OVERHEAD LINE DIVERSIONS AT M1 JUNCTION 10

Overhead Line Diversions At M1 Junction 10, Archaeological Mitigation

Preece, T Bedford : Albion Archaeology , 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

As part of the programme to widen the M1 motorway at Junction 10, archaeological observations were made of works relating to overhead power line diversions in the vicinity of the junction. Archaeological Zone 1 (AZ1) covered the western side of the development area within Bedfordshire. Two pylon footings (PBA14 and PBA15) along with an access road and a cable trench were excavated in this zone. No archaeological features were identified within this area. However, modern root disturbance, associated with the present hedgeline, was identified adjacent to Newlands Road. Archaeological Zone 2 (AZ2) covered the eastern side of the development area within Bedfordshire. Two pylons (PBA12A and PBA13) were erected in this zone and a cable trench was excavated. Three ditches [3707], [4002] and [4302] that were likely to be part of a field system were identified. Archaeological Zone 3 (AZ3) covered the southern part of the development area and was split into two areas: the northern area (AZ3N) covering the land within Bedfordshire and the southern area (AZ3S) covering the land within Hertfordshire. In AZ3N, footings for three pylons (PBB93, PBB94 and PBB95) an access road and a cable trench were excavated. The only archaeological feature to be identified was a ditch [4502] that may have been the continuation of one of the ditches located in AZ2. In AZ3S, four pylon footings (PBB89, PBB90, PBB91 and PBB92) and an access road were excavated. Ditch [5] and a boundary ditch for Chalk Wood were identified in this zone. A layer of mid brown silty clay colluvium (3) had developed in the base of the dry valley on the northern side, possibly indicating an extended period of arable cultivation, destabilising the soil and resulting in downslope soil movement. A 15m wide band of modern disturbance (9) was also noted, approximately 60m north of PBB89. This area was adjacent to the overhead power lines running east-west across the field and was, therefore, likely to define an access route associated with the erection of these power lines. The Wixams, Elstow, Bedfordshire. Archaeological Mitigation of Area 3 (RPS 84)

Bell, A Bedford : Albion Archaeology , 2006, 12pp

Work undertaken by: Albion Archaeology

The works required an open area excavation. Non-intrusive evaluation work had already been completed in the area and identified an area of burnt material that might possibly have represented kiln material. Two north-east to south-west furrows were recorded. These represented the ploughed out remnants of a medieval and/or post-medieval ridge and furrow open field system. No artefactual or physical remains were identified that could have represented kiln material. [Au(abr)]

Work undertaken by: Archaeological Project Services

The investigations revealed a sequence of natural, undated and medieval deposits. Undated features included three gullies and a subsoil. Two of the gullies were parallel and may have represented a short length of trackway. Medieval deposits comprised two furrows of the ridge and furrow field system. No features that could be associated with the known Romano-British or prehistoric remains along the pipeline route were identified. Finds retrieved during the investigations included a single prehistoric flint flake, a small quantity of medieval and later pottery, post-medieval tile, a fragment of 20th century glass and an animal bone. Work undertaken by: Heritage Network

Within the tower, beneath the existing tiled floor, a fired clay surface bounded by two courses of 18th or 19th century brick was recorded. Adjacent to this a thin layer of sooty material was noted, overlying a layer of clench and chalk. This feature may have represent a setting for a free-standing stove. Some unstratified and disarticulated human bone was recovered, as well as fragments of brick and tiles. *An in situ* grave slab was also noted. A pit for the septic tank was located in an area free of marked graves. A significant quantity of disarticulated human bone, including 20 skulls, was also collected. A medieval antler parchment eraser and pricker was recovered from the unstratified material within the pit. [Au(abr)]

The Chilterns Gateway Centre, Dunstable Downs, Bedfordshire. Programme of Archaeological Observation, Investigation, Recording, Analysis and Publication

Keir, W Bedford : Albion Archaeology, 2007, 24pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

