Pre-Construct Archaeology Ltd. Durham : Pre-Construct Archaeology Ltd, 2006, 80pp, colour pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

The earliest features recorded on site were two east-west aligned Roman boundary ditches. Adjacent to this was a quarry pit of Roman date. A substantial refuse pit of late 3rd century date was also recorded. Archaeological remains of post-Roman date recorded at the site were of far lesser significant., A series of north-south aligned plough furrows produced ceramic material suggested that the site was ploughed from at least the 17th century. PARK VIEW COMMUNITY SCHOOL, CHESTER-LE-STREET*An Archaeological Excavation at Park View Community School, Chester-Le-Street, County Durham*

Pre-Construct Archaeology Ltd. Durham : Pre-Construct Archaeology Ltd, 2006, 72pp, colour pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

Archaeological remains of Roman and medieval date were recorded at the site. The earliest features recorded included part of a large sub-rectangular pit in the north-eastern part of the site. This yielded Roman pottery from the second half of the 2nd century AD. Although the precise function of the pit was uncertain, the presence of a clay-lining suggested that it was designed to hold water. Another feature, possibly a pit, was partially exposed in the south-eastern corner of the excavation. A metallated surface overlay the small of the two pits and continued beyond the limit of the excavation to the south and east. A substantial ditch was recorded in the western half of the exaction area. Four shallow pits recorded in the central part of the site yielded goat and cattle horn cores, suggesting that they related to horn working. A stone-lined well truncated the Roman ditch. The site also produced seven pottery sherds from a 13th/14th century vessel with a strap handle. [Au(abr)]

DURHAM INDOOR MARKET/TOWN HALL, MARKET PLACE, DURHAM

An Archaeological Excavation at Durham Indoor Market/Town Hall, Market Place, Durham, County Durham

Pre-Construct Archaeology Ltd. Durham : Pre-Construct Archaeology Ltd, 2006, 39pp, pls, figs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

During an excavation at the site of the Listed building, natural sand was encountered below the present floor of the storeroom. It was truncated by a substantial pit, only partially revealed within the limits of excavation, which produced late 11th-early 12th century pottery, a probably iron fitting and biological remains indicating that the pit was utilised primarily to dispose of food waste. The refuse pit had been cut through by a linear north-west to south-east aligned feature, probably a robbed out wall footing. Fragments of pottery recovered from this feature dated to the 13th century. The alignment of the wall perhaps suggested that buildings fronted onto the western side of the Market Place during the 13th century. [Au(abr)]

MASTER'S GARN, DURHAM CASTLE***Archaeological Monitoring in the Master's Garden, Durham Castle***

Annis, R Durham : University of Durham, Archaeological Services, 2006, 2pp, colour pls

Work undertaken by: University of Durham, Archaeological Services

In the course of the repair of a pipe, soil was cleared from below the PVC pipe to allow a clamp to be fitted over a split. This clearance revealed a large concrete pipe running north-south, parallel with the garden wall. It was believed that this was a duct carrying a steam pipe into the Castle from Hatfield College. The excavation for this large duct would have effectively destroyed any archaeological deposits that may have existed along the western edge of the garden. For this reason, no further archaeological work was recommended. [Au(adp)]

Platell, A Durham : University of Durham, Archaeological Services, 2006, 16pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

A desk-based assessment identified that a number of prehistoric finds had been made in the close vicinity of the development area. Archaeological monitoring showed that the street frontage had been levelled to the depth of natural geological deposits. This levelling was likely to have removed any medieval or post-medieval archaeological deposits from this area. Two gullies were cut into the natural geology. There were undated but filled with topsoil and therefore probably modern in origin. There contained some coal and iron slag fragments. No archaeological deposits were identified across the remainder of the site. [Au(abr)]

Archaeological Watching Brief at the Former Council Depot, Birch Road, Barnard Castle (Teesdale District), Co. Durham

Turnbull, P Barnard Castle : Brigantia Archaeological Practice, 2006, 20pp, figs

Work undertaken by: Brigantia Archaeological Practice

Tan pits survived up to the point of the boundary wall adjacent to the site. The tanks were fully lined and floored with timber. This proved, rather surprisingly, to be oak. The timbers were thick boards, 30cm broad and 3.4cm thick. Each corner of the pieces was covered by a triangular piece of timber. The pits were filled with large quantities of sodden, shredded oak bark with a small quantity of rubble and clay on top. A few pieces of hemp rope and a sack made of hemp or jute were also found. Work undertaken by: The Archaeological Practice Ltd.

