Wainwright, J Clun : Marches Archaeology , 2006, 41pp, colour pls, figs, tabs, refs

*Work undertaken by:* Marches Archaeology

A programme of archaeological works uncovered archaeological deposits and features dating from before c.AD 1250. It was likely that other undated features probably dated from this period also. In the north-western part of the site, there was a concentration of post holes and although no coherent footprint for any structure was made out it was possible that a building or buildings existed here before c.AD 1250. The cess pits excavated in the south of the site must have been associated with dwellings, perhaps part of the manorial complex of the Burnell family. [Au(abr)]

*Work undertaken by:* Ironbridge Archaeology

The archaeological impact of the work was minimal. The first two holes excavated disturbed 20th century deposits which had been laid down when the site was opened to the public. The third hole disturbed an archaeological deposit, however, this was a rubble deposit of rubble from collapsed walls and no in situ structural remains were disturbed. The final two holes excavated were reused from the previous panels and therefore little new disturbance took place. [Au(adp)]

*Work undertaken by:* Archaeological Research Services

The archaeological investigation revealed the presence of a large ditch. This ditch had multiple fills and was possibly re-cut; a large quantity of animal remains from sheep, pig and cattle were found within the trench. Moreover, the trench afforded a large collection of pottery in addition to some slag from glass works and a single nail. A second, but very shallow, trench was found immediately next to the road towards the south-west corner of the investigation area. This trench seemed to have been truncated by the modern road, but still afforded pottery and animal bone. At the northern edge of the investigation area, three burials were encountered. The churchyard extended to the road and encompassed the property under investigation from 1795 until 1837 according to the cartographic evidence available. [Au(abr)]

Lane, A Lancaster : Oxford Archaeology North, 2006, 25pp, figs, tabs, refs

*Work undertaken by:* Oxford Archaeology North

Two distinct corridors, one to the west of the access track and one east, were subject to soil stripping. These groundworks revealed that the site had been subject to disturbance from the dumping of material from a colliery, to the south of the site. This had the effect of obscuring and damaging any evidence of surviving archaeological remains; therefore no significant archaeological remains were encountered during the course of the observations. The pottery fragments and glass bottles recovered dated from the nineteenth and twentieth centuries and dated the topsoil overlying the colliery overburden. [Au(abr)]

The watching brief identified modern and post-medieval overburden across the site. In trench 1, this material sealed a well-reserved medieval pit containing pottery dating to the 12th-13th centuries. The full extent of the pit could not be ascertained within the confines of the trench, but it was apparent that it was a substantial feature. The nature of the secondary feature fill suggested that the pit had been back-filled soon after it was originally excavated. The state of the preservation of the pit and cartographic evidence suggested that other medieval features may survive at similar depths. [Au(abr)]

*Work undertaken by:* Border Archaeology

The archaeological observation revealed evidence of post-medieval archaeological features consisting of a brick-lined well and the foundation of a building orientated roughly north-south and a small quantity of associated late post-medieval pottery. Both of these features were probably of late 18th/19th century date and associated with workers' housing provided for the employees of the Phillips tape waving factory located to the south of the site. An evaluation was extended to an excavation when archaeological remains were discovered. The structural remains of three pottery ovens were discovered in Trench 3/4 all of which were up-draughts built during the mid-late 19th and early 20th centuries. An additional 20th century oven was located in Trench 1. The fragmentary remains of four through-terrace houses were identified in Trench 2, surviving only as cellar bases. [Au(abr)]

*Work undertaken by:* Ironbridge Archaeology

The new route of the electricity cable trench resulted in minimal impact on archaeological remains taking place. The only deposits disturbed were from tipping or made ground, with no archaeological features exposed in the excavations. In addition, the footpath upgrade to the two areas of plateway was monitored and no disturbance to the archaeological features occurred. The exposed brickwork was covered providing it with protection during the course of the upgrade work. All of the artefacts found were out of situ and came from the topsoil layer, probably all dating from the late 19th century. [Au(adp)]