The programme of archaeological observation was carried out between 7th November 2005 and 8th August 2006, and involved the monitoring of the excavation of building and service trenches, as well as ground reduction associated for facilities such as access roads, footpaths and car parks. The only archaeological features revealed during the programme of archaeological observation and investigation was a post-medieval/modern quarry pit and two smaller modern pits. One of the smaller pits contained a dump of 20th century slag and fuel waste material and was nearby and similar to a feature previously investigated during the trial trench excavation. These two features appear to be associated with a group of discrete anomalies identified by the previous geophysical survey. [Au(abr)]

34-38 NEWNHAM ROAD, CAMBRIDGE (II)

Further Investigations at 34-38 Newnham Road, Cambridge

Timberlake, S & Webb, D Cambridge : Cambridge Archaeological Unit, 2006, 48pp, colour pls, figs, refs

Work undertaken by: Cambridge Archaeological Unit

An ongoing watching brief of building excavations beneath an area of new wall being undertaken at nos. 34-38 Newnham Road provided further evidence of the nature and extent of a medieval pond in the backyard, whilst at the level of mid-late 18th century "cellar" (beneath 36a) building excavations had exposed the foundations for what were in all probability a series of 17th century tenements fronting Newnham Road. An archaeological test pit revealed a still earlier floor surface underlying the levelling/make-up layers for these brick buildings which might have related to a 16th century or earlier timbered house. Below this a layer of garden soil containing sherds of 15th century coarseware suggested a still earlier phase of intensive backyard cultivation, perhaps associated with medieval dwellings on Maltins Lane or Elde Newnham Weye. Behind this area of garden, the large pond may originally have been excavated as a gravel pit, then flooded and used as a fishpond, perhaps associated with the nearby Mortiner's Mill, or the fishponds, adjacent to the mill dam lease by St. John's Hospital. Evidence for some sort of sophisticated water management here had turned up in the form of sections of probably 15th century ceramic water pipe- a potentially important find. In addition, some well preserved but probably broken and therefore discarded fragments of a 15th century leather shoe were recovered from the base of the pond. [Au(abr)]

BLOCK FEN B (AREA 5), CHATTERIS

Block Fen B (Area 5), Chatteris, Cambridgeshire. An Archaeological Excavation. Interim Site Narrative

McConnell, D Hertford : Archaeological Solutions, 2006, 54pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The current phase of archaeological excavations recorded several "naturally" formed features such as tree hollows and animal burrows. The exception to these was a large Bronze Age ring ditches and associated pits. The large ring ditch surrounded and was covered by the remains of a mound forming a possible barrow. Rather unusually an entranceway through the ring ditch was formed by two clearly defined termini facing south-west. Within the confines of the ring ditch, a large pit was located along the north-western boundary, containing what appeared to be "feasting" deposits- large amounts of charcoal and burnt animal bone, flint debitage and pottery fragments. Woolhouse, T, McConnell, D, Weston, P, & Grassam, A Hertford : Archaeological Solutions, 2006, 41pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The excavation revealed twenty-five archaeological features in Area 1, the majority of which were dated to the Late Iron Age/early Roman period. The features consisted of pits, post holes, a waterhole and ditches, which may have formed two enclosures. A group of five post holes were located within the eastern enclosure, but they did not form a coherent structural arrangement, and only one contained Iron Age material. The possible western enclosure was associated with a waterhole and four pits. A number of features produced Belgic Ware pottery. A medieval pit and a modern boundary were also excavated. No archaeological remains were revealed in Area 2. [Au(abr)]

Grassam, A, Mundin, A, Trott, K & Woolhouse, T Hertford : Archaeological Solutions, 2006, 30pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The excavation revealed a series of linear features and sparse pits, which yielded finds from the prehistoric, 15th to 17th century and the 17th-18th century. However, the pottery assemblage was very small and abraded and there was a chance all of the features were post-medieval to early modern in date. One re-cut linear feature was thought to be a boundary shown on the 19th century maps. The pit may have been associated with quarrying. [Au(abr)]

LAND AT THE CHURCH HALL, CHURCH LANE, MARCH*Archaeological Watching Brief on Land at the Church Hall, Church Lane, March, Cambridgeshire*

Mellor, V Sleaford : Archaeological Project Services, 2006, 32pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Project Services

