Avon Archaeological Unit Bristol : Avon Archaeological Unit, 2006, 16pp, colour pls, figs, tabs, refs

*Work undertaken by:* Avon Archaeological Unit

The objective of the programme was to recover artefacts and record all archaeological features and deposits exposed during preliminary groundwork for the construction of a residential unit on the site. This involved a small reduction in the ground level of the site and the excavation of standard strip foundations. With the exception of a post-medieval water cistern, a short length of culvert and fragments of probable post-medieval garden wall, no significant archaeological structures, deposits or artefacts were revealed during the reduction of the ground level or the excavation of the building footings. After monitoring of approximately 75% of the groundwork it was concluded that archaeologically significant remains were unlikely to be present elsewhere within the development area and, after consultation with the City Archaeologist for Bristol, the archaeological monitoring was terminated. The objective of the programme was to recover artefacts and record all archaeological features and deposits exposed during preliminary groundwork for the excavation of a Reduced Level Platform for new 55 residential properties for elderly persons. Those deposits recorded comprised modern made-up ground deposits overlying archaeologically sterile deposits of geological origin. At the south end of the site the overburden also overlay a sequence of earlier buried surfaces including topsoil and subsoil. These deposits were undated but were not thought to represent material of archaeological significance. No significant archaeological features, deposits or finds were located during the course of the development work. [Au]

The objective of the watching brief programme was to recover artefacts and record all archaeological features and deposits exposed during preliminary groundwork for the construction of new residential properties. Pre-demolition photographs of the building were included in the project archive. The site work included general ground level reduction as well as excavation of standard strip foundation trenches. After the initial reduction in ground level, the upper surface of the underlying geological deposits was exposed across the site and no further observation was therefore necessary. Accordingly, the watching brief was terminated. [Au(adp)]

### SMITHICK HILL, FALMOUTH

*Smithick Hill, Falmouth, Cornwall. Results of Archaeological Recording*

Capon, L Twickenham : AOC Archaeology Group, 2006, 20pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological watching brief and building recording found various stone structures: a set of steps, a stone wall and a stone floor were all present and appeared to all be of post-medieval date. The limited finds were porcelain, suggesting a 19th century date at least for some of the features, which may have been part of the same structure: the wall and floor surface associated with one another and the stone steps accessing the upper floors. Birbeck, V Salisbury : Wessex Archaeology, 2006, 20pp, colour pls, figs, tabs, refs

*Work undertaken by:* Wessex Archaeology

Four sites of potential archaeological relevance were located along the route of the pipeline. The earliest material recovered was a piece of prehistoric flint and three Bronze Age pottery sherds. A post-medieval linear feature and the remains of a contemporary building were encountered. In all, very few archaeological features were encountered despite careful monitoring. Those that were thought to be of any significance were preserved by the slight alteration of the pipeline route. [Au(adp)]

*Work undertaken by:* Cornwall Archaeological Unit

A programme of archaeological recording included controlled topsoil strips in five areas considered to be of high archaeological potential, a wide-ranging watching brief, test pitting in the vicinity of a possible flint scatter near Grochall and the recording of historic boundaries cut by the pipeline corridor. The watching brief identified a series of archaeological features ranging from a scatter of 47 prehistoric flints, found in association with Beaker, Neolithic, Iron Age, Romano-British and early medieval pottery, a curvilinear feature of possible prehistoric or Romano-British date, two charcoal rich pits or hearths, one of which was able to be dated from the Romano-British pottery fragments found within it,

to a large number of ditches, boundaries and other landscape features from both the medieval and post-medieval periods. [Au(abr)]

### **TREGIDDEN BRIDGE**

*Tregidden Bridge, Cornwall. Archaeological Rapid Assessment and Watching Brief*

Ruddle, E Truro : Cornwall Archaeological Unit, 2006, 24pp, pls, figs, refs

*Work undertaken by:* Cornwall Archaeological Unit

Listed building consent had been granted for strengthening works to the bridge. Two excavated trenches were positioned over each span after which a detailed photographic survey and scaled drawings were undertaken. The granite lintels exposed during the works both displayed the presence of 'wedge and groove' markings, as well as distinctive 'feather and tare' drill markings indicating perhaps the transitional phase of both techniques. An early 19th century date could be attributed to the bridge but it was possible that it may have had earlier origins. [Au(abr)]

