HORSHAM COURT AND HORSHAM OLD COURT, HORSHAM
An Archaeological Evaluation at Horsham Court and Horsham Old Court, Horsham, Worcestershire
 Mercian Archaeology Worcester : Mercian Archaeology, 2006, 42pp, pls, figs, refs
Work undertaken by: Mercian Archaeology
 The archaeological evaluation at the former sites of Horsham Court and Old Horsham Court
 encountered significant archaeological remains, both upstanding and buried. Both sites were poorly
 documented. The archaeological evidence from Horsham Court determined that much of a later
 extension to the court, probably dating from the late 18th century, remained as partially upstanding
 walls. This section of the house had been built over the gravel access drive, or courtyard, to the earlier
 17th century building to the rear of the site. This area was not evaluated as it was covered by mature
 trees, but upstanding walls were in evidence. At Horsham Old Court, trial trenches confirmed a past

extension. The earthwork features to the south and west of the Old Court site had been interpreted as part of a moated enclosure associated with the building or perhaps earlier buildings. [Au(abr)]

Duncan, M Birmingham : Birmingham Archaeology, 2006, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

A total of three evaluation trenches were excavated across the site. Trenches 1 and 3 were located to investigate surviving medieval remains associated with the laying out of the planned town in the 14th century. Trench 1 was located to examine deposits close to the brook along the western boundary of the site, to identify possible early industry associated with the water course. Trench 2 was located within the tannery complex to assess its survival. Trench 3 was located to assess occupation and land use behind the frontage of the main road. The evaluation revealed that the footings of buildings and pits associated with the tannery complex were well preserved. Comparison of the cartographic and archaeological evidence for the site revealed that the space between the two separate lines of tanning pits may have related to a boundary illustrated on the First Edition Ordnance Survey Map. This may

have reflected spatial divisions relating to the different processes associated with tanning, and the division of the complex into different functional zones. [Au(abr)]

LAND OFF SPIXWORTH ROAD, OLD CATTON

An Archaeological Evaluation of Land Off Spixworth Road, Old Catton

Watkins, P J Norwich : NAU Archaeology, 2006, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

An evaluation was preceded by a geophysical survey that did not produce any clear results. The evaluation revealed a number of archaeological features, although there was no correlation between these and anomalies located by the geophysical survey. A badly truncated Romano-British cremation burial was the most significant find. The remains of at least two field systems, of Anglo-Saxon date or earlier, were recorded, as well as a number of charcoal-rich pits. The site was thought to never have been the focus of settlement activity, but more of a peripheral location. [Au(adp)]

LAND TO THE REAR OF PURTON VILLA, RUYTON XI TOWNS

Land to the Rear of Purton Villa, Ruyton XI Towns, Shropshire. A Report on an Archaeological Evaluation

Tavener, N Clun : Marches Archaeology, 2006, 10pp, colour pls, figs, refs

Work undertaken by: Marches Archaeology

An evaluation trench was excavated roughly two-thirds of the way down the slope on the west side of the curtain wall of Ruyton Castle. Three features were investigated but all proved to be of 19th century or more recent date. Nothing was recovered during the evaluation that would disagree with the map and documentary sources. These strongly suggested that the property was first developed in the late 19th century at which time the castle's natural defensive slope was modified by excavation to provide a level of terraced garden. Work undertaken by: Birmingham Archaeology

An archaeological evaluation was undertaken in advance of the construction of a flood compensation area. The geophysical survey identified a number of pit like and ditched anomalies, the former thought to correspond with the known cropmark pit alignment of prehistoric date. Other anomalies, such as field boundaries, were thought to be of post-medieval date. A total of 26 trenches were excavated and proved that the cropmark pits were of natural origin. {Au(adp)}

