Work undertaken by: Gifford & Partners

With the reduction of the ground surface, three possible rubbish pits were exposed cut into the natural bedrock. A pit located in the south-western corner of the site was filled with a very dark grey brown sandy loam and contained vast quantities of glass, animal bone and the base of a sandstone pillar or column. The finds were dated to the late 18th-19th century. A culvert, drain, vault and wall footings were also observed. [Au(adp)]

LEIGHTON HALL FARM, PARKGATE

Leighton Hall Farm, Parkgate, Cheshire. Report on an Archaeological Watching Brief

Crowe, C Macclesfield : AAA Archaeological Advisors, 2006, 16pp, figs, refs

Work undertaken by: AAA Archaeological Advisors

Observations of extensive excavations of services and drainage trenches over the entire development site turned up pottery sherds from a period 1870-1930. The archaeologist concluded that the site was developed c.1870 as a model farm, and that yard area, largely cobbled, was kept clear of domestic refuse. The 17th century Listed barn building, appeared not to have been inhabited on a regular basis. [Au(adp)]

GAWSWORTH NEW HALL, REPAIRS TO POOL WALL

Gawsworth New Hall, Repairs to Pool Wall. Report of an Archaeological Watching Brief

Crowe, C Macclesfield : AAA Archaeological Advisors, 2006, 12pp, colour pls, figs, refs

Work undertaken by: AAA Archaeological Advisors

The site was part of the Scheduled Ancient Monument, Gawsworth Hall, and its Registered Garden. It was established during the watching brief that the wall was built in the latter years of the 20th century and that the wall was the first version on the site. At some time previously the pool was bounded by a wooden revetment on the north side, which the wall has replaced. A tunnel was known for many years to run from Gawsworth New Hall down to the pool, This was a brick vaulted construction and this excavation revealed that it had been closed off at the pool edge by a square brick sump during the 19th or early 20th century. The purpose of the tunnel remained a mystery. [Au(abr)]

CARLISLE CITY CENTRE

Carlisle City Centre, Cumbria - Archaeological Watching Brief

Tonks, D Lancaster : Oxford Archaeology North, 2006, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

An archaeological watching brief was carried out. Despite a number of trenches being opened and backfilled in the absence of an archaeologist, the excavation of 307 trenches was undertaken in the presence of an archaeologist. For 303 trenches, the excavation was contained within the modern backfill of the pre-existing water pipe trenches. Only the excavation of four trenches revealed natural geological deposits sealed by modern material. Finds were recovered from fourteen of the trenches, including degraded human bone and a copper alloy sewing needle, both retrieved from Paternoster Row. All were from unstratified deposits and no archaeologically significant inferences could be drawn from their presence. [Au(adp)]

MANDERLEY CHURCH BROUGH***Manderley Church Brough, Cumbria - Archaeological Desk Based Assessment and Watching Brief***

Clark, S Lancaster : Oxford Archaeology North, 2006, 36pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

An archaeological desk-based assessment and watching brief was carried out and located 25 sites within the vicinity. The watching brief revealed a slope consisting of stone packing against the east wall with a bank of redeposited subsoil overlaid by topsoil. On the southern edge of the site, a cluster of medium to large subrounded and subangular limestone boulders was found. Removal of those stones revealed a complete four sided building of limestone and mortar construction. [Au(adp)]

LAND AT WARCOP TOWER, WARCOP

Archaeological Excavation on Land at Warcop Tower, Warcop, Appleby-In-Westmorland, Cumbria

Sowerby, M Nenthead : North Pennines Archaeology Ltd, 2006, 34pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological excavation was carried out on land at Warcop Tower. The archaeological evidence for the medieval period was characterised by a possible shallow ditch, which ran parallel to the large rectangular earthwork platform and which was thought to be of possible medieval origin. The ditch appeared to have been severely truncated by later post-medieval activities, namely the construction of a farm building directly onto the earthwork, which made it difficult to locate with absolute certainty. Medieval and later medieval pottery was found in the fills of the ditch and two pits also yielded pottery of medieval date. 18th to 20th century features in the form of the foundation of a large farm building, a stone lined field drain and a small pit were also recorded. Hill Top Farm, Pilsworth, Bury. An Archaeological Excavation

Gregory, A, Garratt, R & Nevell, MManchester : University of Manchester Archaeological Unit, 2006, 48pp, colour pls, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

The excavation revealed the remains of a probable 16th century stone building. Associated with it were a number of pits. In the early 18th century, it was replaced by a barn with stone footings and in the mid-late 18th century a brick built farmhouse had been constructed. A stone lined well and two linear pits of the same date were also found. By the late 19th century further out buildings to the farm were constructed. The pottery found indicated a domestic use for the structure. [Au(adp)]

HALTON CASTLE, RUNCORN

Halton Castle, Runcorn, Cheshire. A Programme of Archaeological Observation Carried out During the Installation of New Fencing at Halton Castle, Runcorn, Cheshire