**THE DODMAN***The Dodman, Cornwall. Archaeological Watching Brief on Trenching For Installation of a Replacement Lightning Conductor*

Kirkham, G Truro : Cornwall Archaeological Unit, 2006, 24pp, pls, figs, tabs, refs

*Work undertaken by:* Cornwall Archaeological Unit

An archaeological watching brief was conducted for a replacement of a lightning conductor at the Dodman. At the same time, the opportunity was taken to inspect the surface of the adjacent footpath, on which several pieces of worked flint had previously been observed. No cut features or *in situ* deposits were identified during the watching brief on the trench. However, a small but interesting assemblage of worked flint items was recovered, including pieces diagnostic of both Mesolithic period and the Late Neolithic-Early Bronze Age. The presence of burnt flint suggested some form of occupation of the site during the latter period. [Au(abr)]

**GOLANT SEWAGE TREATMENT SCHEME***Golant Sewage Treatment Scheme, Cornwall. Archaeological Watching Brief*

Cole, D &amp; Mossop, M Truro : Cornwall Archaeological Unit, 2006, 41pp, pls, figs, tabs, refs

*Work undertaken by:* Cornwall Archaeological Unit

The proposed location of the works compound would have impacted upon a known prehistoric enclosure, but the decision was taken to place the compound elsewhere and not damage the archaeological remains in this area. Little of archaeological significance was identified along the pipeline corridor. Where the trench cut through the built-up area of Golant, most of the excavation

work was undertaken within the existing road corridor and therefore archaeological remains were not affected. A series of extant and removed field boundaries were also recorded in the fields to the north-west of Golant. [Au(abr)]

*Work undertaken by:* Exeter Archaeology

The archaeological work undertaken during the coast protection works has resulted in the preparation of a record of the 1841-2 sea wall. The wall itself was constructed in line with Smeaton's specification, as was, to a certain extent, the wooden toe. Some of the differences between the specification and the actual construction of the toe may have related to alterations made following damage to the sea wall during the mid 19th century. No other remains, including defensive works dating to the Second World War, were exposed during the coast protection works. [Au(adp)]

Hughes, S D Exeter : Exeter Archaeology, 2006, 8pp, figs, refs

*Work undertaken by:* Exeter Archaeology

Groundwork for the new extension comprised the machine-excavation of foundation trenches, many of which revealed extensive disturbance caused by a previous modern building on the site. However, a series of ditches was present at the northern end of the site. The nature of their fills and general paucity of finds recovered from them indicated that they related to agricultural rather than settlement activity. The ditches were certainly pre-modern in date, and their presence at different levels within the layer sequence suggested that more than one period was represented. [Au(abr)]

**REPLACEMENT OF GASPIPES AT ASHFORD ROAD, TOPSHAM, EXETER**  
*Archaeological Monitoring and Recording During Gas Pipeline Replacement at Ashford Road, Topsham, Exeter*

Dyer, MJ Exeter : Exeter Archaeology, 2006, 12pp, tabs, refs

*Work undertaken by:* Exeter Archaeology

A programme of archaeological monitoring and recording was undertaken as the pits were excavated on the line of the existing gas main or connections. All the pits outside the line of Ashford Road lay within an area of post-medieval tenement plots, and deposits of cultivation soil were identified to depths of 0.50-0.65m around Orchard Way, and 1.0m around the Mede. Exposures of undisturbed natural subsoil were recorded at depths of 0.24m below ground level in Ashford Road, 0.65m in Orchard Way and 1.0m in The Mede. Archaeological features were identified in five sites. It was not possible to establish the extent and function of Cuts 503 (in Pit 3) and 527 (in Pit 26), as they had been truncated by service trenching. Neither of them contained finds. The steep-sided linear cut 505 (in Pit 4) contained no dating evidence, but from its character and position could possibly be part of a Roman military ditch. Cut 512 (in Pit 10) was probably a linear feature. It produced no finds, but its orientation and position may indicate that it was a boundary ditch of post-medieval date between two tenement plots. Feature 519 contained finds of Roman date, but as it cut what were interpreted as post-medieval and possibly medieval cultivation soils, this material was thought to be residual. It was not possible to establish if the cut was a pit or linear feature. If it was linear, its alignment does not correspond with that of the tenement plots. [Au(abr)]