The investigations revealed evidence of activity on the site spanning the Saxo-Norman, medieval, post-medieval and modern periods, and indicated prehistoric activity in the vicinity. Three sherds of Late Iron Age pottery and a possible Iron Age loom weight indicated that settlement at this time may have extended into the area of the site, and a Bronze Age scraper provided evidence of still earlier activity. Medieval occupation of the site was indicated by a pit, all of 12th to 13th century date, along with the remains of what may have been the 15th to early mid-17th century ground surface. An undated pit and possible post hole may also have been of 12th to 13th century or perhaps earlier date. A single burial was encountered comprising a wooden coffin in a brick-built vault of probable late 19th century date. The use of the area as a graveyard ended in the late 19th century, and buildings subsequently occupied the site. [Au(abr)]

THE MARCH TO CHATTERIS ANGLIAN WATER PIPELINE

Bronze Age, Iron Age and Romano-British Archaeology on the March to Chatteris Anglian Water Pipeline, Cambridgeshire

Jones, M Castle Hill : Cambridgeshire Archaeology, 2006, 76pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

The pipeline route stretched for 6km from Chatteris to Wimblington. The evaluation determined the presence of increased activity in Trench 13 and funeral pyre activity in Trench 17. The remains dated from the Neolithic/Bronze Age to the Romano-British period, and also to the late or post-medieval periods. The main phase of occupation appeared to have occurred from 3rd century BC to mid 3rd century AD and was centred around Trench 13. Archaeological remains were characterised by enclosures and other boundary ditches in a landscape used primarily for keeping livestock, particularly throughout the Iron Age and Romano-British periods. Artefacts recovered, including loom weight fragments and quern stones, suggested that domestic activities such as weaving and grinding/milling were taking place in the vicinity, although there was no direct evidence for domestic occupation itself. 6 RECTORY ROAD, BLUNTISHAM

6 Rectory Road, Bluntisham, Cambridgeshire. Summary Excavation Report

Burrow, A & Mudd, A Northampton : Northamptonshire County Council, 2006, 3pp, figs

Work undertaken by: Northamptonshire Archaeology

Based on the stratigraphic evidence there were three phases of activity relating to the main late Iron Age occupation, with major ditches. Elsewhere there were fewer intercutting features and at this stage it seemed unlikely that most features would be able to be assigned to any of these three phases. There was a Bronze Age pit, Iron Age ditches, an undated crouched human burial, and undated post holes. [Au(adp)]

Archaeological Recording and Evaluation Old Estate Yard, Over End, Elton, Cambridgeshire

Carlyle, S Northampton : Northamptonshire County Council, 2006, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

Archaeological remains, probably dating to the medieval period, comprised a probable boundary ditch, two smaller ditches following the curving embankment of the hollow way, two pits or small ditch terminals and a possible pit or tree throw scar. A junction between two ditches in the northwest corner of the site probably dated to the late medieval or early post-medieval period, although this feature had been extensively truncated by modern services and groundwork. Other activity on the site dated to the 19th and 20th centuries. A large pit containing iron working slag may have been associated with the activities of James Hayes, inventor of the mechanical straw elevator, who worked out of the workshops in the yard in the 19th century. LAND ADJACENT TO 79 HIGH STREET, OFFORD D'ARCY

Land Adjacent to 79 High Street, Offord D'arcy, Cambridgeshire. Interim Archaeological Evaluation Report

Evans, G Salisbury : Wessex Archaeology, 2006, 29pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

Three distinct areas of archaeological preservation were encountered. A 12th century ditched enclosure was identified in the eastern part of the site, as well as a contemporary pond and a Roman quarry pit. A series of post-medieval to modern channels were also identified to the west of this area. A clay lined circular pit was recorded in the south-west of the site and dated to the 13th or 14th centuries. In the north west of the site a modern sunken garden had eradicated any archaeological remains. [Au(adp)]

THE RICKETT FIELD SITE, GRANTA PARK, GREAT ABINGTON

The Rickett Field Site, Granta Park, Great Abington, Cambridgeshire: Report on the 2006 Excavation

Armour, N Cambridge : Cambridge Archaeological Unit, 2006, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridge Archaeological Unit

