#### **BEVERLEY FRIARY**

#### ***Archaeological Evaluation on land at Beverley Friary***

Adamson, N G Hull : Humber Field Archaeology, 2006, 45pp, colour pls, figs, tabs, refs

*Work undertaken by:* Humber Field Archaeology

An evaluation was undertaken in support for an application for the proposed construction of manager's quarters for the Youth Hostel. The site was part of the Dominican Beverley Friary Scheduled Ancient Monument. A modern path was thought to seal archaeological remains, and an east-west chalk foundation was probably related to the construction of the Friary. Any remains were not thought to be threatened by the development, but a programme of archaeological works was thought to be required. [Au(adp)]

#### ***An Archaeological Evaluation on Land at the Beehive Public House, Keldgate, Beverley***

George, R Hull : Humber Field Archaeology, 2006, 102pp, colour pls, figs, tabs, refs

*Work undertaken by:* Humber Field Archaeology

A sequence of medieval and post-medieval occupation fronting onto Keldgate was encountered. A number of phases of one or more buildings, commencing with a 12th-13th century building robbed and replaced in the 14th-15th century, were recorded. 12th-13th century features such as a ditch, pond, boundary and wall were also encountered. [Au(adp)]

#### **LAND SOUTH-EAST OF 106 WALKERGATE, BEVERLEY**

#### ***Trial Excavations on Land South-East of 106 Walkergate, Beverley***

Tibbles, J Hull : Humber Field Archaeology, 2007, 88pp, colour pls, figs, tabs, refs

*Work undertaken by:* Humber Field Archaeology

Made ground with 13th century structural evidence was the earliest feature to be found on the site. Further 14th century dumping had obscured this, and contained pits with chalk and rubbish backfilled as consolidation. A timber building had been laid on this. This was replaced by a brick building up to the 15th-16th century, which was robbed out in the 17th century and sealed below levelling deposits. The phases of the site were dated by pottery and other finds. [Au(adp)]

*Archaeological Trial Excavation on Land off High Catton Road, Stamford Bridge, East Ridng of Yorkshire*

Adams, K Hull : Humber Field Archaeology, 2006, 79pp, colour pls, figs, tabs, refs

*Work undertaken by:* Humber Field Archaeology

Archaeological remains dating from the Roman to modern periods were found. Ditches representing the delineation of Roman settlement enclosures were recorded in all but one of the trenches, some enclosing pits and ditches representing settlement activity. A boundary ditch for the Roman road running to the south of the site was recorded. Medieval ridge and furrow was encountered across the site. The site was thought to be of regional importance, and recommendations for mitigation were made. [Au(adp)]

*Archaeological Evaluation on Land at Gibson Lane, Melton*

Tibbles, J Hull : Humber Field Archaeology, 2006, 38pp, colour pls, figs, tabs, refs

*Work undertaken by:* Humber Field Archaeology

Several features of possible archaeological interest were recorded, including a series of agricultural ditches and plough furrows that predated the enclosure of the area in c.1773. These were mainly undatable but thought to be from the medieval/early post-medieval periods, with one perhaps dating to

the Iron Age/Roman periods. A small ring ditch containing a central pit was identified and dated to the later post-medieval or modern periods. There was not thought to have been intensive past use of the area. [Au(adp)]

*Archaeological Evaluation by Trial Excavation at 30-32 White Friargate, Kingston-Upon-Hull*

Tibbles, J Hull : Humber Field Archaeology, 2007, 83pp, colour pls, figs, tabs, refs

*Work undertaken by:* Humber Field Archaeology

The earliest feature recorded during the evaluation were ground-raising dumps, from which a small assemblage of 16th century pottery was recovered. A substantial feature, interpreted as a clay quarry, was recorded cutting through these. The backfill of this trench contained well-preserved leather items, thought to be cobbler's stock for recycling, as well as a wooden vertical wattle hurdle. Further dumping had taken place across the site, and pits with 16th/17th century fills were encountered. The rear wall of a building that would have fronted White Friargate and 19th century cellars were noted. [Au(adp)]

Robinson, L Durham : University of Durham, Archaeological Services, 2006, 23pp, colour pls, figs, tabs, refs

