Dunstable Downs Multi-user Route. Impact Assessment for Archaeology and Cultural Heritage
 Keir, W Bedford : Albion Archaeology, 2006, 57pp, colour pls, figs, tabs, refs
Work undertaken by: Albion Archaeology
 Apart from the two segments of route that were surfaced, the remaining existing routes all caused some degree of erosion and truncation to the ground surface. Continued use of these routes would have an

increasingly detrimental effect on the preservation of any affected earthworks as well as the preservation of potential sub-surface archaeology. The worst affected areas of earthworks were in segments E15, which was also damaging Five Knolls SAM and routes E8 and E9 which were damaging earthworks B and C. Continued use of these routes and resulting scarring may also have detracted from the setting of any earthworks in the vicinity of the routes. [Au(abr)]

Work undertaken by: TNEI Services Limited

An environmental report was undertaken to accompany the planning application for the proposed repowering of the Great Eppleton Wind Farm. The wind farm had been operating since 1997 and comprised four 750 kilowatts and two bladed Windmaster 750 turbines. The total generating capacity was 3 megawatts. Repowering involved the replacement of the existing ageing turbines with modern more efficient turbines. There did not appear to be any archaeological remains/features on site which were not previously identified, however, field boundaries on the site could have potentially been included under the hedgerow regulations, as they may have dated to before 1850 and matched those on the tithe map of 1838 and subsequent OS maps.  Wind Prospect Developments Ltd London : Wind Prospect Developments Ltd, 2006, 29pp, pls, figs, tabs
Work undertaken by: Wind Prospect Developments Ltd
 There would be no impact on the character or appearance of any Conservation Area arising from the proposed wind farm. No Listed buildings or registered parks and gardens of historic interest were located within the site. All the Scheduled Ancient Monuments were in excess of 5km from the nearest wind turbine. No significant remains were recorded within the site of the proposed development. The construction of the proposed turbines and associated access tracks would only impact minimally upon the archaeological remains. The potential for previously unrecorded remains was very low.  White Young Green Birmingham : White Young Green, 2006, 15pp, figs, tabs, refs
 Work undertaken by: White Young Green

The archaeological assessment undertaken as part of the ES indicated that the area under the multi storey car park and police station was likely to have no surviving archaeology due to the depth of disturbance from its foundations. The areas of the site that showed the highest potential for archaeological remains were that of the bus station and two smaller areas of the police stations car park. The garage facing St. John's Street was likely to have insubstantial foundations that had a limited impact on potential archaeological remains. The surrounding open areas may have had a high archaeological potential, as they fronted onto the important medieval route of St. John's Street near to the entrance of the city. The report concluded that approximately 75% of the site had a moderate potential for archaeological preservation. [Au]