Archaeological excavation and test pitting carried out at Rickett Field revealed scatters of Mesolithic-Early Bronze Age worked flint but few definable prehistoric features other than a single Early Iron Age pit containing knapped flint and 24 sherds were located, although six abraded sherds were recovered from the fills of later features and from the buried land surface, suggesting at the most, an area of pasture or only minor cultivation during the Roman period. One probable medieval ditch associated with a field system and blocks of ridge and furrow was identified, alongside a number of post-medieval field boundaries and tree planting holes for a mid-late 17th century tree-lined avenue, probably of Walnut Tree Walk shown on the 1716 map of Abington Hall and its estate. THE CHELMSFORD PARK AND RIDE PHASE II SITE, SANDON

An Archaeological Excavation at the Chelmsford Park and Ride Phase II Site, Sandon, Essex

Holloway, B & Brooks, H Colchester : Colchester Archaeological Trust, 2007, 37pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

The excavation revealed evidence of late Bronze Age activity, shown by a series of post holes which may have included elements of domestic structures. Finds of spindle whorls and oven debris suggested a domestic occupation and a local economy that must have included an element of pastoral farming. Two groups of cremation burials indicated a cemetery area, contemporary with the domestic site. A series of later field ditches demonstrated late Bronze Age farming, with pits showing some activity here in the Middle Iron Age. [Au(abr)]

VANGE MARSH NORTH, VANGE

Vange Marsh North, Vange, Essex. Archaeological Monitoring

Ennis, T Chelmsford : Essex County Council Field Archaeology Unit, 2006, 31pp, colour pls, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

A monitoring exercise with regard to the construction of a new wildlife reserve found evidence for past activity at the site. Two features, a possible red hill and a pit, may both have been associated with salt

extraction activities located on the marsh edge. No dating evidence was forthcoming but it was likely that they were of Roman origin. Medieval layers and water channels were identified indicating localised activity, including arable farming and possible nearby occupation. An extensive carbonised grain deposit was recorded, and may have suggested a large combustive event. Water channels may have indicated the transport of grain by water. Other water channels were undated or of modern origin. [Au(adp)]

GREAT NOTLEY, NEAR BRAINTREE

An Archaeological Excavation at the "Skyline 120" Business Park, Great Notley, Near Braintree, Essex

Holloway, B Colchester : Colchester Archaeological Trust, 2006, 42pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

The principal discovery of the excavation was an enclosure, probably a farmstead, established in the late Iron Age and enlarged by the addition of an outer ditch in the 1st-2nd century AD. The farmstead was cut by a ditch on a different alignment in the 2nd century AD, probably indicating abandonment of the settlement and the introduction of agricultural or pastoral farming. Other ditches suggested further subdivisions of the landscape. Finds other than pottery were not plentiful, but the presence of loom weights, briquetage and structural clay demonstrated a domestic settlement based on an agricultural economy. A few pits and post holes were the only features to survive heavy plough damage. [Au(adp)]

Germany, M Chelmsford : Essex County Council Field Archaeology Unit, 2006, 24pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

Archaeological work was undertaken in advance of the construction of a sand and gravel extraction plant. Prehistoric worked flint, Middle Iron Age features and finds, a small amount of Late Iron Age/Roman pottery and two post-medieval/modern field ditches were recorded. The Iron Age features comprised pits and post holes and were located in two separate areas. These features were thought to represent settlement at the site. The other results suggested that the site was woodland or scrub for most of its history. It was unlikely that the site contained extensive or significant archaeological remains. [Au(adp)]

An Archaeological Excavation of A Foundation Trench at the Drama Block, St. Helena School, Sheepen Road, Colchester, Essex

Orr, K Colchester : Colchester Archaeological Trust, 2006, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological investigation at the site revealed pits, ditches and a gully all dating from AD 560. The type of pottery and the presence of animal bone, slag, daub and Roman tile suggested domestic and industrial use of the site similar to that already observed at Sheepen. [Au(adp)]

Excavations on the Cattawade Marshes

Hillman-Crouch, B J Chelmsford : Essex County Council Field Archaeology Unit, 2006, 12pp, colour pls, refs