Cheshire County Council & Norton Priory Museum Trust Chester : Cheshire County Council, 2006, 15pp, colour pls, figs, tabs, refs

Work undertaken by: Norton Priory Museum Trust, Cheshire County Council

Excavation of the post pits for the fence posts revealed that along most of its length, which followed the eastern circuit of the castle's curtain wall, the ground had been disturbed in the recent past. This disturbance appeared to be associated with a reconstruction of the curtain wall, which was carried out in 1995. Less disturbed deposits were seen only at the northern and southern end of the fence line, where original walling set directly on bedrock and the foundations of the early 19th century folly were revealed. Hameldon Hill Wind Cluster, New Barn Farm, Burnley, Lancashire. Archaeological Watching Brief

Lee, R Lancaster : Oxford Archaeology North, 2006, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

The archaeological watching brief revealed no evidence of discrete archaeological features or deposits in any of the proposed turbine locations or beneath the route of the access road. However, a number of earthworks, including banks, mounds and ridge and furrow were present within the field in which the turbines were constructed and, in several instances, were transected by the access road. In total, eleven features were identified, including four banks, two areas of ridge and furrow, a possible building platform, an enclosure, a mound and two embanked depressions. The function of the latter three features could not be identified on the basis of the current limited investigation, but was likely that the banks represented boundaries within a possibly medieval field system characterised by the ridge and furrow. ST GEORGE'S QUAY, LANCASTER***St George's Quay, Lancaster. Archaeological Watching Brief***

Tonks, D & Healey, C Lancaster : Oxford Archaeology North, 2006, 35pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

Archaeological observations suggested that elements of both the nineteenth and possibly the eighteenth century quayside partially survived beneath the modern landscaping. In addition, a sherd of Northern gritty ware pottery, dating from the twelfth to mid-thirteenth century, was recovered during Phase 1. This was highly significant, given the paucity of medieval pottery found anywhere within the city, and especially important considering that no medieval pottery had previously been recovered from the site of the quayside. During the Phase 2 works a large timber, sawn at the base and with clear tool-marks, was found in an upright position. The rather ambiguous radiocarbon date suggested a date from between the early eighteenth century and the twentieth century. [Au(abr)]

ST SAVIOUR'S CE CHURCH, STYDD

St Saviour's CE Church, Stydd, Lancashire. Archaeological Watching Brief

Tonks, D Lancaster : Oxford Archaeology North, 2006, 21pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

A watching brief was undertaken during the excavation of new and replacement land drains to the immediate exterior of the church. A single feature was observed in trench 4, which comprised an east/west aligned linear ditch that apparently underlay the structure of the church. Although there were no diagnostic finds within its fill, its position beneath the building dictated that it must have pre-dated the building of the present church, and was likely to be medieval in date or possibly even Roman. A fairly substantial assemblage of pottery was recovered from unstratified deposits in Trench 2. The dates ranged from Roman and late-medieval periods through to the nineteenth century. This span was not continuous but corroborated the known history of the site from the medieval period through to the nineteenth century, with the addition of evidence from the Roman period as well. [Au(abr)].

13 CHURCH STREET, RIBCHESTER

13 Church Street, Ribchester, Lancashire: Archaeological Watching Brief

Dawson, J Ulverston : Greenlane Archaeology, 2006, 30pp, colour pls, figs, refs

Work undertaken by: Greenlane Archaeology

The resultant ground disturbances revealed evidence for a cambered cobbled road of Roman date, which was preserved *in situ*. The post-excavation work revealed that the assemblage of Romano-British pottery could be dated to the late 1st /early 2nd to the mid 3rd-mid 4th century. Context 1002, which directly overlay the Roman road, also contained a short length of copper alloy chain and a green glass pin head, both of which were not closely dateable. This context was only partially sealed by a deposit of Romano-British date, and in most places lay directly beneath the topsoil. A single fragment of medieval pottery, dated to the late 12th to early 13th century, was recovered from the topsoil, together with larger quantities of post-medieval and Romano-British finds. The results of the watching brief were consistent with the location of the site relative to other known remains of Roman date within Ribchester, not least the fort. [Au(abr)]

BLACKING MILL, TRENCHERFIELD, POTTERY ROAD, WIGAN

Blacking Mill, Trencherfield, Pottery Road, Wigan, Greater Manchester

Ridings, C Lancaster : Oxford Archaeology North, 2006, 51pp, colour pls, figs, refs

Work undertaken by: Oxford Archaeology North

The archaeological investigation provided a valuable opportunity to investigate the physical remains of a blacking mill, the precise mechanism of which was poorly represented in the historical and archaeological record. In addition, two fragments of pottery that were recovered from the excavation testified to activity in the vicinity between 12th and 13th centuries, although it seemed unlikely that they represented the occupation of the actual study area during this period.
