Work undertaken by: Archaeology South-East

An archaeological watching brief was maintained between the 5th September and 8th December 2006. A 2.10m by 1.40m trench was excavated to locate the current drain and new drainage trenching to an approximate cumulative length of 39.00m. An associated soakaway measuring 2.10m by 1.40m was also monitored as were two large deep trenches excavated for gas storage tanks and their associated service runs. With the exception of the end of a brick-built outbuilding of probable late 18th to early 19th century date, little of archaeological significance was encountered. [Au(abr)]

THE CHATTRI, NEAR PATCHAM, BRIGHTON*The Chattri, Near Patcham, Brighton, East Sussex. Archaeological Watching Brief. Summary Report*

Barber, L Ditchling : Archaeology South-East, 2006, 7pp, figs, tabs, CD

Work undertaken by: Archaeology South-East

An archaeological watching brief was carried out commissioned by Brighton and Hove council during conservation and repair works at the Chattri, near Patcham. The Chattri, a small domed shaped monument on the Downs, was dedicated to the Indian soldiers who died during the Great War in the Brighton hospital and later cremated on the Downs. The entire area around the study site was an area of prehistoric activity. The site was a Listed building, however "like for like" repairs fell outside the scope of Listed building Consent. The groundwork associated with the refurbishment of the monument had

no adverse affect on the archaeological resources of the area. No archaeological deposits or features were disturbed by the shallow nature of the groundwork and therefore monitoring was terminated. [Au(adp)]

LAND AT 155-166 KINGS ROAD ARCHES, BRIGHTON***An Archaeological Watching Brief on Land at 155-166 Kings Road Arches, Brighton, East Sussex***

Thorne, A Ditchling : Archaeology South-East, 2006, 12pp, figs, CD

Work undertaken by: Archaeology South-East

An archaeological watching brief was carried out during groundwork relating to a flood alleviation scheme on the promenade at Brighton seafront between West Street and Middle Street. No archaeological finds or features were noted from the groundwork on the Brighton seafront promenade. Storm gravel beach deposits were encountered at a depth of 200mm below the modern ground surface. However, a structure possibly associated with the Victorian sewers (Context 1) was partially revealed during the excavation within 155 Kings Road Arches. The development site lay within the former lower medieval town of Brighton, which was an archaeologically sensitive area and designated as such. This former town had been totally lost to coastal erosion by the early 18th century. [Au(adp)]

Work undertaken by: Albion Archaeology
 An archaeological watching brief was carried out during groundwork associated with the creation of an all-weather playing surface. Groundwork revealed the remains of a series of bedding trenches (possibly of a type used in viticulture). These were of probable Roman date. Interestingly, evidence for an internal trackway was recorded within the series of bedding trenches. A large medieval ridge and furrow cultivation, and two post-medieval sunken featured buildings were also revealed. The medieval/post-medieval ditch was probably related to an enclosure to the south. The two sunken features building were unusual, being of a building type that was largely obsolete by the post-medieval period. Comparison with other known examples suggests they were probably used for a specific type of activity, such as weaving or cheese-making. [Au(abr)]

An Archaeological Watching Brief at Old Mill Cottage, Oldlands Hill, Fairwarp, East Sussex
 Greatorex, C East Sussex : C G Archaeology, 2006, 32pp, figs, tabs, refs, CD
 Work undertaken by: C.G. Archaeology

An archaeological watching brief was maintained on groundwork associated with the construction of a private manege to the west of Old Mill Cottage, Oldlands Hill, Fairwarp. Just one large, irregularly shaped feature of proposed natural origin was revealed during the project. This cut possessed a maximum recorded width of c.8.5m and a depth of at least 1.10m and may have represented an ancient watercourse. Twenty-seven sherds of pottery dating to the 1st-2nd century AD were gleaned from the fieldwork. However, the monitored groundwork failed to expose a single archaeological context associated categorically with a Romano-British iron smelting complex once located in the vicinity. This was perhaps less surprising if one considers that much of the latter site was "almost completely destroyed, early last century (the 19th century), when the vast slag heaps were used as a source of road making material" (Tebbutt and Tebbutt 1982, 12). Numerous iron slag nodules, a smaller number of burnt clay fragments and two sherds of post-medieval pottery were also documented. [Au]

'KNOWLANDS', ST. MARTINS LANE, LEWES***An Archaeological Watching Brief at 'Knowlands', St. Martins Lane, Lewes, East Sussex***