A metal detector survey within the Registered Civil War Battlefield of Edgehill recovered a scatter of finds dating from the 17th to the 20th century. A small buckle was the only object thought to be associated with the battle. The rest of the objects found appeared to consist of the usual general background scatter found in many fields. The most unusual of these was a large 17th century medal depicting King Charles XI of Sweden and his queen Ulrika Eleonora. [Au(adp)]

Ramsey, E      Birmingham : Birmingham Archaeology, 2006, 13pp, colour pls, figs, refs

*Work undertaken by:* Birmingham Archaeology

The watching brief monitored the excavation of a service location trench through the earth bank and car park to the north-east of Snow Hill Station. The archaeological investigations established that the area had been substantially truncated by the construction of large foundation walls, floor surfaces, and service trenches, probably associated with the former Snow Hill Station, which had been demolished

and replaced in the 1980s. Part of an earlier wall was identified that was possibly associated with the early glassworks, although it was heavily truncated, and not associated with any other features or structures, little could be inferred from its presence within the site. [Au(abr)]

Mann, P & Litherland, S Birmingham : Birmingham Archaeology , 2006, 9pp, figs, refs

*Work undertaken by:* Birmingham Archaeology

An archaeological watching brief was carried out at Aston Hall. Two trenches and two test pits were excavated. Excavation revealed that the wall of the privy gardens had been modified on several occasions. The lower brick courses of the original wall footing were laid in English Garden Wall bond and were built from sandstone foundations. This design was similar to that of the hall and parts of the northern service range that had been investigated previously. Subsequently the wall was underpinned and strengthened with concrete foundations. [Au(adp)]

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

A watching brief was carried out and recovered important evidence of Bronze Age activity in the form of a pit dated to 1730-1500 BC. The pit included residual material from an earlier phase of activity around 2000 BC. Evidence of Roman and medieval or post-medieval agriculture was also found in the form of artefacts deposited with farmyard manure. A medieval pond, evidence of the expansion of Northfield after c1800 and the remains of a building in an enclosure laid out behind the street frontage, were recorded. A well was found near the site of a house on the west side of Bell Hill, and other foundations of 19th and 20th century were also recorded. [Au(adp)]

**LONGDALES ROAD, KINGS NORTON**

*Longdales Road, Kings Norton, Birmingham - 2006 Excavations, Post-Excavation Assessment*

Burrows, B Birmingham : Birmingham Archaeology, 2007, 33pp, figs, tabs, refs

*Work undertaken by:* Birmingham Archaeology

Two areas were excavated in 2006, one immediately adjoining the Icknield Street road frontage. The earliest activity probably comprised the layout of ditched plot boundaries at right-angles to the Roman road. The plot boundaries were further defined by metalled roads adjoining the ditched boundaries. The excavated part of the Plot A road frontage comprised a metalled surface, possibly used as a hardstanding for storage, which was not continued along the frontage area of the other excavated plots to the north. Plot B contained a rectangular ditched enclosure within which was sited part of a ring gully. Plot C also contained a ring-gully, which may have been in use in late Phase 1-early Phase 2. Phase 2 activity was in general more limited. The main Phase 2 feature was the north-eastern angle of a ditched enclosure, cut through the two Phase 1 road surfaces in Plot A. This enclosure was associated with an east-west aligned ditch. Further to the north, the only Phase 2 feature was a large pit. With the exception of the Phase 1 Plot B enclosure, activity was concentrated away from the road frontage, most notably in Phase 2. The material recovered included Severn Valley ware jars and bowls, a Malvernian tubby cooking pot, and Black Burnished ware and Severn Valley jars and tankards, and mortaria from Oxfordshire and Mancetter Hartshill. *Work undertaken by:* Mike Napthan Archaeology

The works, carried out in the historic core of the city, discovered two almost certainly prehistoric pits and a single Iron Age feature. The survival of these on such a disturbed site was though quite remarkable. Late Iron Age artefacts, one possibly related to salt production, were encountered. Other pottery and flint tools were also recovered. Roman material at the site formed the vast majority of the assemblage. Most of this came from post-medieval contexts, however, there was at least one post hole attributed to the Roman period. Later pottery was sparse. Medieval and post-medieval activity consisted of negative extraction features. [Au(adp)]

