**CITY WALK, MANSFIELD ROAD*****Report on an Archaeological Watching Brief: City Walk, Mansfield Road, Derby***

John Samuels Archaeological Consultants Newark : John Samuels Archaeological Consultants, 2006, 14pp, colour pls, figs, refs

*Work undertaken by:* John Samuels Archaeological Consultants

An archaeological watching brief was carried out during groundwork for the development of 37 apartments. The only archaeological feature to be seen in the course of the watching brief comprised a short section of sandstone wall, believed to date to some time in the first half of the 19th century. The wall was seen during excavations for decontamination works and was preserved *in situ* beneath an area of hardstanding. The monitoring of the works had shown that almost the entire site had been subject to very heavy disturbance effectively removing any archaeological deposits or burying them at a greater depth than the impact of the development. An archaeological watching brief was carried out during the excavation of geotechnical trial trenches. The trial trenches were required to provide information on the ground conditions in advance of the proposed redevelopment of part of the site. The watching brief involved the observation of ground works in order that any exposed archaeological remains were recorded. During the course of monitoring the ground works evidence was discovered for deposits relating to the silting up of the millponds that were marked on 19th century maps and plans of the site. Evidence for a roughly built sandstone bank and wall were also uncovered, which were thought to mark the boundaries of the millponds. [Au(adp)]

Lewis, B Nottingham : Trent & Peak Archaeological Unit, 2006, 9pp, colour pls

*Work undertaken by:* Trent & Peak Archaeological Unit

An archaeological watching brief was undertaken on the excavation of three test pits. These showed that the survival of the original road surface was at best variable and dependant upon the level of truncation due to services and 20th century road resurfacing. The best survival, due in part to the lower level of the road was on the north side of North Street. Twentieth century adaptation and re-use of the *in situ* kerbing on this side of the road to provide a sub-surface storm drain may also have accounted for the survival of some of the original pavement surface of limestone pitchings. However, the fourth test pit indicated that this survival was likely to have been patchy. [Au(abr)]

**ALL SAINTS CHURCH, ASHOVER***Archaeological Watching Brief at All Saints Church, Ashover, Derbyshire*

Baker, K Sheffield : ARCUS, 2006, 7pp, colour pls, figs, refs

*Work undertaken by:* ARCUS

An archaeological watching brief was carried out during the reordering of the west end of All Saints Church, Ashover. The works included the removal of historic fabric from the church to make a new door opening to the tower spiral stairs into the ringing floor and excavation of a service trench to accommodate the drainage from the new facilities to connect with existing mains sewers. The watching brief involved the observation of all intrusive groundwork in order that any exposed archaeological remains were recorded and to minimise the disturbance of any *in situ* human remains. During the course of the monitoring the door opening, no evidence was observed for any unusual structural remains or for any interesting features on newly exposed surfaces. During the monitoring of the intrusive groundwork, structural remains relating to the church foundations were uncovered and two human skeletons were disturbed during the excavation of a deep manhole. Baker, S and Jackson, R Sheffield : ARCUS, 2006, 11pp, colour pls, figs, refs

*Work undertaken by:* ARCUS

An archaeological watching brief was conducted during groundwork in preparation for the construction of two new bungalows. A feature previously interpreted as a possible medieval moat was encountered, and sections through the fills of the feature were recorded during excavation of foundation trenches. The surviving fills proved to be entirely modern in date, probably representing dumping during the 20th century. No medieval deposits or artefacts were present. The "moat" feature may therefore simply have represented an 18th or 19th century pond or lake within the landscaped gardens, or at least the complete refurbishment of part of an earlier feature. [Au(adp)]

Hurford, M      Leicester : University of Leicester Archaeological Services, 2006, 18pp, colour pls, figs, tabs, refs

*Work undertaken by:* University of Leicester Archaeological Services

Excavation of the site revealed evidence of a small-scale settlement, perhaps an isolated farmstead, in the vicinity of the medieval village of Humberstone, originally discovered in a 2003 evaluation. The features were badly truncated and lay beneath ridge and furrow remains. Ceramic evidence suggested a 12th or 13th century date for the settlement. To the west a single pit was found containing Iron Age pottery that could have been associated with the occupation at Elms Farm to the north-east. [Au(adp)]

**FOXTON INCLINED PLANE**

*An Archaeological Watching Brief During the Restoration of the Stop Lock and Upper Arm at Foxton Inclined Plane, Leicestershire*