Riccoboni, P Ditchling : Archaeology South-East, 2007, 15pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological watching brief was conducted during groundwork associated with the construction of new extension (ref: LW/05/2260) at "Knowlands", St. Martins Lane, Lewes. Three separate site visits were made on 4th, 7th & 8th August 2006. Six archaeological features were recorded and excavated. In total 5 pits were encountered within the limits of the work. These features were then hand excavated to depths no greater than development formation level. Two medieval pits were identified (Cuts 11 & 14). These pits contained pottery dating between the 11th and 13th Centuries AD. One of these pits (Cut 11) was later re-used in the post-medieval period (Cut 1). Another post-medieval pit was seen cutting through two earlier pits (Cuts 8 & 14). This pit (Cut 6) contained a near complete early 17th century Flechen jug and a 16th century purse. In addition, one large brick built possible cess pit was recorded beneath a supporting wall of the existing house. A brick sample was taken from this structure and dated the feature between the 18th-19th centuries AD. [Au(abr)]

ST PANCRAS HOUSE, PRIORY STREET, LEWES***An Archaeological Watching Brief at St Pancras House, Priory Street, Lewes, East Sussex***

Meaton, C Ditchling : Archaeology South-East, 2006, 17pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

The proposed residential development at Priory Street was bounded to the east by Garden Street, to the south by Priory Street, and to the north and west by residential plots. An archaeological watching brief was carried out at the site in April 2006 during the excavation of strip footings, service trenches and associated ground reduction prior to the construction of 5 residential 3storey town houses. Up to 600mm of mixed overburden was identified, beneath which a number of stratigraphically sealed archaeological features and deposits were recorded. Most notable were three probable rubbish pits, containing what appeared to be domestic refuse, and securely dated to the 12th and 13th centuries. It was suggested that these features may have related, directly or indirectly, to the large Cluniac Priory founded and built in the second half of the 11th century, the ruins of which lay directly to the south. Some post-medieval features and structures were also recorded within the footprint of the recently demolished building. Furthermore, it seemed likely that a number of undated pits exposed in the narrow strip footings also had the potential to be of medieval origin. [Au]

THE DRIPPING PAN, LEWES FOOTBALL GROUND, LEWES

An Archaeological Watching Brief at the Dripping Pan, Lewes Football Ground, Lewes, East Sussex

Barber, L Ditchling : Archaeology South-East, 2006, 20pp, colour pls, figs, tabs, refs
Work undertaken by: Archaeology South-East

A watching brief was maintained during May/June and October/November 2006 during the groundwork associated with the construction a new seated and standing stand on the south side of the Dripping Pan, Lewes Football Ground. Although no archaeological features were visible within the exposed undisturbed surfaces of the underlying geology or trench sides during the course of the watching brief, finds recovered from the bank make-up layers of the Dripping Pan earthwork suggested it to have been constructed in the early post-medieval period (late 16th to early 18th century). An earlier wall, hidden behind the current eastern boundary wall, may have been the remains of the later medieval Priory precinct wall. These walls were breached by a c.12.7m wide new access point. LAND AT GREEN CLOSE, RINGMER

An Archaeological Watching Brief on Land at Green Close, Ringmer, Sussex

Whittaker, D Ditchling : Archaeology South-East, 2006, 14pp, figs, tabs, refs
Work undertaken by: Archaeology South-East

The watching brief was maintained during the excavation of two test pits, a service trench and an eight metre square by eleven metre deep pit for the site of a sewage tank. Limited post-medieval remains were found consisting of patches of debris and a north-south orientated curvilinear ditch/gully containing a post-medieval clay pipe stem. No sequential relationships were established although post-medieval dating evidence was acquired from across the site. The sole feature was a man-made drainage gully. [Au(abr)]

Smith, M Southampton : Southampton City Council Archaeology Unit, 2006, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

A watching brief was held on the erection of a new apartment block and to structural alterations to the standing building. Apart from one sherd of residual Roman pottery, the earliest evidence for human activity found on the site was late-medieval in date. The area of the new block was in the backyard area of the street frontage property. The features included a timber lined well and a timber-lined gully. The latter probably helped drain the site into a stream that was said to have existed to the south. A single wooden post was found. It may have been part of a structure, but no other posts were found in the watching brief. The ground level was built up by deliberate dumping of brick rubble. The timber framed building was found to date from the late-medieval period. [Au(abr)]

Cunliffe, B Oxford : Oxford University, 2006, 36pp, colour pls, figs, refs

Work undertaken by: Oxford University

The 2006 excavation season identified seven structural phases. North-south ditches underlay an east-west ditch, with later timber buildings and an early corn-drying oven over these remains. Later burying and demolition of the buildings and the levelling of a ditch perhaps related to an earlier aisled hall and a hexagonal building, with a later aisled hall encountered as well. Baths had been added to the aisled hall along with other additions and finally, evidence that the baths had been rebuilt was noted. [Au(adp)]

Capon, L Twickenham : AOC Archaeology Group, 2006, 36pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation and subsequent watching brief found that the earliest features on the site were medieval, consisting of two ditches and very fragmentary remains of a building. Much of the potential archaeological horizon had been removed in the post-medieval period, by reworking of the deposits and by the introduction of a brick latrine pit and drainage. The building itself had been modified since its construction in the 18th century, and there was evidence of previous extension to the rear. [Au(abr)]