*Work undertaken by:* University of Durham, Archaeological Services

The results of the evaluation showed that the majority of the geophysical anomalies were caused by naturally occurring geological features. Evidence in Trench 13 and 14 consisted of the remains of four features. A curvilinear ditch ran across Trench 13; south of this was an oval pit, with a flat base and steep sides, and the end of an east-west ditch. Three sherds of Iron Age or early Romano-British pottery and two sheep/goat maxillary teeth were recovered from the fill of a pit. [Au(abr)]

*Work undertaken by:* Ian Farmer Associates

An archaeological evaluation was carried out and consisted of six trenches. All trenches revealed medieval deposits, which were deposited or redeposited after the demolition of the hospital, St. James. Trenches one, two and five revealed fragments of a medieval cobbled surface, whilst trench six exposed a stretched of cobble road of possibly medieval date. Finally in trenches three and four, short stretches of robber trenches for major walls aligned north-east/south-west which indicated the site of a major medieval structure, possibly the infirmary hall of the hospital. A late medieval hearth was partially exposed in trench 3. [Au(adp)]

*Work undertaken by:* On Site Archaeology

An archaeological evaluation was carried out and sixteen trenches were excavated. To the south of the farm buildings a sequence of features dating to the medieval period and post-medieval period were found. The fields to the west of the farm complex also contained features of medieval date, which again related to the occupation of the priory. These included pits and gullies sealed by medieval to modern ploughsoil, but no evidence for stone masonry buildings/structures. The trenches excavated in this field also found some undated features which may have been of an earlier pre-priory phase of activity. Also the foundations of a medieval wall were found and in another trench evidence revealed substantial robbed walls, which were interpreted to be parts of the original priory complex. These were dismantled during the mid-17th century. This evaluation had shown that in addition to the Grade I Listed building, the site also contained below ground medieval remains relating to the Cistercian nunnery. [Au(adp)]

*Work undertaken by:* Northern Archaeological Associates

Excavation of two trial trenches demonstrated that archaeological deposits had been truncated, with post-medieval surfaces directly overlying natural subsoil both within the existing barn and the yard to the west. A Roman ditch provided a rich assemblage of finds and biological remains. Pottery from the Flavian period to the end of the 2nd or 3rd century, animal bone and building materials all suggested domestic usage. A medieval pit containing 11th or 12th century pottery was also recorded. It was suggested that ground reduction at the site would eradicate all archaeology, and in the event of such a scenario, total excavation would be necessary to achieve preservation by record. [Au(adp)]

Nine evaluation trenches were excavated in advance of development for warehousing and light  
industry. Five of the trenches examined anomalies seen by a geophysical survey. Three trenches  
examined geophysically blank areas, whilst the remaining trench spanned the entire width of the site in  
order to intercept the possible course of the Norton Three Dikes, a prehistoric land boundary which was  
thought to pass through the site, but was not identified by the geophysical survey. Only in trench seven  
an anomaly proved to be of man-made origin and was a recent limestone filled field drain. Trench three  
revealed a shallow ditch or furrow. There were no traces of the Norton Three Dikes. [Au(adp)]

Archaeological investigation revealed activity from the Iron Age to the early medieval period. Continuity was demonstrated by the one feature common to all phases, the double ditched trackway or its predecessor, whilst Phase 2 saw the beginning of ditched enclosures appended to this routeway in the Late Iron Age, a process that developed further in the Romano-British period (Phase 3) when it was thought that the trackway was defined by side ditches. Post-Roman settlement (Phase 5) was represented by a palisaded enclosure and a number of other features to the east of the trackway. Post-medieval features included three dew ponds and two lines of post holes which related to temporary land divisions (Phase 6) [Au(adp)]

Archaeological Services WYAS Malton : Archaeological Services WYAS, 2007, 192pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Services WYAS

An archaeological evaluation and watching brief was carried out. Excavation confirmed that the long distance prehistoric earthworks known as the Argham Dykes ran through the area and that the parallel ditches had two distinct phases. No dating evidence was recovered and the postulated Late Bronze Age date for the construction of these features could not be confirmed. A later phase consisted of an Iron Age enclosure. The ring gullies of two round houses were the only evidence which suggested occupation within this enclosure. Other features included pits, post holes, part of an Iron Age and Romano-British field system, medieval quarry pits and medieval or post-medieval plough marks. An inhumation of juvenile human remains were recovered from a pit. Finds included Iron Age and Romano-British pottery, medieval and Neolithic pottery and small amounts of flint, animal bone and shell. The only copper alloy find was a loop fastener. [Au(adp)]

Stephens, M Malton : MAP Archaeological Consultancy Ltd, 2006, 67pp, colour pls, figs, refs

*Work undertaken by:* MAP Archaeological Consultancy Ltd.