Work undertaken by: Essex County Council Field Archaeology Unit

Excavations on behalf of the RSPB recorded a causeway that had been built out of the remains of Bendall's factory and deposited on Lock Piece in the 1970s. Many of the ditches were backfilled by machine to accommodate the building of an airfield at the same time. A huge raft of building waste was tipped onto the saltings in the 1970s during the building of the estates in Lawford. No ancient remains were recovered due to the shallow nature of the excavations. Ginns A, Weston P, Woolhouse T & Barton T Hertford : Archaeological Solutions, 2006, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

Three trial trenches and an open area investigation in the core of the historic town, between the junction of two Roman roads, revealed five pits, three post holes, one ditch, a pottery kiln with a surviving flue, and one feature of unknown function. These features dated from the Roman to modern periods. The pottery kiln was thought to represent a Roman industrial site on the edge of town, with medieval pits from the 12th-14th centuries representing roadside occupation associated with the market. Two pits were of modern date, and a further pit and three post holes were undated. [Au(adp)]

Kaye, D Letchworth : Heritage Network, 2006, 6pp, figs, tabs, refs

Work undertaken by: Heritage Network

A trench was cut through a mixture mainly of thick clay and some brick and tile, changing to gravel made ground at the western end. The clay probably represented the spoil dug for the footings of the present church. The waste pipe ran from the vestry north-east and joined the main sewer beyond the church boundary. The ground in this part of the churchyard contained significant quantities of brick and peg tile which probably represented debris from the nearby church which was demolished in 1870 or its medieval predecessor which was demolished in 1803. A single piece of worked stone, probably from a door jamb, was recovered from this trench. No human remains were encountered. [Au(abr)]

Hudson, A Letchworth : Heritage Network, 2006, 11pp, pls, figs, tabs, refs

Work undertaken by: Heritage Network

The works included the clearance of all debris from within the WWII airfield defences, the fitting of secure doors, shutters and fences. The structures in ten defined areas were cleaned and found to contain mainly redeposit soil, modern building debris and items of modern rubbish. Some graffiti, contemporary with the structures' wartime role, was observed and recorded, and a fragment of newspaper from 1947 was collected. The battle headquarters in Area 13 was found to be flooded and no clearance works were undertaken. [Au(abr)]

Simmelmann, K Milton Keynes : Archaeological Services & Consultancy Ltd, 2006, 36pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd.

The earliest archaeological remains revealed were medieval ditches, which suggested that the site was largely peripheral to pre-medieval settlement activity, but that it may have been incorporated into the agricultural system by the later medieval ages. Much of the archaeological activity on the site appeared to have been associated with the farm and was of fairly recent date. A few post-medieval features were encountered, a closer date for which was not possible due to the paucity of associated finds. [Au(abr)]

VALE CEMETERY, LUTON***Vale Cemetery, Luton. Phase 1 Archaeological Investigation. Summary Report***

Albion Archaeology Bedford : Albion Archaeology, 2006, 6pp, figs, tabs

Work undertaken by: Albion Archaeology

A continuation of the medieval ditch investigated during trial trenching was revealed in Zone 2. A ditch in Zone 1, previously interpreted as medieval from artefacts recovered during the evaluation, now appears to be of a later, post-medieval date. Zone 1 contained seven tree throws and Zone 2 contained one tree throw. The investigation of these features may indicate that the un-phased irregular features previously revealed in Trench 8, may also have been tree throws. Only one feature of possible medieval date was encountered in Zones 1 and 2, confirming that the majority of archaeological remains were focused in the western half of the proposed development area. EARTHWORKS IN CROXTON, NORFOLK

Rapid earthwork survey for Forest Enterprise SCCAS. Report no. 2006/40

Craven, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

A rapid earthwork survey of forestry compartments in Croxton was carried out in order to identify whether any earthworks existed which would be affected by development, and would require protection from a planned programme of de-stumping. No earthworks thought to be of significance were observed in any compartments surveyed. The pits were probably post-medieval marl or chalk extraction pits. The ditch and bank were most likely related to former field systems predating the use of the land for forestry. [Au(adp)]