Work undertaken by: Archaeology South-East

Between February and September 2006, a watching brief was maintained during groundworks associated with a proposed water quality improvement scheme. Together with a small quantity of residual material, the work identified remains from two periods, prehistoric and post-medieval. The prehistoric remains comprised two scatters of worked flint and chert of probably Neolithic and Bronze Age origin from near St Catherine's Hill reservoir, and a small quantity of unstratified probably EBA flintwork from Chale Green. The post-medieval remains consisted of two areas of hard standing and three associated post holes that probably represented the site of a perhaps late 16th to mid 17th century farm building behind "The Old Rectory" on Chale Street. Trott, K : KT Archaeological Services, 2006, 46pp, colour pls, tabs, fig, refs

Work undertaken by: KT Archaeological Services

An archaeological watching brief was conducted following the demolition of a lean-to extension and games room at Willows. The archaeological work preceded the enlargement of an existing car parking

area and the construction of a single storey extension. The archaeological investigation uncovered pits, a ditch and a riverine inlet of late Saxon to medieval date and the remains of a 17th century structure. Dateable pottery was mainly late Saxon and medieval. Bronze Age and Roman sherds (all residual) were also recovered along with Roman tile and prehistoric flintwork. [Au(adp)]

Phase II Archaeological Watching Brief at 'Site J2', Adjacent to Boys Hall Moat, Orbital Park, Ashford, Kent

Found, B Canterbury : Canterbury Archaeological Trust, 2006, 28pp, colour pls, figs

Work undertaken by: Canterbury Archaeological Trust

An archaeological watching brief was carried out during ground works for new industrial units. Two inter-connecting ditches and a small pit of Late Bronze Age to Iron Age date were exposed. A second cut feature was found to be very shallow and did not contain any datable cultural material. A deposit of colluvium was observed along the length of the new road may have masked further remains. The work highlighted the potential for further prehistoric and later remains on the areas earmarked for the construction of units. The presence of prehistoric remains highlighted the use of the area in the later Bronze Age and Iron Age as previously indicated by archaeological work undertaken KARU and during more recent evaluation and excavation to the north-east off Foster Road. T Mildred's Tannery, Canterbury, Phase 2A (Blocks A-D): Preliminary Report on Watching Briefs

Pratt, S and Smith, T Canterbury : Canterbury Archaeological Trust, 2006, 13pp, colour pls, figs

Work undertaken by: Canterbury Archaeological Trust

This report presented a preliminary summary of archaeological work associated with the construction of Phase 2A (Blocks A-D) of the St. Mildred's Tannery Development. Approximately ten percent of the pile positions were pre-augured and the cores recovered logged. Overall the evidence for Roman buildings proved much as expected on the basis of previous work though prompting a few minor revisions. A variety of archaeological features were located by test-pits, dating from the Roman to medieval periods. This included surfaces, walls, structures and trackways. Finds included a mid Anglo-Saxon bronze pin. [(Au(adp)]

THE KING'S SCHOOL GARDEN, CANTERBURY

Archaeological Watching and Recording Brief Within the Garden of the King's School, St. Augustine's, Canterbury

Helm, R and Anderson, I Canterbury : Canterbury Archaeological Trust, 2006, 13pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological watching and recording brief was carried out during groundworks for a new footpath. The groundworks were located in the inner Great Court of the former St. Augustine's Abbey, reused as the King's new Lodgings or Palace following the dissolution in 1538. The stone steps proposed for reinstatement dated to the later foundation of St. Augustine's College. The watching brief monitored the hand excavated trench and identified the surviving footings of the original steps, formed of Caen stone and rag stone capped with brick. A series of deposits were exposed immediately below the topsoil, including a small area of crushed chalk, perhaps flooring, abutting mortar and flint footings, attributed to the still existing steps accessing the walkway from the west. The extent of ground works did not allow for a sufficient assessment of the character, data, extent, quality and condition of the observed archaeology to be made. Accordingly, the ground works have had no measurable impact on the buried archaeological resource. [Au(adp)]

ST LAWRENCE CRICKET GROUND, CANTERBURY

An Archaeological and Historical Desk-based Assessment of the St. Lawrence Cricket Ground, Canterbury, Kent

Found, B and Sweetinburgh, S Canterbury : Canterbury Archaeological Trust, 2006, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

A desk based assessment was undertaken in advance of a proposed redevelopment at St. Lawrence Cricket Ground. The site was located to the south of Canterbury and outside the city walls. The site lay close to the line of the Roman road from Dover to Canterbury and a number of Roman burials had been located previously on the site. The hospital of St. Lawrence founded in 1137 was known to have partially lay under the development site. Some buildings associated with this hospital complex were converted into a mansion house in the late 16th century. A cricket ground was first established on the land of the estate in the middle of the 19th century. [Au(abr)]