CITY PARK GATE

City Park Gate, Birmingham - Report on an Archaeological Evaluation

Hayes, L Chester : Gifford & Partners, 2006, 68pp, colour pls, figs, tabs, refs

Work undertaken by: Gifford & Partners

An archaeological evaluation was carried out and eight trenches were excavated. The evaluation identified eight discrete phases of activity. Phase one contained medieval cultivation soils and a possible structural feature. Phase two had a medieval pit. Phase three had post-medieval soil accumulation. Phase four had post-medieval pits and gullies. Phase five had 17th/18th century cultivation soil. Phase six had 18th early 19th century structures. Phase seven had 19th century structures and phase eight had 20th century demolition and modern surfaces. These were not present in all trenches, but well preserved medieval deposits dating from the 13th century onwards were identified in trenches two, five and six. [Au(adp)]

HOLFORD DRIVE, PERRY BARR, BIRMINGHAM

Holford Drive, Perry Barr - an Archaeological Evaluation and Further Excavation 2006

Burrows, B & Halsted, J Birmingham : Birmingham Archaeology, 2007, 29pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation and further excavation was carried out. Four evaluation trenches were excavated and a number of post-medieval features were recorded in the form of fence lines and post holes. A more substantial ditch was also recorded close to Holford Drive. Further excavation work was undertaken in order to sample this ditch and obtain dating evidence. No artefacts were recovered from the ditch. The lower ditch fill was radio-carbon dated to the late glacial period. [Au(adp)]

Mann, A, Patrick, C & Hurst, D Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2006, 58pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

Three separate evaluations were carried out at the former Longbridge North Works Car Park. Stone and brick walls and cobbled yard surfaces of a building known from cartographic evidence as Longbridge House, were identified. Artefactual remains suggested that the building dated from the 18th century. To the north and east of the building palaeochannels were identified. Environmental analysis dated these deposits to the early medieval period. [Au(adp)]

Archaeological Evaluation, Desk-based Assessment & Trial Trenching - Dawberry Playing Fields, Allens Croft Road, Birmingham

Coates, G & Cherrington, R Milton Keynes : Phoenix Consulting, 2006, 35pp, colour pls, figs, tabs, refs

Work undertaken by: Phoenix Consulting

An archaeological evaluation was carried out. A desk-based assessment was also carried out prior to development and indicated that the site had been open fields and field boundaries from at least the early 19th century through to the modern period. The excavation involved twelve trial trenches, however, they found no strong evidence of archaeological activity on the site. In trench eight a ditch was identified, which may have been an early field boundary. The only artefacts recovered dated to the 19th and 20th centuries. [Au(adp)]

THE SARACEN'S HEAD, KING'S NORTON, BIRMINGHAM

The Saracen's Head, King's Norton, Birmingham - Archaeological Excavation 2006

Duncan, M Birmingham : Birmingham Archaeology, 2006, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation and search of documentary evidence was carried out prior to an excavation. It was indicated that there was a possibility for the survival of significant archaeological deposits. The excavation comprised three areas adjacent to the standing buildings of the Saracen's Head complex including the courtyard, the entrance passage from the Green to the courtyard and a small area on the eastern frontage of the north range. The earliest deposit was dated to the 13th century and the excavation demonstrated that at least two timber structures existed on the site. Other finds included a cobbled surface of medieval origin and that the Saracen's Head was constructed at the turn of the 15th to 16th century. [Au(adp)]

An Archaeological Evaluation of Astley's Paints, the Former Calcott Brothers Factory, Far Gosford Street, Coventry

Richards, G Leicester : University of Leicester Archaeological Services, 2006, 17pp, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

A total of seven trenches were excavated. Deep archaeologically significant stratigraphy was recorded in the trenches adjacent to the Far Gosford Street frontage and analysis of recovered pottery indicated 12th or 13th century occupation and possible industrial land use. Earlier deposits were thought to exist below these layers. Evidence for post-medieval stone buildings was also noted, again with the potential for underlying earlier deposits. Trenches towards the rear of the development area contained evidence of palaeo-environmental significance and evidence of relic river channels associated with the adjacent River Sherbourne. WEDNESBURY TOWN CENTRE DEVELOPMENT, STAGE 2***Wednesbury Town Centre Development, Stage 2 - Archaeological Evaluation***