*Excavation at Kenton Parish Church in 2006*

Allan, J Exeter : Exeter Archaeology , 2006, 16pp, figs, refs

*Work undertaken by:* Exeter Archaeology

Excavation within the west end of Kenton parish church revealed evidence for a long aisleless nave, preceding the present nave and aisles of the 15th century; a south aisle was added to it, perhaps in the late 14th century. The area was packed with burials. The earliest, of unknown date, were probably in shrouds; the latest, dating to the 18th and early 19th centuries, were in coffins and brick-lined vaults. Also found were a series of late medieval tiles and evidence for medieval bell-casting. [Au(abr)]

Southwest Archaeology Helston : South-West Archaeology , 2006, 19pp, colour pls, figs, tabs, refs

*Work undertaken by:* Southwest Archaeology

There was little evidence in the two areas of any medieval or earlier activity, apart from two unstratified finds of medieval pot sherds. Within the area for the proposed stable block a wide depression was observed. This was interpreted as the result of small scale stone quarrying, perhaps local use in rubble walling. The only other feature of note was the sectioned hedge-bank which ceramic and cartographic evidence would suggest as being post-medieval in date. Within the area of the Sand School the only features observed were ploughmarks. [Au]

Southwest Archaeology Helston : South-West Archaeology , 2006, 21pp, colour pls, figs, refs

*Work undertaken by:* Southwest Archaeology

The north and south access road and the east access road were stripped to subsoil to reveal weathered shale. A number of pairs of linear features were revealed, all bar one running north-south. These presumed boundary ditches indicated that the site was a medieval field system. Two other features were recorded, the first a hearth of medieval date. The second was an ovoid pit, the fill of which contained six sherds of Middle Bronze Age pottery. [Au(abr)]

Whitehead, B St Denys : Southern Archaeological Services, 2006, 43pp, figs, tabs, refs

*Work undertaken by:* Southern Archaeological Services

An archaeological excavation comprising two trenches was carried out. Evidence of medieval activity was recovered from several features in both trenches, and from the subsequent watching brief. The archaeological evidence was mainly in the form of rubbish pits, and no structural features were identified, which suggested that the plot was not developed for housing in the medieval period. The evidence showed residual prehistoric and Roman finds and a low level of activity in the later medieval period. Post-medieval features included a well and a very large deep feature for which no definite function could be assigned. [Au(abr)]

Wright, N Gloucester : Gloucestershire County Council Archaeology Service, 2006, 27pp, colour pls, figs, tabs, refs

*Work undertaken by:* Gloucestershire County Council Archaeology Service

The archaeological excavation within the school grounds revealed evidence of a Roman surface and the remains of a collapsed/demolished building within insula IV of the Roman town. These Roman deposits were encountered at depths of between 0.55m and 0.7m below ground level. The dating evidence suggested the demolition/collapse took place some time after the 3rd century AD. The earliest archaeological deposit within the immediate area of the new sports hall revealed possible Roman deposits at a depth of c.1.55m. Overlying the Roman deposits was evidence of post-medieval landscaping, most likely associated with agricultural and garden use, which had heavily truncated earlier deposits. [Au(abr)]