LAND OFF BRANDON ROAD, SWAFFHAM

Land off Brandon Road, Swaffham, Norfolk. Archaeological Investigation

Luke, M Bedford : Albion Archaeology, 2006, 25pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

The investigation has provided information on two ditches. Although dated by small and abraded quantities of pottery, it was likely that one of these ditches was Iron Age and the other Roman. The nature of the finds, deposits within the ditches and absence of isolated features such as post holes and pits in their vicinity strongly suggested that they were located some considerable distance from settlement. The evaluation suggested that Roman peripheral settlement remains were present in the eastern most 60m of the study area. The area in between was been evaluated by ten trenches and no archaeological features or finds were located. [Au(adp)]

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was required as a condition of planning application for a rear extension to the property. As a result of likely ground disturbance to the rear of the Listed building, a site visit was made. The location was thought to have had much earlier origins as a settlement and may represent an early medievalcroft. The footing trenches failed to reveal any archaeological features. The trench layout and soil profiles were recorded, together with a search of any spoil for finds which may offer dating evidence. This also failed to provide any additional evidence. [Au(abr)]

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out at the site as a condition of planning application, where an extension to the rear of the Listed property was proposed, in addition to adaptations to the existing building, this was to enable future use as a pharmacy. The building work includes the demolition of nineteenth century additions to the rear of the structure and lowering of ground levels. However, in spite of a thorough examination of all deposits, the monitoring produced only a single archaeological feature, a pit with associated finds. In addition, a single late medieval architectural element was observed and recorded. This was the remains of a mullion window seen when an original wall-plate was exposed as a result of creating increased access to the rear of the property. [Au(adp)]

ARCHERS FARM, LITTLE WALDINGFIELD**Archaeological Monitoring Report - Archers Farm, Little Waldingfield**

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2007, 13pp,

colour pls, figs, refs, CD

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out Archers Farm, Little Waldingfield as a condition of planning consent. The development included the conversion of former agricultural buildings, a new dwelling, on the site of the former farmhouse and extensive landscape work. The site contained a range of former farm buildings associated with Archers Farmhouse. The farmhouse was virtually destroyed by fire a few years ago, but was a Grade II Listed building of eighteenth century date or earlier with later additions (LBS No. 278126). Archaeologically significant concentrations of pottery fragments and metal objects had been located within a half kilometre radius of the site, the items covered a wide range of dates from prehistoric to the medieval period. The site was visited on three occasions, in order to examine all phases of ground disturbance. This included footings for the restoration of a timber-framed farm building, an extensive area of ground reduction on the site of the former farmhouse, pond excavation, access road provision and the excavation of garage footings. However, the site only produced evidence of post-medieval activity, mainly from the eighteenth to twentieth centuries, probably associated with the more recent working life of the farm. [Au]

Gill, D Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 17pp, colour pls, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

A watching brief for the new installation of new drains demonstrated that archaeological deposits associated with the earlier medieval buildings and occupation survived on site. Evidence of structural features, probable pits and occupation layers were recorded and indicate that the extent of this activity seems to coincide fairly precisely with the footprint of the present hall and service yard. This supported the theory that the current hall was built over the site of the previous medieval manor house. There were no medieval deposits beyond the area of the hall but this might have been due to landscaping that had occurred to shape the current grounds and indicated that pre-16th century ground levels were still intact. REAR OF 'GIFFORDS', LOWER ST. STRATFORD ST. MARY

Monitoring Report - Rear of 'Giffords', Lower St, Stratford St Mary

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 3pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out as a condition of planning application for the site. The development would consist of a single house with integral garage. The site area measures approximately 21.0 by 15m in total and within this area around 70metres of footing trenches were dug. The monitoring visit was made, when it was possible to examine all of the recently dug open trenches and also a large quantity of the spoil. The site failed to produce any observable evidence of activity prior to the nineteenth century. The majority of the ceramic and glass material found within the spoil was probably twentieth century in date. [Au(adp)]

Everett, L & Goffin, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 19pp, colour pls, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The watching brief observed various pits and layers of medieval and post-medieval date suggesting various phases of activity. Finds included a glazed ridge tile and ceramic table wares, suggesting a building of affluence in the proximity. The earliest pottery from the site was of 11th-12th century date but was from a context containing later medieval finds. [Au(adp)]