Mann, P Birmingham : Birmingham Archaeology, 2006, 41pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation was undertaken in two areas: to the west of Camphill Lane and to the south of Camp Street. A total of eight trial trenches were excavated following the completion of a desk-based assessment, an earlier stage of trial-trenching, and an area excavation. The excavation, located to the south-west of Camphill Lane, examined evidence for pottery production, and the dumping of quantities of waste pottery into the adjoining town ditch. The 'floruit' of this industry was in the 17th century, although some evidence of possible earlier pottery manufacture was also found. The Stage 2 trial-trenching was intended to assess the evidence for surviving below-ground deposits related to medieval settlement and industry, and post-medieval industry. A roughly north-south aligned length of the possible town ditch was located to the west of Camphill Lane. The same feature was further examined by the excavation to the south, where the ditch had been enlarged, and used in connection with pottery production. Evidence of undated plot boundary ditches was recorded adjoining the Russell Street frontage within the Market Hall car park. A single plot boundary of possible 16th-17th century date was recorded to the south of the Camp Street frontage. Much of the remainder of the Market Hall car park had been disturbed by 19th century development. However, it was likely that any surviving early post-medieval features would be unaffected by the new supermarket car park, which would only involve limited reduction in ground level within the area of the Market Hall car park. Charles, M Birmingham : Birmingham Archaeology , 2006, 62pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation of land was conducted due to its proximity to a number of known significant archaeological sites, including St. Peter's Church. The medieval manor house may have been in the vicinity of the site, adjacent to the church. Three trenches were excavated to locate and identify any archaeological remains that could be affected by a proposed development. The evaluation provided evidence of undated archaeological features in the south-east part of the site. These were in the form of a pit and a gully cut into the natural clay. It was possible that these features could have dated to the medieval or post-medieval period. The presence of deep layers of topsoil and subsoil, sealing the archaeological features, suggested that the site had been used for agriculture prior to the construction of works buildings in the 20th century. The depth and location of the archaeological features recorded meant that they were unlikely to be affected by the proposed development. [Au(abr)]

BENTLEY CAIRN, WALSALL

Bentley Cairn, Walsall, Black Country Archaeological Trial Trenching 2006

Ramsey, E Birmingham : Birmingham Archaeology, 2006, 31pp, colour pls, pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

Trial trenching was undertaken and a total of three trenches were excavated to locate and identify any remains associated with halls known to have been present at the site. A ditch was recorded, containing a fragment of late medieval pottery. Other undated features were identified and may have been of a similar date. The site of the Jacobean hall was not identified, although brick and pottery likely to be associated with this phase was recovered. Despite the area having been subjected to extensive mining, archaeological structures, deposits and artefacts associated with the last phase of the hall were identified in all three trenches excavated. This phase of the hall was probably constructed around 1800 at the height of the agricultural revolution and the hall and its associated buildings were indicative of the trend of model farms of this period. The extent of survival of below ground archaeological remains was impressive and demonstrated that further work in the area would be likely to locate the Jacobean phase of the hall and enhance the archaeological record of the later phase. Archaeological Evaluation, Desk-based Research & Trial Trenching - Land to the Rear of 83/84 Stafford Street, Willenhall, West Midlands

Bain, K & Coates, G Milton Keynes : Phoenix Consulting, 2006, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Phoenix Consulting

An archaeological evaluation, desk-based assessment and trial trenching was undertaken. The desk-based assessment indicated that the site had been open ground until the late 19th century, at which time a number of buildings were constructed. Later in the 20th century the buildings were demolished with the exception of the buildings fronting Stafford Street. Three trial trenches were excavated and two post-medieval walls were identified in trench one, both were of brick and limestone constructions. A linear pebble surface appearing to date from the early 19th century was also identified in trench one and followed into trench two. Trenches two and three identified walls and structures dating to the 20th century and a possible pond which was visible on the 1841 Tithe Map. [Au(adp)]

LINE OF THE PROPOSED BORDESLEY BYPASS

Archaeological Evaluation on the Line of the Proposed Bordesley Bypass, Worcestershire

Rogers, T Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2006, 57pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