**LAND OFF STATION ROAD, KEMBLE*****Land Off Station Road, Kemble, Gloucestershire. Archaeological Excavation***

Cudlip, D Cirencester : Cotswold Archaeology, 2006, 15pp, figs, tabs, refs

*Work undertaken by:* Cotswold Archaeology

The development area was stripped of topsoil and subsoil and excavated in a number of stages to minimise disruption to the construction programme whilst ensuring that the objectives of the archaeological programme were fulfilled. Three phases of archaeological activity were identified at the site, these being Beaker, Romano-British and medieval. The only Beaker period feature was pit 1026 which was previously identified during the course of an evaluation in 2000. A flint flake of late Neolithic to early Bronze Age was recovered from the fill of ditch 1005, and may have indicated that it was broadly contemporary with pit 1026. The Romano-British features comprised an L-shaped ditch indicative of the north-western corner of a field or enclosure. Medieval activity was restricted to two probable furrows. Two features remained undated; a stone-lined pit that may have been a small pond or cattle watering hole and a sheep burial that had previously been interpreted as a human inhumation during the preceding evaluation. **LAND TO THE SOUTH AND WEST OF THE GLOUCESTER BUSINESS PARK, BROCKWORTH**

***An Archaeological Excavation on Land to the South and West of the Gloucester Business Park, Brockworth, Gloucestershire***

Hickling, S Gloucester : Gloucestershire County Council Archaeology Service, 2006, 42pp, colour pls, figs, tabs, refs

*Work undertaken by:* Gloucestershire County Council Archaeology Service

An archaeological excavation was carried out on part of the old Brockworth airfield being redeveloped for housing. The archaeological work was carried out as a result of previous geophysical and trenching investigations which identified a possible Roman farmstead site. The farmstead was founded in the 2nd-3rd centuries, probably as a primarily a stock-rearing farm. The excavation produced mainly ovine and bovine bone and no evidence of cereals. The farm buildings were not investigated, but an earlier evaluation produced evidence of foundation trenches, beam slots, pits and post holes. Finds of unstratified ceramic box flue tiles, roof tiles and stone roof tiles indicated a farm of some importance. The excavation examined the south-western boundary of the farmyard, its internal sub-divisions and an external inhumation burial. It fit within an area of dense Roman agricultural activity with two villas and two to three other farmsteads in the immediate area. One Roman ditch within the excavation area continued in use until the medieval period. [Au(abr)]

Passmore, A J Exeter : Exeter Archaeology, 2006, 10pp, colour pls, figs, tabs, refs

*Work undertaken by:* Exeter Archaeology

A watching brief was carried out during enveloping works at the Mills and Bakery Building in Plymouth. Construction of the building commenced in c.1830. The building was designed to incorporate a bakery, with adjacent wings (lofts), and mills to the north flanking central engine houses and a boiler room. The mills and the bakery were connected by a central span block, the design of which was amended during its construction. This created two small courtyards. Baking appears to have started in the mid 1840s and continued through until 1925, although by that date at least part of the mills had been converted into stores. [Au(adp)]

**GAS MAIN REPLACEMENT AT HOE ROAD**

*Archaeological Recording During Gas Main Replacement at Hoe Road, Plymouth*

Exeter Archaeology Exeter : Exeter Archaeology, 2006, 8pp, figs, refs

*Work undertaken by:* Exeter Archaeology

The scheme took place within an area defined as a Scheduled Ancient Monument of National Importance (SAM) No. Devon 446. The replacement gas main operations in the area of Hoe Road and the Citadel had not disturbed any significant archaeological remains or deposits. The fill material in Trench 1 probably related in part to the late 1888 modifications to the outer defences, but it may also have related to later landscaping works, as the artefacts recovered could not reliably confirm a date. In pit 1a the construction material for the 1888 road surface over original ditch was encountered. The one sherd of 17th century "Westerwald" pottery from the deposit below the granite setts was a residual sherd from the 1888 ditch infilling episode. [Au(adp)]

Archaeological monitoring of groundwork observed a substantial cut in the surface of the natural strata, the near vertical western edge of which extended the full width of the area under investigation. The full extent of this, either in plan or profile, could not be determined but its greater scale suggested it may have served as a pond or have been created as a quarry for the extraction of limestone. Pottery from a layer of silting inside the feature suggested that it may have remained open in the 13th century. [Au(abr)]

*Work undertaken by:* C. & N. Hollinrake Ltd.