Two trenches cut across the site revealed structural remains associated with medieval pottery. A shallow ditch and possible wall or remains of a surface were found. The southern trench contained the remains of a wall within a gulley and appeared to form a boundary feature. This was associated with medieval pottery and stone tools. In the northern gulley was a substantial, later post hole. South of the boundary was a possible hearth feature. The northern edge of the hearth had been disturbed by the later insertion of a deep cobble-filled pit, probably a soakaway. Between the boundary and hearth were a number of features, mostly shallow pits. [Au(adp)]

The survey and excavations demonstrated that there had been a settlement at the site since the medieval period. The site comprised two distinct areas of buildings, separated by a spread of earthworks. It was thought that the site was perhaps a larger settlement that had contracted into two separate entities. Artefacts at the site dated the occupation phases from the 12th/13th centuries and the 18th/19th centuries, with a hiatus in between. The site was in a good state of repair and had considerable future research potential. [Au(adp)]

LAND SOUTHEAST OF BAKER ROAD, CRAMLINGTON

Land Southeast of Baker Road, Cramlington, Northumberland - Archaeological Monitoring

Claydon, M Durham : University of Durham, Archaeological Services, 2006, 15pp, figs, tabs, CD
 Work undertaken by: University of Durham, Archaeological Services

Archaeological monitoring observed plough furrows of presumed medieval date across the site. A ditch and gully along the western side may have represented boundary features of a medieval or post-medieval date. 19th and 20th century disturbance comprising shallow coal and clay spreads and two gullies were evident in the southwest part of the site. These features may have related to modern levelling/drainage to the site. [Au(adp)]

PLESSEY ROAD, BLYTH

Plessey Road, Blyth, Northumberland - Scheme of Archaeological Works

Rae, A Durham : University of Durham, Archaeological Services, 2006, 21pp, figs, tabs, CD
 Work undertaken by: University of Durham, Archaeological Services

A total of 13 test pits were excavated along the route of the new water main in order to identify and locate existing services and to establish the nature and extent of any archaeological remains. Eleven test pits were excavated along Plessey Road and two on the grass verge to the south of the road at the west end. In the eleven pits a clay silt deposit with ash inclusions was identified up to 1m deep, this was the ballast material used to construct the Plessey Wagonway. No evidence of the track-bed was found. The material was truncated by modern services and overlain by levelling deposits for the road

and grass verge. In the two remaining pits natural clay subsoil was found immediately below the modern deposits. [Au(adp)]

BUILDINGS AT WEST THROPHILL FARM, THROPHILL, MORPETH

Buildings at West Throphill Farm, Throphill, Morpeth, Northumberland - Building Recording and Archaeological Monitoring

Annis, R. Durham : University of Durham, Archaeological Services, 2006, 23pp, colour pls, figs, CD

Work undertaken by: University of Durham, Archaeological Services

Archaeological recording and monitoring work was conducted in advance of a proposed development. Three buildings were recorded, a pair of stone store buildings, one with an attached horsegin, and a brick water tower. Both the stone sheds and the gin-house appeared on the first edition OS map of 1866, the water tower was of 20th century date. They were typical examples of 19th century farm buildings and there was no evidence that they incorporated or re-used any earlier masonry or structures. [Au(adp)]

HALTON EAST FARM*An Archaeological Watching Brief at Halton East Farm, Northumberland*

Railton, M Nenthead : North Pennines Archaeology Ltd, 2006, 23pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