Archaeological evaluation, including sample trenches, earthwork survey and geoarchaeological survey were undertaken. Due to the depth of material within a large depression south of Cobb's Farm, it was not possible to fully excavated it but an auger core recorded a depth of 2.96m. An earthwork survey of the area was also undertaken to record surviving earthworks. At Weights Lane, two linear depressions were also identified and had also been infilled fairly recently with the former line of topsoil still preserved. There were thought to represent former holloways within the settlement or possibly a mill leat marked on a tithe map of 1840. A small pit and linear feature were also recorded to the east of the site. It was concluded that although the earthworks that existed on both of these site had been damaged by levelling, presumably for agricultural purposes in the last thirty years, the negative elements of these earthworks remained below the surface. Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

Eight trenches were excavated, six of which revealed archaeological features. Iron Age pottery was recovered from the fill of a large ditch at the southern end of the site. The size and location of the ditch suggested that it had a defensive function. Roman pottery was recovered from several small pits and ditches, as well as a considerable amounts of iron slag, ash and coal suggestive of smithing or other industrial activity. Two post-medieval features were also recorded. The extent of the Iron Age and Roman site was uncertain. [Au(adp)]

An evaluation was carried out in advance of a new residential development. The presence of protected species prevented access to the western half of the site, but in the northern half of the eastern area contained a series of gullies and ditches delineating rectilinear enclosures, as well as a series of pits. Artefacts dated this area to the Roman period, and it was interpreted as a farmstead. A single prehistoric worked flint was also recovered. Later ridge and furrow was evident. A hollow way was noted in the western part of the site. [Au(adp)]

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service
Three trenches were excavated over the site. Two of the three trenches did not revealed archaeological features, although a very small quantity of residual prehistoric, Roman and post-medieval/modern material was recovered from the soils. Within trench 2, these deposits contained a small quantity of Early Bronze Age to Roman pottery. Within the third trench, in the southeast corner of the site, three north-south aligned linear features were observed. These three ditches appeared to be of similar date; their fills were comparable and their orientation was identical. [Au(abr)]

Evaluation at Grange Farm, Bredon, Worcestershire

Mann, A Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2006, 30pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service
An archaeological evaluation found a small number of archaeological remains, all of which were medieval or post-medieval in date. Three small ditches and a pit were identified that most likely related to agricultural activities associated with Grange Farm. A droveway, still visible as an earthwork running north to south across the site, contained significant quantities of limestone rubble and cobbles that were interpreted as a trackway associated with the farm. Occasional sherds of medieval pottery within the topsoil probably resulted from manuring of fields. No evidence of settlement was identified during the evaluation. [Au(abr)]

No deposits of archaeological significance were observed during the evaluation. The sequence of deposits appeared to have derived from the importation and dumping of material, and/or the construction and levelling of the present car park surface during the 20th century. The majority of dumping waste material has either been carried out in order to raise the ground level or more likely infill subsidence. [Au(abr)]

Mercian Archaeology Worcester : Mercian Archaeology, 2006, 24pp, colour pls, figs, refs

Work undertaken by: Mercian Archaeology

The field evaluation encountered two features that whilst could not be date definitively to the medieval period, were suggested as possibly medieval. A linear feature encountered in Trench 2 was interpreted as a possible burgage plot boundary ditch and would therefore have been first cut in the 12th century. The other feature, a wall foundation can only be postulated as medieval and may have dated from the post-medieval period, it was clearly cut by the excavation for a Victorian well. The building assessment determined that both the frontage buildings and the buildings to the east of the yard including the tower were probably late 18th century in date. [Au(abr)]

A Proposed Residential Development at Badsey Road, Evesham, Worcestershire - Results of an Archaeological Evaluation

Adam, N J Chicklade : AC archaeology , 2006, 19pp, colour pls, figs, tabs, refs, CD

Work undertaken by: AC archaeology

An archaeological trial trench evaluation was undertaken and comprised the machine-excavation of 32 trenches totalling c.2880sqm in area and represented a four percent sample of the entire site. The work identified three remnant areas of post-medieval ridge and furrow, along with two undated post holes and a series of later 19th and early 20th century field drains. A single sherd of Roman pottery (Severn Valley ware) was recovered from topsoil during the excavation of trench four. The evaluation confirmed that the site was of low archaeological potential.