Richards, G & Beamish, M Leicester : University of Leicester Archaeological Services, 2007, 19pp, colour pls, figs, tabs, refs

*Work undertaken by:* University of Leicester Archaeological Services

A watching brief was carried out during restoration of the stop-lock and re-watering of the upper arm at Foxton Inclined Plane, features constructed at the turn of the 20th century in order to bypass the congested Foxton Locks. The structure was abandoned in 1928 and fell into disrepair, however the archaeological monitoring showed that the limited temporal use of the site had left it in a good state of repair. There was evidence that tight budgetary constraints had influenced the materials used during construction. [Au(adp)]

*Work undertaken by:* John Samuels Archaeological Consultants

A desk-based assessment was carried out within the Great Bowden Conservation Area. Listed buildings were located within the vicinity of the site. It was considered that the site had a low to medium archaeological potential. The surviving stables and the riding house, although remodelled and repaired following bomb damage, were of local historical interest due to their connection with JH Stokes. [Au(adp)]

*Work undertaken by:* Northamptonshire Archaeology

A watching brief was carried out during the excavation of trenches for electric cabling on land along Main Street and Washdyke Road, Owston. Trench 1 extended 150m east along Washdyke Road cutting across Main Street and continued south along the grass verge and carriageway of Main Street to the electricity junction box immediately south of Palmer Cottages. Trench 2 extended 35m along the footpath to the west of Manor Farm cutting across Main Street to terminate on the grass verge at the junction with Cox's Lane. Further trenches for service cables were cut across Main Street from Hill Close Farm and across the vehicle access to the east of Main Street at the Old Byre. Other domestic services were connected via sub-surface bored cables. Evidence of an earlier cobblestone road surface in Main Street was exposed in the trenches. No other archaeological remains were present. [Au]

**ST THOMAS DRIVE, BOSTON*****Archaeological Excavation at St. Thomas Drive, Boston, Lincolnshire***

Peachey, M Sleaford : Archaeological Project Services, 2006, 39pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Project Services

The excavation recorded evidence for 2nd/3rd century AD occupation of the area. The lack of Romano-British features found in the remainder of the development area on the evaluation suggested that the site was on the western edge of a small Roman farmstead. A large ditch in the southwest corner of the excavated area was probably the outer boundary of the farmstead. The excavation recovered evidence indicating spelt processing. Romano-British pottery included sherds of dales ware suggesting coastal training. Sheep/goat were the most abundant animal bones while possible loom weight, daub and some briquetage were also found. Hall, N Lincoln : Pre-Construct Archaeology (Lincoln), 2006, 12pp, colour pls, figs, refs

*Work undertaken by:* Pre-Construct Archaeology (Lincoln)

No significant archaeological features were exposed during the watching brief. The remains of three foundations, one of roughly faced limestone fragments and two of brick were recorded. These probably represented the remnants of ancillary buildings associated with the windmill complex. A subsoil deposit was also observed, which contained limestone fragments and brick rubble and probably post-dated the construction of the windmill in 1798. A further ash deposit recorded adjacent to the base of the windmill was probably associated with the fire that occurred at the site in the mid 20th century. [Au(abr)]

**ST MARY'S CHURCH, WHAPLODE***Archaeological Watching Brief at St. Mary's Church, Whaplode, Lincolnshire*

Hall, N Sleaford : Archaeological Project Services, 2006, 30pp, colour pls, figs, refs

*Work undertaken by:* Archaeological Project Services

The watching brief revealed an extensive make up deposit within the north-western corner of the nave, which was associated with a late 17th century restoration of the church. Disturbance of earlier deposits during this restoration was evidenced by the presence of upturned stone coffin lids and residual finds of medieval pottery and glazed floor tiles. The external monitoring located a similarly disturbed post-medieval graveyard soil that contained occasional fragments of disarticulated human bone, while the lower levels of the 14th century walls of the South Porch were also exposed by the groundwork. Finds retrieved during the internal investigations included 17th century pottery, clay pipe stems and window glazing lead as well as residual medieval pottery and glazed floor tiles. The external monitoring yielded a very mixed assemblage that included post-medieval pottery and window glass and medieval glazed floor tiles. [Au(abr)]

Mason, P Northampton : Northamptonshire County Council, 2006, 21pp, colour pls, figs, tabs, refs, CD