The farm was located on the course of Hadrian's Wall, and much of the development fell within the boundary of the Scheduled Ancient Monument. Groundwork at the site revealed a number of features, including two possible sections of Hadrian's Wall located close to the ground surface. A number of post-medieval features were encountered, including a substantial yard surface and several boundary walls. The foundations of a demolished 20th century barn were also recorded. Given the archaeological importance of the site it was recommended that the wall remains were preserved in situ and any other work at the site was subjected to archaeological monitoring. [Au(adp)]

Alan Williams Archaeology Newcastle-upon-Tyne : Alan Williams Archaeology, 2006, 5pp, colour pls, figs

Work undertaken by: Alan Williams Archaeology

Archaeological monitoring was carried out prior to indented alterations of floor levels at the visitor centre and two test pits were excavated within the church. Test pit one was located towards the south-west of the foyer of the visitor centre and test pit two within an office centrally within the chancel. The present floor level in the nave was lower than that of the chancel, the test pits suggested that the earlier formation involved a shallow step up from the nave to the chancel (indicated in test pit one) and further east, a higher step up within the chancel (indicated in test pit two). FORMER GARAGES AND OUTBUILDINGS ADJACENT TO ROSE VILLA NURSERY, CHURCH LANE, WHICKHAM

Former Garages and Outbuildings Adjacent to Rose Villa Nursery, Church Lane, Whickham - Archaeological Watching Brief

Muncaster, W Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2006, 15pp, colour pls, figs, tabs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An archaeological watching brief was carried out at former garages and outbuildings adjacent to Rose Villa Nursery. The west facing elevation formed the exterior walls of several buildings fronting onto Rose Villa Lane. Cartographic evidence indicated that the phases of construction dated from the early 19th century. The western elevation was drawn during the building recording in order to facilitate the future reconstruction of the original exterior face of the wall, which was to be incorporated within the new development. There was no evidence for medieval activity and the function of the 19th century building could not be determined. Buried ploughsoil was encountered and suggested that there was potential for survival of archaeological features or deposits in the east of the site. [Au(adp)]

LAND AT LEAM LANE, GATESHEAD

Land at Leam Lane, Gateshead - Geotechnical Test Pits Observe and Record

Finch, NLeeds : Scott Wilson, 2006, 21pp, colour pls, figs, tabs, refs

Work undertaken by: Scott Wilson

An archaeological observe and record exercise was carried out and the excavation of several trial pits were monitored and recorded. Although trial pits were limited in their scope for archaeological interpretation, they revealed that substantial ground reduction had taken place across the site. All trial pits revealed tarmac and hardcore material directly above natural sands and gravels. [Au(adp)]

Alan Williams Archaeology Newcastle-upon-Tyne : Alan Williams Archaeology, 2006, 13pp, colour pls, figs

Work undertaken by: Alan Williams Archaeology

An archaeological watching brief was carried out. The site lay within an area of archaeological sensitivity, including the Pons Aelius Roman Fort, an Anglo-Saxon cemetery, the medieval remains of the keep and bailey wall and possible post-medieval remains. No archaeological deposits were seen during the majority of the watching brief as the duct trench remained within the existing water trench. Outside the water service trench there was a lot of disruption by other services, but to the south-east there were remains of a post-medieval foundation, possibly a wall. [Au(adp)]

Randerson, M. Durham : University of Durham, Archaeological Services, 2006, 6pp, figs, CD

Work undertaken by: University of Durham, Archaeological Services

The site was located along the course of the Hadrian's Wall corridor, in the area of the Scheduled Ancient Monument of the Wall. Archaeological monitoring was conducted for an installation of an automatic number plate recognition camera on the Roman way, West Denton, Newcastle-upon-Tyne. The works included the excavation of a footing for the camera upright, and a duct trench to accommodate the power supply. The excavation of the plinth base revealed no archaeological features. The duct trench encountered a buried manhole cover at the eastern end of the trench of modern origin, however, no archaeological material was observed. [Au(adp)]

TIME CENTRAL DEVELOPMENT SITE, GALLOWGATE***Time Central Development Site, Gallowgate, Newcastle-upon-Tyne - Watching Brief***