A controlled field walking exercise in concert with an archaeological watching brief was undertaken prior to, and during, topsoil stripping. Numerous flint tools and flakes were recovered and were indicative of Neolithic and Bronze Age activity in the area. Pottery recovered during the field walking included medieval and post-medieval sherds, which were probably related to the apparently deserted settlement at Leighton. Seven small sherds of possible Romano-British pottery and a fragment of possible Romano-British glass was also recovered. Grubbed-out field boundaries were identified between Phase 3 and Phase 4N fields, these grubbed-out hedges apparently followed the natural geological fault lines between the carboniferous limestone and degraded oolite formations. **THE CHAPTER HOUSE AND UNDERCROFT, WELLS CATHEDRAL*****Archaeological Excavations South of the Chapter House and Undercroft, Wells Cathedral***

Hollinrake, C &amp; Hollinrake, N Glastonbury : Charles &amp; Nancy Hollinrake, 2006, 32pp, colour pls, figs, tabs, refs

*Work undertaken by:* C. & N. Hollinrake Ltd.

Two trenches were excavated to investigate the foundations of the Chapter House at Wells Cathedral produced evidence of a broad shallow palaeochannel orientated roughly east-west, apparently leading towards the springs to the east of the Cathedral, from which the city of Wells takes its name. Nineteenth century underpinning works to one of the buttresses appeared to have been prompted by the buttress settling into this channel. One of the trenches produced evidence of a blocked doorway and mortar spread which may have represented the door and floor of the fifteenth century casting house, mentioned in written sources but not identified on any maps of the Cathedral precinct. *Work undertaken by:* James L Brigers

An archaeological watching brief found that outside of an extensive area of 19th century and later disturbance the presence of three pit features cutting into bedrock was revealed. One pit was steep sided and likely to have been prehistoric, the other resembled a quarry pit and the third was stained red from being heated to high temperatures. [Au(adp)]

anon. Chicklade : AC archaeology, 2006, 20pp, figs, tabs, refs, CD

*Work undertaken by:* AC archaeology

The excavation aimed to clear the ground of human remains in advance of a proposed housing development whilst providing an osteological data set on a sample of the nineteenth century population. Although only a small percentage of the known inhumations at Gordon Terrace were recovered during this phase of archaeological works and only a few individuals could be positively identified the high potential for further analysis of the skeletal remains and possible further historical research, it was recommended that some further analysis of both the assemblage and historical records should be undertaken. Brigers, J Bridgwater : James L Brigers, 2006, 20pp, colour pls, figs, tabs, refs

*Work undertaken by:* James L Brigers

Archaeological monitoring was carried out during groundwork prior to the construction of a dwelling. Two shallow linear gullies were noted running approximately north-south, partially crossing the centre of the site. However, these remained undated due to the total absence of finds from their fills. At the west end of the site the remains of foundations of lias limestone walls were found defining the north-east corner of a building, probably part of that indicated on the 19th century maps. Elsewhere on the site, the complete skeletons of two pigs were found in separate pits. Finds associated with these indicated that their burial probably occurred in the mid-19th century. [Au(abr)]

Brigers, J Bridgwater : James L Brigers, 2006, 38pp, colour pls, figs, refs

*Work undertaken by:* James L Brigers

The excavation revealed a number of archaeological features, the earliest of which consisted of ditches of pre-conquest date either defining an individual plot or forming part of a more extensive field system. These were succeeded by early medieval boundary ditches on a different alignment associated with large pits and later a cluster of pits of post-medieval date. Evidence of prehistoric and Roman activity on the site was limited to a few scattered finds of Bronze and Iron Age pottery, a late Neolithic scraper and a large sherd of amphora, all of which occurring as residual material in otherwise Saxon or medieval contexts. The close proximity of industrial activity during the early medieval period was suggested by finds of raw material and by-products associated with metal working in two of the medieval features and fragments of possible quern or mill stones. The watching brief formed the second phase of an archaeological programme of works in mitigation of the development. The c.30m long pipe trench was located directly above the western wing of the Ilchester County Gaol as shown on the map of 1821. This part of the Gaol was demolished some time after 1846, the structural remains of which were revealed at a depth of 1.3m below the modern ground surface, and beneath deep Victorian demolition layers and subsequent make-up layers. River alluvial sediments were encountered. A small assemblage of artefacts, consisting of post-medieval and modern pottery, glass, metal, clay tobacco pipe and leather were also recovered from the watching brief. [Au(abr)]