Dover Sea Sport Centre: Report on Archaeological Implications of the Development
 Parfitt, K Canterbury : Canterbury Archaeological Trust, 2006, 29pp, colour pls, figs, refs
 Work undertaken by: Canterbury Archaeological Trust
 This desk top study considered the archaeological implications of building a new Sea Sport Centre on the seafront at Dover. The report included a consideration of the topographical and historical context of the site, details of the adjacent historic environment and its importance in the evolution of Dover harbour. The report identified a number of features of potential archaeological interest on this site. It was recommended that the information contained within the report be considered in relation to the foundation details for the new works once these were finalised, so that the most appropriate archaeological response to the new building works could be determined for the next stage. Archaeological Watching and Recording Brief on Land at the Former Kemp's Garage, Chillenden, Kent
 Helm, R Canterbury : Canterbury Archaeological Trust, 2007, 21pp, colour pls, figs, tabs
 Work undertaken by: Canterbury Archaeological Trust
 An intermittent archaeological watching and recording brief was carried out during groundwork for building work. Seventeen site visits were undertaken between September 2005 and December 2006. The natural Upper Chalk was sealed with a layer of colluvium derived from Head deposits. Two later prehistoric worked flints were recovered from the interface of this colluvium, and the topsoil above. Small-scale activity during the medieval period was identified in the northern half of the proposed

development area. This consisted of two inter-cutting pit features, containing medieval pottery, medieval roof tile and daub. Both features were indicative of nearby medieval settlement located within Chillenden. A number of later post-medieval features, including a chalk and flint-lined well, brick-lined cess tank, two brick-lined cisterns and the remnants of an external yard surface, all of which appeared to have been contemporary with the occupation of the existing farmhouse and former workshop/barn were exposed. The observed groundwork had no measurable impact on the buried archaeological resource. [Au(adp)]

RINGLEMERE MONUMENT 1, 2006 (TRENCHES 7 AND 8)

Interim Report on Excavations at Ringlemere Monument 1, 2006 (Trenches 7 and 8)

Canterbury Archaeological Trust Canterbury : Canterbury Archaeological Trust, 2006, 13pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The excavation of trenches 7 and 8 were undertaken in order to conclude the investigation of Monument 1. More of the barrow monument including the ring-ditch was revealed and recorded. An assemblage of Grooved Ware and some Beaker pottery, and a quantity of struck flint was recovered from this feature. There was also a buried horizon underneath the barrow mound which contained many cut features including hollows, pits, post holes and stake holes. There was increasing evidence that the barrow could have been constructed over an earlier ditched enclosure constituting a henge monument. Other finds included the partially complete skeleton of a medieval cow. [AIP]

KENT NO.5 FEEDER PIPELINE DIVERSION***Kent No.5 Feeder Pipeline Diversion, Kent. Archaeological Investigation Report***

Lambert, N Oxford : Oxford Archaeology, 2006, 9pp, figs, refs

Work undertaken by: Oxford Archaeology

An archaeological investigation on the diversion of Kent No.5 Feeder Pipeline was undertaken. Although the pipeline diversion work was specified as "strip, map and sample", archaeological visibility was invariably very poor throughout all areas, due to the presence of a silty clay horizon, a plough-disturbed head or colluvial deposit. As the topsoil stripping was a temporary measure, undertaken to provide working and spoil storage areas, there was no justification for removing the deposit to expose archaeological features. The only permanent impact of the scheme was the pipe trench itself, a narrow slot in which no archaeological features were visible. A watching brief was maintained on the topsoil stripping, but no significant archaeological finds or deposits were discovered. [Au(adp)]

CHARLTON COURT, EAST SUTTON, MAIDSTONE***Charlton Court, East Sutton, Maidstone, Kent, Results of an Archaeological Excavation***

Capon, L Twickenham : AOC Archaeology Group, 2007, 18pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological excavation was undertaken in the northern field at Charlton Court, a Grade II Listed property on the south slope of the Beult Valley. Excavation was targeted upon a stone structure identified during evaluation trenching the previous year and a watching brief was also undertaken. The excavation found a stone foundation for a boundary wall, and the remains of a stone-capped drain which had been fed from a property uphill of the site, in an area beyond the limit of excavation. The limited finds suggested a medieval date for the property boundary, which may have been a dry stone wall or similar field boundary. The owners of the site in the medieval period were undoubtedly of high status, and this was the first definite evidence on site for buildings pre-dating the standing Charlton Court building. Compass Archaeology London : Compass Archaeology, 2006, 14pp, colour pls

Work undertaken by: Compass Archaeology

An archaeological watching brief took place on a development site. All three trenches exposed a similar sequence of deposits, with recent made ground and reworked soil horizons overlying sterile material. Apart from the cut for the modern roadside wall there were no discrete features. The few pottery finds (and rarely glass fragments) that were recovered dated back to the 19th and 20th centuries. There was also some fragmentary unglazed brick and tile but no definitely earlier material. [Au(abr)]