The Archaeological Practice Ltd. Newcastle-upon-Tyne : The Archaeological Practice Ltd, 2006, 18pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

An archaeological watching brief was carried out and monitored groundwork at a development site encompassing 30-34 Gallowgate and the south part of the car park east of Strawberry Lane. Previously a desk-based assessment and building survey was carried out on the site. At first during the watching brief, no archaeological observations were made, but then brick and concrete structures and one underlying stone wall were recorded along the south and west edges of the site, possibly brick walls and cellar vaults of the Corporation baths and wash houses which were known to have occupied the site. The underlying stone wall may have belonged to an earlier post-medieval building. [Au(adp)]

WESTGATE ROAD, NEWCASTLE-UPON-TYNE***Westgate Road, Newcastle-upon-Tyne - Archaeological Watching Brief***

Telford, A Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2006, 17pp, colour pls, figs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An archaeological watching brief was carried out and three trenches and two junction boxes were excavated. In the north-eastern corner of the box excavated at the junction of trenches one and two, a shallow feature cut into the natural clay. It was suggested that the feature represented a cut for the placement of entanglements or obstacles on the berm north of Hadrian's Wall. This kind of feature had been recorded to the north of the wall, previously at Buddle Street, Wallsend, Shields Road, Byker and Hexham Road, Throckley. If this interpretation was applied, the depth of the feature would indicate that considerable horizontal truncation of deposits in the area had occurred. If this was the case, it would also account for the fact that the feature was recorded in isolation, where a series of pits on the alignment of the wall would normally be expected on the berm. A feature was also recorded in trench one from which a number of fragments of human bone were recovered. These were possibly associated with the burial ground of the hospital of St. Mary in Westgate, which had a 12th century foundation. These might have been redeposited as the area was investigated in 1890 when a medieval cross slab grave cover was recorded to the east of the service trench. [Au(adp)]

CHURCH ROAD, SOUTH GOSFORTH, NEWCASTLE-UPON-TYNE

Report on an Archaeological Watching Brief at Church Road, South Gosforth, Newcastle-upon-Tyne

Johnstone, M Nenthead : North Pennines Archaeology Ltd, 2006, 20pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological watching brief was carried out. Trench one revealed a cobbled/rubble surface faced by larger sandstone kerbstones. The precise alignment of this masonry could be further projected when landscaping between trenches one and five exposed a layer of burnt red shale, which lay just above the masonry and was associated with the surface. This masonry had been interpreted as representing a post-medieval street surface. Trenches five, six, seven, eight and ten contained a culvert from which no dating evidence was recovered. Trench seven contained a cluster of sandstone blocks suspected to be a demolished wall. Later excavations of trench eleven revealed better preserved stonework of the same wall. [Au(adp)]

TANNERS BANK, NORTH SHIELDS***Tanners Bank, North Shields, Tyne and Wear: Post-excavation Assessment Report***

Carne, P Durham : University of Durham, Archaeological Services, 2006, 57pp, figs,
Work undertaken by: University of Durham, Archaeological Services

The works comprised two evaluation trenches, two episodes of archaeological monitoring, an area of excavation, and a photographic survey of architectural features on the site. In area A, thirteen or possibly fourteen wood-lined tanning pits were defined by a stone wall; a cobbled surface had been built against this. The tanning pits had been backfilled with waste material from local industries; this material was also dumped across the site to level up the area. The southern half of the site had a surface of broken pantile, and a shallow pantile-filled pit. A square brick structure was also recorded. A well was identified c.25m to the west of the main area of excavation. In area B 18th century landscaping, an early 19th century forge, and two later 19th century industrial structures were identified. A brick-built sewer of the late 19th or early 20th century was also recorded. In Area C established the presence of a horn-core filled gully associated with 7 tanning pits was identified. A stone well of unknown date was also present. To the north-east of these was a 6.5m long stretch of mid-19th century stone culvert. Around 15m to the west of this was a 20th century brick circular chimney. [Au(abr)]