The evaluation consisted of four trenches. Trench 1 showed evidence of undated features including a stone-lined drain cutting into natural boulder clay. A drain utilising glazed pipes was also present. A undated linear feature ran on a north-south alignment across Trench 2. In Trench 3, four parallel linear cuts of post-medieval date were believed to relate to clay extraction for brick making, with similar features being recorded in Trench 4 and related to the Trench 2 linear feature. A well-built sandstone foundation cut across the linear features and was butted by a later brick-built structure. A small number of possible post holes/pits in Trench 4 pre-dated a linear feature that aligned with the example in Trench 2. A relatively recent northwest-southeast aligned sandstone wall foundation was recorded at

the eastern end of the trench. A small assemblage of finds comprised flint flakes and chunks and medieval and post-medieval pottery sherds. [Au(abr)]

Dunbar, L Twickenham : AOC Archaeology Group, 2006, 122pp, figs, tabs, refs  
*Work undertaken by:* AOC Archaeology Group

A phased programme of archaeological works was carried out in respect to a proposed development at Scarborough Business Park. A fieldwalking survey retrieved a lithic assemblage, while the borehole survey recorded a small area with peat deposits probably occupying a kettle hole and a possible palaeochannel. No significant features nor artefacts were unearthed by the phase one evaluation trenching. Phase two uncovered a scattering of small truncated pits and linear features with two areas containing significant ditches. A small assemblage of probable Late Iron Age/Romano-British pottery was recovered, some of which came from the ditch features. Further unstratified flint was also recovered during the course of the phase two works. [Au(adp)]

Dickson, A York : On Site Archaeology, 2006, 33pp, pls, figs, tabs, refs  
*Work undertaken by:* On Site Archaeology

An archaeological evaluation was carried out. The evaluation concluded that due to the truncation and/or the limit to the depth of the excavation, the pre-Roman topography and evidence relating to settlement of a late prehistoric date, or earlier, was not identified within the excavated trenches. Similarly, no evidence for pre-Norman activity was recorded from any of the trenches. A post hole or pile of post-medieval date and two linear slots dating to the early modern period were found. The latest of these features was sealed by either dumping and/or by made-up ground in trench one while trenches two and three contained evidence for recent construction activity only. [Au(adp)]

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2006, 44pp, figs, tabs, refs

*Work undertaken by:* Northern Archaeological Associates

Archaeological features of a prehistoric date were found in nine of thirteen trenches excavated. These were concentrated around the ridge and corresponded with anomalies from an earlier geophysical survey, and included boundary ditches and an enclosure bounded by a double-ditched feature. Pits containing burnt material were encountered, and it was thought that the site was occupational in nature. Further excavation was required in order to provide important information relating to prehistoric settlement in South Yorkshire. [Au(adp)]

*Work undertaken by:* Pre-Construct Archaeology (Lincoln)

An archaeological evaluation of 4% a sample area was excavated. This consisted of 2 trenches. Both trenches exposed evidence of truncation by modern buildings. In Trench 1, whilst it was possible to

identify a surface associated with building remains, these were deemed to be modern. In Trench 3, demolition rubble from a cellar extended to 2m below the modern ground surface. It was noted, however, that hand made bricks from an earlier building were evident within the rubble and may have been incorporated into the fabric of the modern structure. [Au(abr)]

Dransfield, N & O'Neill, RSheffield : ARCUS, 2006, 89pp, colour pls, figs, tabs, refs

*Work undertaken by:* ARCUS

An archaeological evaluation was carried out during Phase 1 and 2 of the Rotherham Westgate demonstrator project (Sites 3 and 5). At site 5, structures relating to a public bath from the late 19th to late 20th century were identified. At site 3, structures relating to a 19th century Market Hall were identified. Trench 2 contained evidence of wheel ruts and paving edges that could have related to a path and roadway separating two Inns and other buildings from the 1820s Corn Exchange and Butter Market. In Trench 3, evidence for the Market Hall buildings constructed in 1879 and 1888 were found. In Trench 4, a large stone wall pointed to evidence for a revetment wall. Other archaeological evidence included pits, drainage channels and evidence for levelling also existed. [Au(adp)]

