LANGLEY PARK SCHOOL FOR BOYS, HAWKSBROOK LANE, BECKENHAM***Archaeological Evaluation Report: Fluxgate Gradiometer Survey at Langley Park School for Boys, Hawksbrook Lane, Beckenham, London Borough of Bromley***

Hibbett, D & Allen, M Branston : Allen Archaeological Associates, Report: 2008/055 2008, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Allen Archaeological Associates, Grid Nine Geophysics

A geophysical survey was undertaken on land at the Langley Park School for Boys. The site was being used as a sports field for the school. Existing sports equipment [e.g. Rugby goalposts], service/drain covers and boundaries caused some distortion to the dataset, however, the survey revealed a number of anomalies, the majority of which could be attributed to known boundaries and features, as shown on historical maps and aerial photographs. These included a former track, the remains of a demolished nursery, and former boundaries. Two curvilinear anomalies may have been of archaeological significance as they did not appear on any known mapping and did not conform to existing or known former boundaries. There were many dipolar responses which were likely to have been caused by modern ferrous detritus. [Au(abr)]

Work undertaken by: GSB Prospection

Within Lincoln's Inn Fields both the magnetic and GPR data showed remnants of World War II air raid shelters. Potential former garden features were identified within the North Garden, while survey within the Courtyard and Herb Garden revealed anomalies of uncertain origin. [Au(abr)]

A magnetic susceptibility survey was successful in identifying areas of magnetic enhancement. Two areas were then targeted with detailed magnetic survey. The detailed survey identified a limited level of archaeological activity. The main evidence for past human activity related to former enclosure boundaries that matched well with enhancement seen in the magnetic susceptibility data. [Au(abr)]

RUISLIP MANOR FARM

Geophysical Survey Report: Ruislip Manor Farm, Middlesex

Elks, D Upton-upon-Severn : Stratascan, Report: J 1960 2005, 31pp, figs, refs

Work undertaken by: Stratascan

Geophysical surveys were carried out at Ruislip Manor Farm. A resistance survey of grassed area, and a ground penetrating radar survey of road, both within a Scheduled Ancient Monument. The survey defined anomalies in the area surrounding the house and the motte which suggested the presence of buried structural remains. Some linear anomalies appeared to be orthogonal with the manor house indicating they may be from a similar period of construction. Other linear anomalies were identified on a different orientation suggesting they are from an unrelated building phase. The northern extent of the bailey was defined with enclosing earthworks and a section of infilled moat was also located. Anomalies in the motte identified cut features that may relate to the location of former buildings. [Au(abr)]

AMERICAN GARDEN, OSTERLEY PARK

Geophysics Survey of the American Garden, Osterley Park

Marshall, G Swindon : National Trust, 2008, 1p

Work undertaken by: National Trust

A resistivity survey of the American Garden at Osterley was carried out. The survey was undertaken to try and locate a complex of zig zag paths shown on the 1832 estate plan. [Sec(abr)]

The survey did not reveal any anomalies that could be attributed to a Roman road, as was expected at the site. The gradiometer data was affected by ferrous objects such as pipes and fences. [Au(adp)]