SEVENOAKS SEWER REPLACEMENT PROJECT. SEAL BRANCH TRUNK SEWER. SEAL TO OTFORD***Sevenoaks Sewer Replacement Project. Seal Branch Trunk Sewer. Seal to Otford, Kent. A Post Excavation Archaeological Assessment Report***

King, G London : Compass Archaeology, 2007, 78pp, pls, figs, tabs, refs

Work undertaken by: Compass Archaeology

An archaeological watching brief was undertaken along the proposed route of the Seal Branch Trunk Sewer Replacement Project. During topsoil stripping operations, two previously unknown prehistoric burnt mounds were revealed. Subsequent archaeological excavation of one of the mounds revealed apparently two phases of activity and a series of structures and cut features associated with the earlier phase of the mound, the contents of which afforded the preservation of environmental data, which should have provided dating and other evidence concerning its nature, usage and possibly later abandonment. BLIGHS MEADOW, LAND TO THE REAR OF NO.S 46-52 LONDON ROAD, SEVENOAKS

Blighs Meadow, Land to the Rear of No. S 46-52 London Road, Sevenoaks, Kent. Sevenoaks District Council. An Archaeological Watching Brief

Compass Archaeology London : Compass Archaeology , 2006, 23pp, colour pls, figs, tabs

Work undertaken by: Compass Archaeology

An archaeological watching brief took place on a retail development site. The watching brief did not reveal any significant remains, nor were there any finds of pre 19th century date. A simple sequence of recent made ground and reworked soil overlay a largely sterile soil and weathered natural. The only notable feature was a brick-lined and domed well exposed in the basement excavation which intrinsically and on map evidence was dated to c.1870-90. The well may have been contemporary with the adjacent buildings (50-52) and was possibly constructed to serve both properties. Shallow brick rubble footings noted elsewhere on site could have related to mid 19th century or later buildings. It was likely that the site area remained open agricultural land until the mid 19th century. Subsequent maps showed the progressive development of the site from south to north as the town expanded. LAND AT CLAXFIELD FARM, LYNSTEAD LANE, LYNSTEAD, SEASON 2006
Archaeological Investigations In Advance of and During the Extraction of Brickearth on Land at Claxfield Farm, Lynstead Lane, Lynstead, Season 2006
 Shand, G Canterbury : Canterbury Archaeological Trust, 2006, 21pp, colour pls, figs
Work undertaken by: Canterbury Archaeological Trust
 During May and June 2006 a two-stage archaeological investigation was carried out on land designated for brickearth extraction at Claxfield Farm. The site lay a short distance south of the main London to Canterbury Roman road. Roman and medieval remains had been found a short distance to the west. Important Mesolithic and Palaeolithic remains had also been found within brickearth deposits a short distance to the west of Bapchild. During the first strip of land stage, four medieval inter-cutting linear ditches were located at the southern end of the site and a single animal burial of probable more recent date was revealed. The second stage of the works was an intermittent watching brief of the extraction of brickearth. No archaeological remains were encountered during this stage. [Au(adp)]

TONBRIDGE SCHOOL, HIGH STREET, TONBRIDGE

An Archaeological Watching Brief at Tonbridge School, High Street, Tonbridge, Kent

Margetts, A Ditchling : Archaeology South-East, 2006, 19pp, colour pls, figs, refs

Work undertaken by: Archaeology South-East

An archaeological watching brief was undertaken during excavations associated with a new school building. The groundwork revealed the presence of Victorian landscaping and levelling at the site as well as a rendered brick structure and a dump of butchery waste. The quantity of finds retrieved from the site was mainly derived from the 18th and 19th centuries and included a French coin of Napoleon III. [Au(abr)]

The Results of an Archaeological Watching Brief and Investigation at Old Soar Farm, Plaxtol, Tonbridge, Kent

Swale & Thames Survey Company Faversham : Swale & Thames Survey Company, 2006, 17pp, colour pls, figs, refs

Work undertaken by: Swale & Thames Survey Company

An archaeological watching brief was undertaken for a house extension. One of the foundation trenches which ran parallel to the farmhouse exposed areas of archaeological interest. The trench exposed two areas of medieval stone walls built of large lumps of Kentish Ragstone set in a lime mortar with associated stratification. One of the areas of medieval walls running north-west, south-east was badly truncated by a cut for a modern sewer pipe, but excavation of the foundation bed of lime mortar below the pipe revealed in a secure context a single fresh, large sherd of early medieval shell-tempered pottery dated to about c.1150-1175/1200AD. No other archaeological features apart from the associated stratification to the two medieval walls were revealed during the cutting of the foundation trenches. [Au(abr)]