chan, B Sheffield : ARCUS, 2006, 87pp, colour pls, figs, tabs, refs

*Work undertaken by:* ARCUS

An archaeological evaluation was carried out at Templeborough. The site was known to have contained the remains of a Roman fort with three phases. The evaluation indicated that despite heavy disturbance associated with the building of the Rolling Mill, parts of the fort and its surrounding vicus still survived. Preservation was differential across the site with heavily truncated remains of the vicus surviving to the north of the main Rolling Mill building with more extensive truncated remains of the ditches of the fort surviving to the south. It appeared that dumping of made ground in the southeast portion of the site had preserved and sealed parts of the vicus in the form of a post hole, pit and associated Roman ground surface revealed in Trench 6. ***An Archaeological Evaluation Report For Rawmarsh Rectory, Rawmarsh, Rotherham, South Yorkshire***

Holderness, H Sheffield : ARCUS, 2006, 28pp, colour pls, figs, tabs, refs

*Work undertaken by:* ARCUS

An archaeological evaluation was carried out at Rawmarsh Rectory. It comprised a watching brief, a map survey and mitigation procedures. During the watching brief, two slabs of worked stone set at right angles were encountered and the trench was centred on these. It was thought that these blocks could have been a wall as it ran parallel to the existing boundary, but on excavation it was found to be the top to a stone covered drain. The only other feature in the trench was a small dump of pottery and kiln furniture dating from the 18th and 19th centuries. Both of these features had been cut into the bedrock. [Au(abr)]

Bell, S Sheffield : ARCUS, 2006, 90pp, colour pls, figs, tabs, refs

*Work undertaken by:* ARCUS

An archaeological evaluation was carried out at the Sheffield Student Village. Thirty-one trenches were excavated and nine test pits. The majority revealed that the ground had been heavily disturbed as 20th century drains and footpaths were revealed. Some of the area was formerly used as allotment gardens. Two trenches close to Endcliffe Vale Road contained features relating to Endcliffe Vale House, part of the late 19th century development of the area, including house wall foundations and the possible

remains of terracing in the grounds. No artefacts predating 1900 were recovered during the evaluation. [Au(adp)]

Dransfield, N Sheffield : ARCUS, 2006, 20pp, colour pls, figs, tabs, refs

*Work undertaken by:* ARCUS

An archaeological evaluation was carried out and two trenches were excavated. Trench one revealed walling and passages, which probably related to the subterranean cellars connected to the north of the cementation furnaces shown on the 1896 Goad Plan. Remains of a structure and the possible crucible furnace were found and evidence for demolition and levelling, as well as rebuilding. Trench 2 revealed evidence of flues, chimneys, flat brick floor surfaces and remnant walling, which were probably connected with the process of bulk steel production. [Au(adp)]

Martin, L Morley : Archaeological Services WYAS, 2006, 149, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Services WYAS

An archaeological evaluation was undertaken on the site of proposed redevelopment at St. Peter's church and identified a complex sequence of archaeological deposits mainly pertaining to post-medieval burials. 24 partial skeletons and over 2700 fragments of disarticulated bone were recovered from two small trenches. Many of the burials were noted within the degraded remains of wood coffins. Associated coffin furniture was also recovered from many of the graves. Below these graves an intriguing compact deposit was identified which may have represented part of an earlier structure, a levelling deposit or natural. [Au(adp)]

Bradley, J Lancaster : Oxford Archaeology North, 2006, 66pp, colour pls, figs, tabs, refs

*Work undertaken by:* Oxford Archaeology North

An archaeological evaluation confirmed the presence of subsurface archaeology on the site dating from the 12th or 13th centuries to the 20th century. Medieval evidence was found in one trench beneath a cellar suggesting that there had been ground raising. Late 18th century activity included the wide spread construction of cellars across much of the site. The presence of a burial confirmed the location of a disused cemetery. Redevelopment of the area would have had an impact upon the archaeology of the site. [Au(adp)]

*Work undertaken by:* Field Archaeology Specialists Ltd.

A series of deposits were recorded during an evaluation as part of a new development on the site. Medieval remains were represented by a series of pits, possibly denoting domestic activity potentially associated with occupation towards the frontage of the site. This was thought to date to the 14th or 15th century. More limited post-medieval activity in the form of pits and a culvert were also present, overlain by levelling deposits that predated the 1930s/1940s construction of the garage complex. [Au(adp)]