*Work undertaken by:* Northamptonshire Archaeology

A watching brief on land adjacent to 5 Paddock Close, Ancaster was carried out while ground works for the construction of a new doctor's surgery were undertaken. The presence of a substantial Roman building, partially located by trial trench evaluation in 2004, was confirmed and its plan expanded upon. To the west, a service trench cut through the existing surgery's access road disturbed two ditches of probable Roman date. A small number of post-medieval walls were also recorded. [Au]

Hall, N Sleaford : Archaeological Project Services, 2006, 23pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Project Services

The excavation relocated and re-recorded in greater detail the Romano-British ditch identified by the initial evaluation. Further pottery was recovered from this feature, which dated to the 2nd to 4th centuries AD. A significant find of a patera handle fragment or a ritual vessel was also recovered from the upper fill of this ditch although this was residual. In addition, possible demolition material was located in the upper fill of this ditch. Three undated linear gullies found at the same depths may have been associated with this phase of activity. The site was also found to contain a series of undated and thin spreads of make-up material overlying the natural underlying sands. A series of sixteen load bearing brick pillars that formerly supported the cellar floor of the former malthouse were also identified along with a large and probably associated feature that was found at the southern end of the site. The accompanying watching brief did not identify any further archaeological features and/or

deposits following the monitored removal of the reinforced concrete base of the former grain silos at the rear of Baird's Mill. [Au(abr)]

**MANOR FARM, SUDBROOK**

*Residential Development at Manor Farm, Manor Farm, Sudbrook, Lincolnshire*

Trimble, R Sleaford : Witham Archaeology, 2007, 14pp, colour pls, figs, refs

*Work undertaken by:* Witham Archaeology

In general, the groundwork observed during the watching brief mostly contained recent deposits. However, the discovery of two undated ditches in the western part of the development and possible ditches at the eastern end of the site, in close proximity to Main Street, were also of potential significance. Masonry found suggested that a stone wall formerly defined the boundary. Finds of Roman tile and a sherd of 11th or 12th century pottery provided the only conclusive evidence of early activity in the area of the site. [Au(abr)]

Tann, G &amp; Pullen, R Lincoln : Lindsey Archaeological Services, 2006, 32pp, colour pls, figs, tabs, refs

*Work undertaken by:* Lindsey Archaeological Services

An archaeological watching brief identified small parts of building foundations, brick culverts and pipe ducts. Waste sand from the foundries had been disposed of in small pits across the site. Three fragments of medieval pottery were recovered, all from within 20th century material and were redeposit. During the redevelopment, contractors discovered human remains beneath the floor of the northern end of Block 8. The remains consisted of long bones, ribs and skull fragments from several individuals ranging in age from 2 to 35 years old. None of the bones were complete and none showed any obvious sign of breakages or disease. A fragment of frontal bone from a juvenile skull amongst the bones has had the upper cranial vault removed post-mortem in order to remove the brain. All were thought to predate the construction of Marshalls offices in 1882 and probably originated from the burial ground of a church that used to stand directly opposite the site. [Au(abr)]

*Work undertaken by:* Northamptonshire Archaeology

An archaeological investigation an area of approximately 1.2 hectares was made as the area was stripped. Radiocarbon dating indicated that residual charcoal of early Bronze Age date had been deposited in a pit of a later pit alignment. A single isolated small pit containing burnt debris has also

been radiocarbon dated to the early Bronze Age. A late Bronze Age/early Iron Age date would be expected for the pit alignment, but no dating evidence was recovered. The alignment appeared to comprise regular rectangular pits cut into both ironstone and clay, but the pits cut into the clay had eroded to sub-circular surface plans. A linear boundary ditch was also undated, but may have been related to an area of open settlement that comprised a scatter of small pits and post holes, including remnants of possible roundhouses and four-post structures. The small pottery assemblage contained little diagnostic material, but an early-middle Iron Age date was likely, perhaps the 5th-4th centuries BC. Furrows from a medieval ridge and furrow field system were also recorded. [Au(adp)]

An archaeological watching brief was carried out during the digging of a hole for a septic tank. A series of infilling layers were observed in the pit which, together with the position of the pit close to the moat, suggested that these represented the silting up and infilling of part of that feature. Artefacts from the layers included a sherd of medieval pottery, a glazed medieval roof tile and floor tile and a fragment of worked stone. Post-medieval window glass and stone roof tiles were recovered. A 16th century copper alloy jetton came from the topsoil. [Au(adp)]