Brigers, J Bridgwater : James L Brigers, 2006, 10pp, colour pls, figs, refs

*Work undertaken by:* James L Brigers

A watching brief revealed that the chalk bedrock was found to be overlain by a series of three layers of soil build-ups, the lowest of which was charcoal rich and, as indicated by the close proximity of habitation, probably dated to the 10th or 11th century, also suggested by associated pottery. The uppermost two layers also produced pottery of medieval date and appeared to be deliberate dumps of material forming the bank upon which the wall was built. The churchyard wall itself was probably of post-medieval date and had been repaired several times since. In the centre of the section a rectangular slot had been cut into the surface of the bank which contained the remains of a horizontal timber and pottery of 18th or 19th century date. [Au(abr)]

King, R Swindon : Foundations Archaeology, 2006, 20pp, figs, refs

*Work undertaken by:* Foundations Archaeology

The results of the archaeological work indicated that the earliest identified activity consisted of field boundary hedges of 13th century date. A number of 16th-17th century features in the form of ditches related to field or property boundaries were also present, along with a number of tree root scars and throws which were used as ad hoc rubbish pits, while the presence of ceramic building material indicated the presence of a structure in the near vicinity, possibly associated with pin making. A single large tree throw in the far west of the site contained finds of 18th-19th century date and suggested remodelling of the area during the later post-medieval period. A small number of stake holes were also identified, although it did not prove possible to attribute these to any structures or specific function. [Au(abr)]

Groundwork comprised the machine-excavation of six trial pits to depths in excess of 3m. In most of these an intact soil profile was present, comprising topsoil above an alluvial subsoil. No evidence for pre-modern archaeological activity was recorded within the trial pits and no finds were recovered. The work also revealed localised areas of modern disturbance. [Au(abr)]

 Ducker, R Bristol : Avon Archaeological Unit, 2006, 15pp, colour pls, figs, refs

*Work undertaken by:* Avon Archaeological Unit

During the watching brief, the deposits and structures recorded comprised modern made-up material overlying a number of earlier structures as well as modern footings for a former electricity substation. The earlier structures appeared to represent parts of four walls, a brick edged plinth and two cobbled surfaces. A stone built culvert was also recorded. It was possible that all of the above structures were related to the former Champion Brassworks, however, several appeared to form part of a small, possibly domestic, coal cellar suggesting a residential building rather than industrial origins. Passmore, A J Exeter : Exeter Archaeology, 2006, 6pp, figs, tabs, refs

*Work undertaken by:* Exeter Archaeology

During the watching brief, the earliest features exposed on the site were the well (7), and the possible associated surface (8). These features could not be directly dated, but had been constructed before the later 18th century. The main phase of activity dated to the period between c.1770 and 1840, when the ground on the eastern part of the site (which naturally sloped downhill) was raised up (5). Subsequently a building was constructed to the east, forming the boundary wall to the site. The northern part of the mid-19th century courtyard had a cobbled surface (3). When the range of buildings was constructed against the east boundary (sometime between 1865 and 1933) the north wall (which still forms the boundary of the site) was built over the earlier cobbled surface. Inside this building a new mortar surface (4) was laid over the cobbles. [Au(adp)]

Roberts, J Salisbury : Wessex Archaeology, 2006, 18pp, colour pls, figs, tabs, refs

*Work undertaken by:* Wessex Archaeology

The aim of the investigation was to fully characterise the remains of three large ring ditches. The preliminary results suggested that they were Bronze Age round barrows, with a Middle/Late Bronze Age trackway. A small Early Bronze Age cremation cemetery and a Middle Bronze Age crouched inhumation were also encountered, as well as several un-urned cremations clustered around the south-east "entrance", one of which contained early prehistoric pottery. [Au(adp)]
