Londesborough Park Sewer Improvements, East Riding of Yorkshire. Archaeological Earthwork Survey and Scheme of Observation, Investigation And Recording

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2006, 14pp, colour pls, figs, refs

Work undertaken by: Northern Archaeological Associates

The archaeological earthwork survey recorded a number of features relating to medieval agricultural activity and the post-medieval landscaped park. Ridge and furrow earthworks were recorded over much of the study area and the remains of a tree lined hollow way and ornamental pond were identified. Monitoring of topsoil stripping revealed further traces of medieval ridge and furrow field systems and the remains of an undated, compacted gravel pathway that may have formed part of the designed landscape of Londesborough Park. Fieldwork and Excavations near Thwing, East Yorks 2006

Ferraby, R, Johnson, P & Millett, M York : Yorkshire Archaeological Society, 2007, 3pp, figs

Work undertaken by: Yorkshire Archaeological Society

A ladder complex found by magnetometry was shown to post-date the major dyke system which runs along the ridge to the south of the excavation. In the excavation trench, a rubble concentration was cut by two pits, apparently associated with the robbing of the building. Elsewhere, the clearing of the rubble revealed *in situ* walling especially at the eastern end of the trench. Investigation of the interior of the building was limited to two areas, one at the north and the second abutting the east side about a quarter of the way along the building. [Au(adp)]

Archaeological Observation, Investigation and Recording at Wilberforce House, High Street, Hull

Rawson, D P Hull : Humber Field Archaeology, 2006, 34pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

An area was excavated that exposed a brick surface, possibly a "half-cellar" floor laid when the property was redeveloped in the 1660s. Below this was a substantial wall foundation which may have

been part of Sir John Lister's late 16th century house, the predecessor of the building. A barrel-vaulted brick culvert, probably of late 18th or early 19th century date was also located. [Au(adp)]

ACCESS ROAD, BROUGHTON FOREST PINES GOLF CLUB, BROUGHTON

Access Road, Broughton Forest Pines Golf Club, Broughton, North Lincolnshire. Archaeological Watching Brief

Rowlandson, I Lincoln : Lindsey Archaeological Services, 2006, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Lindsey Archaeological Services

Excavation of a temporary access road leading to a contractors company at the Broughton Forest Pines Golf Club revealed a wood bank and ditch along the western edge of the B1207. The presence of modern services and an asphalt footpath prevented the recording of a full profile. A sherd of modern ceramic drain and modern pottery were retrieved from the upper ditch fill. It was likely that the ditch was along the line of a Roman roadside ditch and the subsequent woodland boundary. [Au(adp)]

figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

The works comprised the excavation of footprint of the southern and eastern wings of the proposed new building. Seven pieces of flint and one piece of chert were uncovered. A large ditch was uncovered in the south-west corner of the site. A piece of Roman pottery and a piece of lava quern were recovered from the fill. A number of linear features were present across the site. A small assemblage of medieval pottery was recovered from two of these. [Au(abr)]

Work undertaken by: Northern Archaeological Associates

A watching brief was carried out during the consolidation and reconstruction of three sections of boundary wall within the boundary of the Scheduled Ancient Monument of Jervaulx Cistercian Abbey. Twenty construction stones were found and recorded. A fragment of roll moulding was found within the wall boundaries indicating that the wall post-dated the monastic precinct. The same footings were used for the roadways suggesting that they may have been constructed at the same time. The road had undergone at least two phases of modern rebuild. [Au(adp)]

Adams, J Durham : University of Durham, Archaeological Services, 2006, 24pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

The outbuildings complex includes a Listed barn, building B. There were no other historic statutorily protected buildings in the vicinity of the site. All of the structures on the site were of 19th and 20th century date. A pit found below the floor of the barn building dated to the 16th-18th century and probably predated the building. At least two phases of alterations to the farmhouse were noted; there had been a change to the height of the buildings, and chimney stacks had been altered. Two finds were removed from wall cavities in the farmhouse and the outbuildings, all dating to the 19th century. [Au(abr)]