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was required in conjunction with this project, the purpose of which was to lay high voltage electricity cables below ground. The cables were replacements for existing overhead lines and the route of the trenches approximately followed the existing line configuration. The priorities of the archaeological monitoring were to ensure the protection of two Scheduled barrows and to observe and record any additional archaeological information which may have been revealed. Monitoring was particularly recommended by English Heritage and Suffolk County Council in view of the potential for barrow clusters. [Au(abr)]

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out as a condition of planning consent at the site. A single visit was made, when it was possible to inspect footings, service trenches and lowered ground surfaces, along with a small quantity of upcast soil. The development proposal was for a number of single storey dwellings constructed on a natural north to south slope near to a group of existing houses. The site covered an area of approximately 2,000 square metres to the north of Chalk Hill Lane. No archaeological features or finds were observed or recovered during the monitoring visit. [Au(adp)]

WEST STOW ANGLO-SAXON VILLAGE PERIMETER FENCE*West Stow Anglo-Saxon Village Perimeter Fence. A Report on the Archaeological Monitoring, 2006*

Gill, D Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 11pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Monitoring of the construction of the new perimeter fence around the Anglo-Saxon Village at West Stow examined the excavation of c.190 post holes around the circumference of the village. Each hole was small diameter and c.0.8m deep but the frequency of them provided a useful plot of the soil profile and indicator of preservation. A deep layer of dark soil, interpreted as an occupation soil was recorded on the north-west side of the village which had not been sampled by the earlier excavation. [Au]

ROAD IMPROVEMENTS SCHEME AT A14 ROOKERY CROSSROADS, BURY ST. EDMUNDS*Report on an Archaeological Watching Brief Associated with Road Improvements Scheme at A14 Rookery Crossroads, Bury St. Edmunds, Suffolk*

Birks, C Norwich : Chris Birks archaeological Services, 2006, 56pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Chris Birks Archaeological Services

The archaeological works consisted of a watching brief which did not identify any archaeological features or finds. The comprehensive watching brief was carried out at three sites; Two Mile Spinney, Rookery Crossroads and Millfield Plantation. Few archaeological remains were encountered. Activities in the area during the Mesolithic, Neolithic, Bronze Age and Iron Age were indicated by the recovery of struck flints mostly from subsoil deposits. Previously unknown archaeological remains were revealed at Rookery Crossroads and comprised medieval and post-medieval ditches probably representing land partition and agricultural use during these periods. There appeared to be no correlation with earthworks identified at this location, confirmed as being of 19th century date. The results of a topographical survey of these earthworks within the road corridor to the north of Ravenwood Hotel and the two mounds at Two Mile Spinney were presented. The relocation of a milestone at Rookery Crossroads was carried-out and required a photographic survey to be made. No archaeological remains were present at Millfield Plantation and there was no evidence for the existence of a Roman Road postulated to have been in this area. [Au(abr)]

EARTHWORKS OF WEST STOW

Rapid earthwork survey for forest enterprise SCCAS report no. 2006/66

Craven, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs
Work undertaken by: Suffolk County Council Archaeological Service

A rapid archaeological earthwork survey of forestry compartments in West Stow was carried out, in order to identify any earthworks which would be affected by and would require protection from the planned programme of de-stumping. No significant earthworks were observed. The linear bank seen in 5325b was a former ride marked on the current OS map and continued through a gap in the trees to the east. It did however originate from an earlier boundary shown on the first edition OS as separating West Stow Heath from open fields and it was suggested that care should be taken during the de-stumping process to cause minimum of damage to the bank. Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, refs

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out as a condition of planning application at the site. A single monitoring visit was made. The development consisted of two small extensions to the existing dwelling located within the side and rear garden areas. The footings, which had been dug for a garage situated immediately to the northwest, were also examined. Around forty linear metres of footings had been dug in total, within an area measuring approximately 15.0m by 8.5m. All of the trenches were recently dug and it was possible to closely examine all of the exposed faces and base deposits. Several mounds of upcast soil were also searched for any possible dating evidence in the form of finds. The only feature which could be seen within the trenches was a modern soakaway seen running east to west in part of the garage footings. All of the ceramic wares and building material observed were nineteenth century in date or later. [Au(adp)]