Work undertaken by: Archaeology South-East

A watching brief was undertaken during groundwork associated with the construction of a stable block and sand school. The work identified one significant archaeological feature. The base of a possible midden produced a large quantity of pottery dating predominantly to between mid/late 14th century and mid 15th century, but also contained sherds from a later 13th century cooking pot. Although no associated features were identified, it was likely that further medieval remains lay nearby beyond the bounds of the application area. [Au(adp)]

SMURFIT, TOWNSEND HOOK, HIGH STREET, SNODLAND
Archaeological Metal Detecting Survey at Smurfit, Townsend Hook, High Street, Snodland, Kent

CgMs London : CgMs, 2007, 9pp, figs, refs

Work undertaken by: CgMs

A metal detecting survey was carried out prior to a development. There were sufficient numbers and concentration of signals at this site to show that significant metal objects were present at the site. It was in one of these areas of concentrated signals, i.e. the south-eastern boundary, that previous archaeological work had shown not just a Roman coin hoard but archaeological Roman stratigraphy, which suggested a wider presence of Roman archaeology at this site. NO.1 SMITHERY HISTORIC DOCKYARD, CHATHAM

An Archaeological Watching Brief at No.1 Smithery Historic Dockyard, Chatham

Ward, A Canterbury : Alan Ward, 2007, 21pp, figs, refs

Work undertaken by: Alan Ward

A watching brief was undertaken during the digging of pits and trenches in and around the early 19th century No.1 smithery building. The work revealed that substantial, well preserved industrial archaeology remains survived within the site. The overall layout and the undoubted and undocumented additions and repairs to the wind drains and other structural features could not have been fully understood by the excavation of small trenches. As so often in archaeology, it would only be by open area excavation that such phasing and overall layout could be understood in any detail. [Au(adp)]

Work undertaken by: Archaeological Services & Consultancy Ltd.

Archaeological finds or features were absent in the section of trench outside the church and human remains were not disturbed within the churchyard. Six decorated floor tiles, probably manufactured at the Little Brickhill kilns during the early 15th to late 16th centuries, were discovered in a small excavated area within the church building and may have formed part of the original 16th century floor. Blocks of limestone located at the base of the area excavated within the church appeared deliberately laid and could have suggested that the remains of an earlier structure underlay the extant building. Work undertaken by: Archaeological Solutions

In contrast to the evaluation, which identified predominantly post-medieval archaeology, the excavation uncovered medieval plot boundaries dating to the 13th to 15th centuries. The medieval activity was divided into three phases. Phase 1 consisted of a boundary ditch, Phase 2 consisted of a ditch and areas of trample suggestive that the land had shifted to pastoral use, Phase 3 (14th-16th century) was concerned with the modification of the pastoral landscape and Phase 4 consisted of cobbled yard surfaces associated with farm buildings that stood on the site up until WWII. Work undertaken by: John Moore Heritage Services

The excavation recorded early agricultural ditches backfilled prior to the construction of a fourteenth or fifteenth century building, a French drain of horn cores that ran parallel to and behind the building, a second drain covered the main entrance to the dwelling. The building had gone out of use by the

seventeenth century and had collapsed by the eighteenth century. Also located were three ditches associated with agriculture or a market garden, dating from the fourteenth century onward. Also located were two sherds of residual Romano-British pottery. The watching brief revealed a well ashort distance away, probably associated with the dwelling. [Au(abr)]

SOUTH PARKS ROAD, OXFORD*Biochemistry Building Phase 1. South Parks Road, Oxford. Archaeological Watching Brief Report*

Cook, I Oxford : Oxford Archaeology, 2006, 24pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The watching brief revealed a series of linear features which were dated to the late Iron Age/early Romano-British period as well as a series of post-medieval rubbish pits. A group of seven post holes was uncovered which may have represented a fence line or similar structure. Four substantial post holes were seen at the bottom of a tree throw hole, however, their purpose was not clear. The linear features represented the ongoing use of the area for agriculture during the Late Iron Age/ early Roman period, whilst the pits suggested that the area was subsequently used for the limited disposal of domestic waste during the post-medieval period. CHISELHAMPTON HOUSE, CHISELHAMPTON

An Archaeological Excavation at Chiselhampton House, Chiselhampton, Oxfordshire

Williams, G Beckley : John Moore Heritage Services, 2006, 43pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

Excavations revealed an archaeological sequence extending from the late Iron Age to the 19th century. Two field systems spanning the late Iron Age and early Roman periods were the earliest dated features; medieval activity associated with the manor was excavated on the east side of the site and overlying all were two phases of gardens, including the later phase part of formal and kitchen gardens. The remains of post-medieval buildings were also encountered. In addition, a watching brief was also undertaken during topsoil stripping associated with the main excavation which evidenced a building, a yard and field boundary to the north in the historic Church Close; additionally pipetrenching revealed the remains of the ha ha or pale ditch between the inner park and the outer park to the south of the site. LAND AT OXFORD DOWNS CRICKET CLUB, ABINGDON ROAD, STANDLAKE
An Archaeological Watching Brief on Land at Oxford Downs Cricket Club, Abingdon Road, Standlake