STURDY SPRING BURNT MOUNT, FELDOM RANGE, RICHMOND

Sturdy Spring Burnt Mount, Feldom Range, Richmond, North Yorkshire - Archaeological Excavation

Mole, J Durham : University of Durham, Archaeological Services, 2006, 27pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

An archaeological excavation was made of a mound, one of three, approximately 15m in diameter and 1.5m deep with a shallow depression in its centre. Excavation of this mound uncovered a hearth and large quantities of burnt sandstone indicative of repeated episodes of firing. The primary fill of the through was submitted for lipid analysis in order to identify the presence of plant or animal residue left over from cooking activities. This analysis found no evidence for the use for cooking. Charcoal from the hearth was radiocarbon dated to 1430-1260BC at three sigma confidence was returned placing the final use of this hearth in the Middle Bronze Age. This date was substantially later than that attained for

mound three and may have indicated a chronologically linear sequence to the Sturdy Spring mounds, or that the sites were in use for a substantial period of time. [Au(adp)]

Dennison, E Beverley : Ed Dennison Archaeological Services Ltd, 2007, 15pp, colour pls, figs, refs

Work undertaken by: Ed Dennison Archaeological Services Ltd.

An archaeological watching brief was carried out at St. Peter and St. Paul's Church. Foundations underlying the south wall of the chancel and the west wall of the south chapel were seen in the two excavated trenches. These foundations had a slightly different alignment to the walls above and it was possible that they represented the remains of an earlier structure. The south chancel wall and the priest's door were associated with a wider rebuilding of this end of the church in the 14th century, while the south chapel was built in the 15th century and it was known that there was an earlier structure on site. Wood, S M P Scarborough : Scarborough Archaeological and Historical Society, 2006, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Scarborough Archaeological and Historical Society

The brief provided important information on the 19th century construction of the museum. The monitoring found that any earlier archaeology which may have existed was destroyed during the erection of the museum in the 1820s and its wing extensions in the 1860s. No important archaeology was affected by the current works. [Au(adp)]

Archaeological watching brief at The Old Vicarage Gardens, Finkle Street, Hemingbrough, North Yorkshire

Field Archaeology Specialists Ltd. York : Field Archaeology Specialists Ltd, 2006, 7pp, figs, tabs, refs

Work undertaken by: Field Archaeology Specialists Ltd.

An archaeological watching brief was carried out at The Old Vicarage Gardens, Finkle Street, Hemingbrough. The deposits encountered within this series of groundworks appeared to represent the thick accumulation as a dark soil overburden a possible relict buried ground surface overlying possible subsoil. This sequence was interrupted only by the construction of the drainage system. The source of the residual Roman ceramic from C1000 was not clear, but they can be grouped with the scattered Roman finds recorded from the Hemingbrough area. [Au]

Fern, C Slingsby : Fern Archaeology, 2006, 31pp, colour pls, figs, tabs, refs

Work undertaken by: Fern Archaeology

A watching brief revealed evidence for an substantial ditch running on a north to south alignment and the backfill produced medieval pottery of 11th to 14th century date. Given the proximity of St.Helen's Church it was likely that it was associated with the history of this building and was possibly a section of the surrounding ditch (fossa) contemporary with the late Anglo-Saxon or early Norman phases of architecture. A Roman coin from the reign of Emperor Hadrian was also found. [Au(adp)]

Report on the archaeological watching brief off Old London Road, Towton, North Yorkshire

Fern, C Slingsby : Fern archaeology, 2006, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Fern Archaeology

The watching brief found a footprint of a small building with surviving evidence for a dry stone wall construction, post pads and a laid clay floor. Associated medieval pottery was found dating the building to the late 12th century to 15th century. In the late 15th century there was evidence for iron smithing on the site, such as metal working waste which backfilled the furnace. A ditch of uncertain age was also found and post-medieval features included a dog burial. Metal detecting on site recovered several finds, such as a counterfeit half guinea of George III, the pin of a medieval annular brooch and a lead spindle whorl of possible 8th-10th century date. CENTRAL RIVERSIDE, BLONK STREET, SHEFFIELD