*Archaeological Watching Brief at 7 Broadway Road, Childswickham, Worcestershire*

Vaughan, T Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2006, 11pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service  
No significant archaeological remains were identified nor were any residual finds predating the modern period recovered from the site. This would appear to indicate that neither the Roman activity identified adjacent to the north-west, nor the medieval settlement, centred on the church to the south, extended into this area of the modern village. Cook, M Worcester : Worcestershire County Council Historic Environment &amp; Archaeology Service, 2006, 22pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

The building recording suggested that the barn at Church Farm was probably late 18th or early 19th century in date. The granary and cartshed were mid to late 19th century. The loss of the building forming most of the original eastern end of the rectangular yard made the overall context of the remaining buildings difficult to interpret. The watching brief located the remains of further buildings, particularly in trench 2 where brick and stone and a post hole construction were all evident. [Au(adp)]

Milward, J Worcester : Worcestershire County Council Historic Environment &amp; Archaeology Service, 2006, 37pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

An archaeological excavation and watching brief was undertaken. Evidence for late medieval domestic activity in the form of refuse pit excavation was recorded as well as the remains of a 17th century building, which probably houses animals or serves an industrial purpose. This structure was demolished not long after its construction and its masonry robbed out with the exception of a stretch of dwarf wall at the north-west corner of the building. A small amount of renewed pit and well digging then took place on the site in the 18th century before the plot was terraced in the late 19th century. [Au(abr)]

Vaughan, T Worcester : Worcestershire County Council Historic Environment &amp; Archaeology Service, 2006, 14pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

An archaeological watching brief was undertaken at Pershore Abbey. A hand-dug test pit was monitored at the corner of the early 13th century St. Johns Chapel. This revealed four inhumations with associated disarticulated bone, the concreted sandstone rubble foundation course of the chapel and further foundation for a possible buttress or adjacent structure. Two of the burials pre-dated the chapel foundations and one appeared to post-date the discrete foundation course. No dateable artefacts were recovered during the investigation, and all human bone was retained on the site either for immediate reburial in situ or reinternment at the end of works. No osteological analysis was undertaken although all the identified individuals appeared to be adults. [Au(abr)]

Miller, D Worcester : Worcestershire County Council Historic Environment &amp; Archaeology Service, 2006, 14pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

Four trenches associated with the flood alleviation works were observed and recorded. All four trenches showed sequences of made ground over alluvium. The made ground and upper alluvial deposits were clearly modern, although the latter contained residual artefacts of post-medieval date. These suggested rubbish disposal by travellers using an earlier bridge. [Au(abr)]

Vaughan, T &amp; Rogers, T Worcester : Worcestershire County Council Historic Environment &amp; Archaeology Service, 2006, 16pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

A watching brief was carried out during repairs to suspended timber floors within the nave, and the ground level in three areas. A modern layer containing brick and mortar lay directly beneath the surface. A small quantity of human bone was identified within this context but was disarticulated and did not represent a burial. In the second phase of the watching brief in January 2006, a stone built structure was observed. It was suggested that it may have been the wall of a vault of the foundation of an earlier layout of the church itself. A single fragment of shaped red sandstone was recorded projecting from the section at the base of the trench. [Au(abr)]

Miller, D Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2006, 48pp, colour pls, figs, tabs, refs

*Work undertaken by:* Worcestershire County Council Historic Environment & Archaeology Service

The quay wall was identified as a composite structure of 17th to 20th century date, also incorporating the first pier of Bewdley's third medieval bridge, built in 1483. The abutment of this bridge was located and recorded, as were parts of contemporary and later quay wall, and the remains of several 18th century buildings. The timber structure in the riverbed was dated to the late 16th to 17th century and interpreted as a jetty. A small, but broadly representative, assemblage of artefacts also recovered from later deposits. [Au(abr)]

Examination of a feature discovered on site was limited, but clear views from the south and east were possible from a public road and a path. The profile permitted the viewer to imagine either a barrow or motte but until adequate geophysical surveys and/or excavation had been carried out the problem was regarded as unsolved. [Au(adp)]