Moore, JBeckley : John Moore Heritage Services, 2006, 8pp, figs, refs

Work undertaken by: John Moore Heritage Services

Excavation of parts of two roads and a house plot and garage plot towards the north of the site were examined. Features were recorded across the site with concentration on the north edge of the site. No dateable artefacts were forthcoming from the features and without this it was very difficult to discuss what had been found. However, two different alignments were present and it was argued that along with medieval and/or post-medieval plots associated with Abingdon Road, earlier activity was also present on two different alignments. WHITEHALL PUBLIC HOUSE, KINGSTON ROAD

Watching Brief at Whitehall Public House, Kingston Road, Portsmouth

Thompson, G L Southampton : Southampton City Council Archaeology Unit, 2007, 14pp, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

A total of sixteen trenches were observed. The garden soil was cut by a series of pits. One contained numerous fragments of clay tiles, perhaps from the demolition of a predecessor to the Whitehall Public house, another may have been a lime pit associated with the building of new structures. A date in the

late 18th or the first quarter of the 19th century was likely. A brick well also dated to this period. A wall built of Purbeck stone ran along the northern edge of the site. [Au(abr)]

KIMPTON MANOR
An Archaeological Watching Brief at Kimpton Manor, Hampshire
 Entwistle, R Aldermaston : Berkshire Archaeological Services, 2006, 12pp, figs, tabs, refs
Work undertaken by: Berkshire Archaeological Services
 The watching brief uncovered a number of features which seemed likely to have been associated with building work at the house during 18th and 19th centuries. The small numbers of finds include medieval and post-medieval pottery, but none of the material was securely stratified. A backfilled well was partly excavated and produced a small assemblage of 17th to 18th century pottery and a clay tobacco pipe of a type that was in use between AD 1660 and AD 1680. [Au(abr)]

Initial Evaluation Excavation at the Former Kwik Fit Site, St. Mary Street, Southampton
 Garner, M Southampton : Southampton City Council Archaeology Unit, 2006, 34pp, colour pls, figs, tabs, refs
Work undertaken by: Southampton City Council Archaeology Unit
 Two evaluation trenches were excavated and revealed unstratified middle Saxon pottery. A watching brief found evidence of medieval activity comprised of two large features, a late medieval ditch, pits and post holes. Whilst there was considerable modern disturbance around the fuel tanks, ancient deposits were present across the site. [Au(abr)]

Russel, JSouthampton : Southampton City Council Archaeology Unit, 2006, 16pp, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

The excavation of four trenches just south of Southampton Common and north of a known Neolithic site uncovered twelve features. Seven had the appearance of tree disturbances, but the other consisted of two linear features, a square feature and two circular features. These were probably the result of human activity. Burnt flint and charcoal was recovered from the tree disturbances and the more definite features. A prehistoric date was suggested for the removal of the trees and the excavation of the features. NURSES COTTAGE, OLD PALACE ROAD, WEYBRIDGE

An archaeological watching brief at Nurses Cottage, Old Palace Road, Weybridge

Poulton, R Woking: Surrey County Archaeological Unit, 2006, 9pp, figs, refs

Work undertaken by: Surrey County Archaeological Unit

The watching brief was undertaken in fulfilment of a condition attached to the grant of Scheduled Monument Consent and the grant of planning permission, for extension to the present building. It revealed that the area had seen substantial build-up in level (over 1m) since the demolition of the palace in 1650. At the base of this build-up and directly overlying undisturbed sand was a layer from the palace demolition. It was unclear what this implied with regard to the location of the site in relation to the palace. [Au(adp)]

PROPOSED RE-DEVELOPMENT OF LAND AT 'HIGHCLERE', CAMP END ROAD, ST. GEORGES HILL, WEYBRIDGE

Geoarchaeological investigation of proposed re-development of land at "Highclere", Camp End Road, St. Georges Hill, Weybridge

Green, C & Shaikhley, N Woking: Surrey County Archaeological Unit, 2006, 9pp, figs, refs

Work undertaken by: Surrey County Archaeological Unit

A preliminary archaeological assessment of the proposed re-development for the site was carried out and consisted of observation of the deep excavations associated with the terracing of the site to facilitate the construction of the new house. The made ground noted in the bore hole survey was apparent over the whole site and the potential for finding features or finds relating to the Iron Age occupation of the adjacent hillfort was therefore negligible. No finds of archaeological origin or features were recorded. [Au(adp)]

Stevenson, J Ditchling : Archaeology South-East, 2006, 12pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological watching brief was carried out at the site during the redevelopment . Five site visits were made from January to March 2006. The groundwork monitored were removal of the concrete slabs which underlay the previous buildings, grubbing out of existing foundations and electricity substation and hand excavated trenches to locate services/foundations. The site was found to have been almost entirely truncated by modern building work and services. No archaeological features or artefacts were present. [Au(adp)]