Archaeological Assessment Report on Excavations at Central Riverside, Blonk Street, Sheffield

Davies, G & McCoy, M Sheffield : ARCUS, 2006, 53pp, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological desk-based assessment and trial trenching were conducted as part of a planning condition of a development. Two areas were excavated and a watching brief was carried out on the grubbing out of pile locations. In area one, the excavation investigated the remains of the 19th century culverting and fragmentary remains of an adjacent 18th to 19th century building. In area two, the remains of the Clyde steelworks were recovered with four main phases of construction, including a large machine base, a boiler base, a chimney and flues and a later 20th century concrete cellar. A watching brief on pilling identified extensive 19th and 20th century cellars over much of the site. [Au(adp)]

EYRE STREET, SHEFFIELD

An Archaeological Watching Brief at Eyre Street, Sheffield, South Yorkshire

Klempere, M & May, R Sheffield : ARCUS, 2006, 30pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological watching brief was carried out at the site. Stone and brick walls and probable floors were uncovered, and were likely to have been associated with cellars of the former structures on the site. These included early to mid 19th century housing and small metal trades works, demolished in the 1930s. In the mid 1940s a factory was built and the external wall has now formed the boundary of the car park. The factory was demolished in 1995-2001. Two sandstone grinding stones were uncovered. The survival of walls and floor layers indicated that substantial subsurface remains of the 19th century buildings survived across the site. [Au(adp)]

Bruce, G York : On Site Archaeology, 2006, 7pp, colour pls, figs, tabs, refs
Work undertaken by: On Site Archaeology
A strip and record exercise was carried out at Barrowby Hall. One trench was monitored for the proposed access road, due to a planning condition. Two linear features were recorded which were thought to be remnants of a ridge and furrow field system, which had been previously identified by aerial photography. Pottery recovered suggested that the ridge and furrow system was still in use in the mid-17th century and possibly 18th century. [Au(adp)]

DARRINGTON TO DISHFORTH A1(M) DBFO PROJECT, FERRYBRIDGE-HOOK MOOR SECTION
Darrington to Dishforth A1 (M) DBFO Project, Ferrybridge-Hook Moor Section - Site R, Castle Hills, Archaeological Excavation
Clark, P & Hughes, V Lancaster : Oxford Archaeology North, 2006, 56pp, colour pls, figs, tabs, refs
Work undertaken by: Oxford Archaeology North
Between 2003 and 2006 the A1 between Darrington to Dishforth in Yorkshire was upgraded to motorway status. Two sections were newly built, the route of Ferrybridge to Hook Moor section, which

passed from West Yorkshire into North Yorkshire, and then back into West Yorkshire and a Wetherby to Walshford. An excavation was undertaken at Site R and revealed substantial ditches, possibly an enclosure, some of which dated to the Iron Age period. Some Romano-British pottery was recovered. Evidence suggested that there was a permanent enclosed settlement. [Au(adp)]

ST MARY'S STREET, LEEDS

St Mary's Street, Leeds, West Yorkshire - Archaeological Watching Brief

Martin, L Morley : Archaeological Services WYAS, 2006, 32pp, colour pls, figs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological watching brief was carried out during the groundwork associated with the construction of an extension to the diocese of Ripon and Leeds offices. Prior to demolition in 1979 an early 19th century church had occupied the site. The excavations uncovered the well-preserved partial foundations of this church, which corresponded to early plans. Little evidence of a graveyard or associated burials was uncovered. A demolition deposit was noted across the site and may have concealed any surviving archaeological features and burials at greater depths. [Au(adp)]

Work undertaken by: University of Durham, Archaeological Services

Archaeological monitoring was carried out during the excavation of 77 geotechnical test pits. These revealed information about the original topography of the site, and several horizons of peat were identified. It was recommended that further archaeological investigation be undertaken across the central and eastern portions of the site. However, the far western area, and much of the southern boundary, was considered to be archaeologically sterile. Therefore, it was not recommended that any further work need be undertaken in these areas. [Au(adp)]
