Bagpuize, Oxfordshire. Archaeological Evaluation Report. Test Pit Survey*

Laws, G Oxford : Oxford Archaeology, 2006, 28pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The test pit evaluation revealed worked flint, mainly to the north-east of Field 2, although no significant concentrations of activity were identified. Manuring scatters of Roman, medieval and post-medieval date were also observed, principally in Field 3 in the north of the area, although post-medieval finds were more widespread. Two layers which could represent archaeological features were found in test pits to the south of Field 3. [Au(abr)]

Gilbert, D Beckley : John Moore Heritage Services, 2006, 27pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

Eleven trenches were excavated. Numerous linear ditches and post holes, possibly associated with timber structures, were located, although most were undated. However, those to the north of the site were dated to the early middle Saxon period while others across the entire site were dated to the Saxo-Norman to early medieval period. To the south of the site, excavated features were from the 15th century onward. [Au(abr)]

An Archaeological Evaluation at 46 Acre End Street, Eynsham, Oxfordshire

Moore, JBeckley : John Moore Heritage Services, 2006, 12pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

An evaluation found that the site had been ploughed prior to the expansion of Eynsham in the medieval period. The ploughing may have been of Romano-British date. A ditch, probably an internal boundary within a burgage plot, was dated to the 14th century. Boundary ditches at the rear of the burgage plots were found. These had been recut. One may have been deliberately backfilled in the 17th century. Another one may have been earlier, of 14th century date. [Au(abr)]

LAND TO THE EAST OF EYNHAM

Land to the East of Eynsham, Oxfordshire - Results of an Archaeological Trench Evaluation

Robinson, S Chicklade : AC archaeology , 2006, 9pp, colour pls, figs, tabs, refs, CD

Work undertaken by: AC archaeology

The evaluation consisted of twelve trenches each measuring 30m x 1.9m in plan. No evidence for archaeological activity was revealed in any of the trenches. A limited number of artefacts, dating from various periods, were recovered from subsoil investigated in two of the trenches. These artefacts occurred in the subsoil as a result of deep ploughing and comprised worked flint, animal bone and a small quantity of pottery. It therefore appeared that the site had been in agricultural use since the medieval period or earlier, and had not been used for settlement. [Au(abr)]

Work undertaken by: Southampton City Council Archaeology Unit

Evidence for Middle Saxon occupation was found over most of the site, with occupation being densest to the east. This perhaps reflected a difference in land use, and possibly of land ownership. No certain evidence for medieval activity was found apart from a few stray finds. Evidence for post-medieval activity included a large pit and the filling of a possible boundary ditch to St. Mary's Churchyard. [Au(abr)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2006, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The natural brickearth substrata was cut by a number of pit-like features. Only two of these were sample excavated and very little dating evidence was recovered. However, both were similar to middle Saxon pits. In the north-west of the site, the subsoil was cut by two wall footings, of probable post-medieval date that may have represented the remains of a structure depicted on a late 18th century map, or possibly some part of a wall, vaguely depicted on a map of c.1600.  Bird, D Guildford: Surrey Archaeological Society, 2006, 5pp
 Work undertaken by: Surrey Archaeological Society
 Investigations in 2006 saw the first phase of a programme of work planned for this site over the preceding four or five years. The site of the villa was located and a trench was dug to test the approach of the road close to the villa's frontage. A spoil heap was located near the detached bath house. Finds from the heap were mostly tile. The first test pits did not locate the road but produced Roman pottery in some quantity. The second set of test pits produced prehistoric pottery which might have been associated with the possibly prehistoric earthwork surveyed previously by English Heritage. [Au(adp)]

MAJESTIC HOUSE, HIGH STREET, STAINES

Majestic House, High Street, Staines: an Archaeological Evaluation Report

Bazley, K Twickenham: AOC Archaeology Group, 2006, 41pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The evaluation consisted of five evaluation trenches. A large linear feature of Roman date, thought to be a flood protection ditch, was found in two trenches on the western side of the site. Features of likely prehistoric date were also found at the side of the site. Trenches towards the middle of the site early 20th century masonry remains including those of a former picture theatre and several red brick soakaways of likely Victorian age. Rubbish pits of similar date were also observed. A shallow post-medieval or medieval boundary gully was seen in two trenches to the east of the site. [Au(abr)]

STRATTON FARM, GODSTONE

Stratton Farm, Godstone, Surrey - Archaeological Evaluation and Assessment of Results

Hall, N Salisbury: Wessex Archaeology, 2007, 52pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation was carried out by Time Team on the site of Stratton Farm in order to investigate the possibility of Roman activity, in particular the location of a possible temple or ritual site. Roman artefacts had previously been found by metal detection. The work from Time Team comprised further geophysical survey, landscape/earthwork survey and evaluation trenches. A number of Roman features were identified including several pits and a kiln or oven. The most significant result was that the Roman road at this point did not run along Tilburstow Hill Road but was located further west through the centre of the site. No evidence was recovered to support the supposition that there had been a temple or ritual centre on the site. [Au(adp)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2007, 101pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

A total of 245, from a proposed 300, archaeological evaluation trenches were excavated. The evaluation was carried out in six areas. The evaluation revealed evidence of a landscape exploited and managed from the Middle Bronze Age to the present day. Although evidence of land division and agricultural land use was present across the entire site, areas of increased activity indicative of settlement appeared to be largely confined to areas of higher ground. The evaluation was able to

identify three zones across the site of moderate to high archaeological potential dating to the Bronze Age and Romano-British periods. [Au(abr)]

LAND AT NEWLANDS HOUSE, ARUNDEL ROAD, FONTWELL

An Archaeological Evaluation at Land at Newlands House, Arundel Road, Fontwell, West Sussex

Collings, M Ditchling : Archaeology South-East, 2006, 13pp, figs, refs

Work undertaken by: Archaeology South-East

Eight trial trenches were excavated to a cumulative length of 125m. Two burnt tree throws were investigated, however, no archaeological features or finds of archaeological significance were encountered. In conjunction with the archaeological evaluation geoarchaeological investigations, comprised of the excavation of three geoarchaeological test pits within three of the evaluation trenches. Sediments associated with a raised beach were identified, however, it was not possible to clearly identify this with the Aldingbourne raised beach or the Goodwood-Slindon raised beach. Further investigation involving purposive drilling may have allowed the stratigraphic sequence to be more closely compared with these known raised beach sequences. However, the proposed development would not impact on preservation in situ unless it was to exceed depths of 2.25m below ground level. Whilst no remains of archaeological significance were encountered, the geoarchaeological investigation provided further data for the study of raised beaches and landscape change. [Au(abr)]