UNITS 11 AND 12 ELMSLEIGH CENTRE, STAINES***Units 11 and 12 Elmsleigh Centre, Staines, County of Surrey - an Archaeological Watching Brief Report***

Menary, C London : Museum of London Archaeology Service, 2006, 25pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The watching brief revealed that the site straddled the gravel island on which Roman Staines was built. Natural gravel was observed at 48.5m OD at the north end of the site. The southern end contained alluvial deposits at 47.99-48.41m OD. A possible channel or depression was observed in the southern end, filled by an organic layer, and all of the southern area was covered by a uniform layer of alluvium containing residual Roman finds dating to AD 50-120. This deposit could have related to the flooding of the Roman settlement which occurred around AD220. A thick deposit of post-medieval dumping dating to AD 1740-1800 was observed in one trench, possibly an effort to raise ground level. All of top layers in each trench were truncated by modern dumps and service cuts. [Au(adp)]

Entwistle, R & Henderson, M Aldermaston : Berkshire Archaeological Services, 2006, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Berkshire Archaeological Services

Planning approval for ten newly built dwellings and two barn conversions was conditional on the implementation of a programme of archaeological and building recording work. The results of a watching brief at the site were entirely negative, despite the presence of remains in the immediate vicinity. The 19th century barns at the site were recorded, and provided a picture of the movement of the farm towards mechanised farming. [Au(adp)]

ARUN COMMUNITY HOSPITAL, FITZALAN ROAD, LITTLEHAMPTON

Archaeological Investigations at Arun Community Hospital, Fitzalan Road, Littlehampton, West Sussex

Archaeology South-East Ditchling : Archaeology South-East, 2006, 13pp, figs, tabs, refs, CD

Work undertaken by: Archaeology South-East

Following a Stage 1 evaluation (October 2005), an archaeological excavation was carried out prior to the construction of a new NHS community hospital at Fitzalan Road, Littlehampton. The excavation covered an area measuring approximately 25m x 16m, and was located over the position of trial trench 4, from the initial evaluation. This trench had revealed two Roman cremation urns, and several cut features, including a pit and gullies, of uncertain date. Although no further cremations were discovered, a number of linear features and pits were revealed during the excavation. The archaeological remains were generally very shallow, having been severely truncated by the foundations of the former hospital building. With the exception of several sherds of Roman greyware pottery, the only artefacts recovered from the site were fire-cracked flints and waste flint flakes, and a small abraded fragment of possible Bronze Age pottery. A late Victorian bottle dump containing a number of stoneware bottles and glass vessels, bearing the name of a local brewery, was also found. [Au(abr)]

LOWER STREET, FITTLEWORTH

Summary Report on the Results of an Archaeological / Geoarchaeological Watching Brief at Lower Street, Fittleworth, West Sussex

Pine, C A Ditchling : Archaeology South-East, 2006, 13pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological watching brief was maintained between the 12th June and 14th July 2006 during the installation of a new rising main and new pumping station and c.370m length of 150mm diameter service conduit / pipe at Lower Street, Fittleworth. Approximately 0.6m of made ground overlying alluvial silts was recorded at four locations, with between 1.50m-2.50m of made ground being recorded at two locations. The sharp contact to alluvial silts and the presence of modern fill debris comprising of CBM and ferrous inclusions in the upper c.0.30-0.50 metres of alluvial silts would tend to suggest silts have been truncated, probably during installation of the existing service road. No archaeological features were observed or recorded at any surveyed location. [Au]

Rake and Vinings, Habin Bridge And Durford Bridge, Rogate, West Sussex

Priestley-Bell, G Ditchling : Archaeology South-East, 2006, 19pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

Between 24th February 2006 and 9th June 2006, a watching brief was maintained during groundwork associated with a water supply mains upgrade at two locations: Habin Bridge (also known as Rogate Bridge) and Durford Bridge, Rogate. At both locations a considerable depth of gravel road base was identified, suggesting the likelihood that the existing road surface was considerably higher than in the past. Although no direct evidence for this was found at Durford Bridge, at Habin Bridge a section of well constructed stone-built roadway was found c.800mm below the existing tarmac road. [Au(abr)]

LAND TO THE REAR OF 9 HIGH STREET, TWYFORD*Land to the Rear of 9 High Street, Twyford, Berkshire*

King, R Swindon: Foundations Archaeology, 2006, 17pp, figs, refs

Work undertaken by: Foundations Archaeology

One medieval ditch and two late medieval ditches were identified during the course of the works Area 1, along with two undated post holes and an undated pit. It was possible that the late medieval ditches may have represented boundary features associated with the plots running back from the High Street. No archaeological features were identified in Area 2, which had clearly been extensively disturbed by modern activity. [Au]