**CENTRE FOR CONTEMPORARY ARTS, GARNERS HILL, NOTTINGHAM***Centre For Contemporary Arts, Garners Hill, Nottingham. Interim Report on Pre-Construction Excavation*

Kinsley, G Nottingham : Trent and Peak Archaeological Unit, 2006, 5pp, figs, tabs

*Work undertaken by:* NUCL

Previous documentary work at the site showed that it had contained the medieval Town Hall and other buildings. The earliest phase located probably belonged to the early post-Conquest period, with open drains, rock-cut pits and possible timber structures recorded. The Garners Hill footway was consolidated by the deliberate dumping of deposits. The second phase involved widespread dumping and the construction of stone walled buildings in the southern end of the area. The third phase involved the construction of a large mortared stone wall corresponding with the boundary of the Town Hall. Other 18th and 19th century brick walls were encountered across the site. Two caves and a possible third truncated cave were found at the frontage and a passage to the south end of the site. There were grounds to suspect that the cave may have dated to the pre-18th century, although the infilling was probably 18th-19th century. [Au(adp)]

Walker, D Nottingham : Trent &amp; Peak Archaeological Unit, 2006, 17pp, colour pls, figs, refs

*Work undertaken by:* Trent & Peak Archaeological Unit

The site lay to the south of the theoretical line of the medieval town defences. Three large medieval pits were observed, containing large numbers of Nottingham light-bodied green-glazed vessels, and coarse orange sandy ware cooking pots. A possible ash pit and kiln were also located, with an abundance of pottery and kiln furniture. The overall date range for the site was thought to be from 1200 to around 1325 AD. The quality and quantity of material found at Western Street marked it out as a valuable site for the understanding of medieval pottery production in Nottingham. [Au(abr)]

**ST KATHERINE'S CHURCH, TEVERSAL***St Katherine's Church, Teversal, Nottinghamshire. Archaeological Watching Brief*

Sumpter, T Retford : Tony Sumpter Archaeological Consultancy, 2007, 9pp, figs, refs

*Work undertaken by:* Tony Sumpter Archaeological Consultancy

A watching brief undertaken during the installation of a tea-point and toilet in the west end of the church demonstrated the movement of the Norman doorway in the 15th century, as well as the discovery of four inhumations probably of the 1830s. It was concluded that the footpath was relocated to its modern position after 1840. [Au(adp)]

Brudenell, M Cambridge : Cambridge Archaeological Unit, 2006, 82pp, colour pls, figs, tabs, refs

*Work undertaken by:* Cambridge Archaeological Unit

The excavation revealed a narrow swathe of Iron Age occupation encompassing both open and partially enclosed settlement components. Although a Neolithic and Bronze Age presence was indicated by residual flint work. During the Iron Age a small settlement comprising two single-phase roundhouses were framed by a loosely bounded enclosure to the west and a long segmented boundary ditch to the east. Together these ditches bisected the development area, creating a narrow corridor of settlement features. A small group of early Iron Age pottery, a rubbing stone and a burnt bone comb were recovered. During the middle Iron Age, settlement developed along the foot-print of the earlier boundaries. The western enclosure was re-cut and periodically re-worked, whilst a small new trapezoidal enclosure was constructed on the western end of the former segmented ditch line. This enclosure was re-worked on at least one occasion. The area around produced pits yielding a variety of objects including dumps of Scored Second ware pottery, a complete rotary quern, a minimum of 11 triangular loom weights, and several complete iron objects. *Archaeological Watching Brief on Land Adjacent to 10 Bull Lane, Ketton, Rutland*

Bradley-Lovekin, T      Sleford : Archaeological Project Services, 2006, 14pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Project Services

An archaeological watching brief was carried out within an area of archaeological potential. The brief revealed three phases of deposition; natural clay and silts sealed by undated deposits, one of which was possibly recent in origin, overlain by recent topsoil. No archaeological finds were recovered during the watching brief. [Au(adp)]

Cope-Faulkner, PSleaford : Archaeological Project Services, 2006, 20pp, colour pls, figs, tabs, refs

*Work undertaken by:* Archaeological Project Services

An archaeological watching brief was carried out at the rear of 40 Main Street, Market Overton, Rutland, monitoring the foundation trenches for a new detached house and garage. The site lies close to known archaeology of Romano-British date as well as Saxon. It revealed a sequence of natural and topsoil deposits along with a recent dumped deposit. No archaeological features were present and no finds retrieved. [Au(adp)]