LAUREL HOUSE, 14 THE STREET, BAWDSEY

Monitoring Report - Laurel House, 14 The Street, Bawdsey

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was required as part of a planning application. The development proposal consisted of an additional small extension south of the existing dwelling and a cart-lodge. A single visit was made to the site. Ground disturbance consisted of digging footing trenches within an area, which measured around thirty square metres, while the total length of the footing trenches was around 20m. The trench width averaged 0.65m, with variable depths between 1.0-1.20m. A much shallower trench, of around 0.50m in depth was located to the rear of the house. A substantial quantity of the upcast soil was available for inspection, but no datable finds were found which could potentially have originated before the nineteenth century. The footing trenches also failed to reveal any archaeological features, other than some ground disturbance associated with a post-medieval well located to the south-west of the existing house. Observation Record - Field adjacent to St. Peter's Church, Blaxhall

Carr, B Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

Fieldwalking of a field north of the church for which a planning application had been made for change of use from agricultural land to a burial ground was carried out. Finds included three struck flints with no significant dating characteristics, potentially of late prehistoric date. There was no building debris, no ceramic material and no notable colour changes in the soil. Previous metal-detected medieval finds within this area had no association with settlement or other occupation evidence. [Au(adp)]

Archaeological Monitoring Report - EDF Cable Trenches, Blythburgh Marshes, Blythburgh

Good, C Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

The re-location of power cables from overland to trenches underground adjacent to the A12, the A1095 and the A145 near Blythburgh, required a programme of archaeological monitoring to be undertaken. A series of trenches were excavated to an average depth of 0.8m in order for the cables to be relocated. Scattered archaeological finds and features dating from prehistory to the present were recorded on the county Sites and Monuments Record (SMR) near to the trenches, in particular Blythburgh village which was medieval in origin. Despite this, no archaeological finds or features were revealed during the monitoring. [Au(adp)]

Monitoring Report

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out at the site as a condition of planning application. The proposal consists of a small extension to the rear of the property, which entails digging around 3.30metres of strip foundation trenches. The site fell within an area of archaeological importance in relation to the medieval town as defined by the County Sites and Monuments Record. No archaeological features were observed within the trench. Considering how close the extension footings were to the present house, it seems most likely that the trenched area had already been heavily disturbed during the original building works. [Au(adp)]

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out as a condition of planning application at the site. The proposed development consisted of a small extension to the rear of the property including the demolition and rebuilding of two existing single storey structures. The area of ground disturbance

measured approximately 21m.x 12m. Within this area, a series of strip foundations were dug, along with more general ground lowering. [Au(abr)]

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out at 2 Manor Close, Walberswick as a condition of planning application, where a small extension to the rear of the existing dwelling was to be constructed. This entails digging around 14.30 linear metres of building footings along with slight ground levelling. A single visit was made to the site, it was possible to examine all of the open trenches, and some additional disturbed ground. A thorough examination of all the deposits was made under the full cooperation of the landowners and contractors. The monitoring produced only very limited evidence of archaeological features and no finds. [Au(abr)]

Good, C Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 2pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

The construction of a new industrial unit to the rear of Roland Plastics in High Street, Wickham Market, required a programme of archaeological monitoring to be undertaken. The site was adjacent to the findspot of Roman and medieval pottery and metalwork found in 2000. The industrial unit required footings that were inspected after excavation. No archaeological finds or features were revealed during the monitoring. [Au]

Work undertaken by: Suffolk County Council Archaeological Service

Archaeological monitoring was carried out as a condition of planning application W/17464/1 at the above address. Funding for the monitoring was to be provided by Mr. A.J. Oakley. The proposal consisted of a small extension to the east end of the present house. This entailed the excavation of around fourteen metres of footing trenches. A single visit was made to the site on 3rd May 2006 when it was possible to examine all of the recently dug, open trenches and also a quantity of the upcast soil. The site lay within an area that had previously produced evidence of Roman occupation, unfortunately, no further archaeological evidence was obtained as a result of this monitoring. [Au(abr)]
