Carlyle, S Northampton : Northamptonshire Archaeology, 2004, 205pp, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

A trial trenching evaluation was carried out along the route of a proposed bypass. Twelve key areas of archaeological interest were identified. The sites represented farming settlement and associated activity dating from the the Early/Middle Iron Age to the medieval period. Between these areas, remains dating from the Late Bronze Age/Early Iron Age relating to field boundaries, drainage ditches and plough furrows were identified. [Au(abr)]

Medieval Ditches at the New Vicarage, 2 Fulbourn Old Drift, Cherry Hinton, Cambridge: An Archaeological Excavation

Fletcher, T Fulbourn : Archaeological Field Unit, Cambridgeshire County Council, 2005, 31pp, figs, tabs, refs

Work undertaken by: Archaeological Field Unit, Cambridgeshire County Council

The evaluation consisted of an 'L-shaped' trench mechanically excavated, in advance of a proposed new parsonage. The evaluation followed on from previous excavations of the site and revealed four phases of archaeology, two of which were medieval and post-medieval. Features included: ditches, post holes, pits, a well, a possible enclosure and a small assemblage of 12th to 14th century pottery. These features represented the back plots of enclosed areas which may have fronted onto the High Street. [AIP]

LAND NORTH OF THE BROOK, SUTTON***An Iron Age and Roman Settlement on Land North of the Brook, Sutton, Cambridgeshire***

Atkins, R Fulbourn : Archaeological Field Unit, Cambridgeshire County Council, 2004, 43pp, figs, tabs, refs

Work undertaken by: Archaeological Field Unit, Cambridgeshire County Council

Evaluation trenches were excavated on a site. The eastern edge of a Iron Age/Romano British settlement was identified. A large sub-rectangular watering hole, with a small water channel running into it and a post hole possibly used in part of a mechanism to collect water were recorded. The feature was backfilled in one event, using material from elsewhere in the settlement. Middle Iron Age and Romano-British material was recovered. [Au(abr)]

LAND REAR OF 1-8 ANNESDALE, ELY***Land Rear of 1-8 Annesdale (Riverside Boatyard), Ely, Cambridgeshire. An Archaeological Evaluation***

Grant, J & Doyle, K Hertford : Archaeological Solutions, 2004, 29pp, pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The desk-based assessment and evaluation were carried out in advance of a proposed single dwelling construction. The desk-based assessment revealed evidence for extensive Saxon-medieval remains in the general vicinity of the study area. Lying in Fenland, attempts were made to reclaim land in Ely from the 13th century. The evaluation revealed few finds and only one archaeological feature, a ditch thought to have represented an 18th/19th century plot boundary. Alluvial and peat deposits were present in the lower part of the stratigraphic sequence. Above these were dumped layers, probably deposited to create a dry consolidated surface, the deposition of these layers began earlier (13th to 16th century), further away from the river. [Au(adp)]

48 Newtown Road, Ramsey, Huntingdon, Cambridgeshire. An Archaeological Desk-based Assessment and Trial Trench Evaluation

Grant, J, Williams, J & Williamson, I Hertford : Archaeological Solutions, 2004, 20pp, pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The desk-based assessment and resulting evaluation was carried out in advance of a proposed residential development. The desk-based assessment concluded that the site had not been developed until the early 20th century and was peripheral to the medieval core. The field evaluation consisting of five trenches, revealed two layers of peat overlying the natural boulder clay. A post-medieval alluvial layer was also recorded, which was likely to have been caused by waterlogging. Despite the potential for medieval activity on the site, no archaeological features or finds were located within the trenches. [Au(adp)]

Land at High Street, Hilton, Cambridgeshire. An Archaeological Desk-based Assessment and Evaluation

Grant, J, Williams, J & Crank, N Hertford : Archaeological Solutions, 2004, 29pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The desk-based assessment and field evaluation were carried out in advance of a proposed residential development. The desk-based assessment revealed that the region had produced evidence of activity dating back to the Neolithic period, although the village itself was probably not occupied until the late Anglo-Saxon period. Probable Romano-British and Iron Age crop mark sites were also identified in the area around Hinton. The evaluation consisted of four trenches and revealed evidence of a medieval ridge and furrow field system, an Iron Age ditch contained abraded pottery and an undated post hole was also identified. Land West of Ermine Street, Huntingdon, Cambridgeshire: Archaeological Evaluation

Cullen, K Cirencester : Cotswold Archaeology, 2004, 57pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

135 trenches were excavated. Four zones were highlighted that indicated high concentrations of features associated with two occupation phases, the Late Bronze Age and Roman, indeed archaeological features were present throughout the site except for the north. The Bronze Age phase of occupation appeared to be focused on stock management, as represented by linear features, although post holes and pits in the central part of the site suggested outlying activity. The Roman period appeared to be represented by a several phases of enclosure ditches and field systems. [Au(adp)]

NORTHBRIDGE HUNTINGDON*Northbridge, Huntingdon, Cambridgeshire*

Cullen, M Cirencester : Cotswold Archaeology, 2004, 54pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

One hundred and thirty-five trial trenches were targeted on features identified by a geophysical survey, on the proposed development site. Bronze Age features were identified comprising of linear features, possibly used for stock management, an area of Bronze Age occupation, in the form of post holes and pits. A further possible Late Bronze Age settlement was also identified in the south western part of the site, where a series of curvilinear gullies and a ring ditch identified in the geophysical survey were encountered. Roman ditch field systems and enclosures were also identified. [Au(abr)]

PROPOSED NEW BURIAL GROUND, SOMERSHAM*Proposed New Burial Ground, Somersham, Cambridgeshire. An Archaeological Evaluation*

Grant, J & Williams, J Hertford : Archaeological Solutions, 2004, 26pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation comprised two trenches, excavated in advance of a proposed extension to the nearby burial ground associated with the medieval church. The evaluation revealed a large undated pit, a post-medieval ditch, an undated gully, as well as Roman and post-medieval pottery and butchered animal bone. A slight bank was also observed in the centre of the site, separating the lower ground from the higher ground. A large pond feature was also recorded in the south of the site, which appeared to have been deliberately backfilled in the Victorian era, but was likely to have been associated with the medieval Bishop's Palace to the south (SAM 199). THE RHEE LAKESIDE INVESTIGATIONS*The Rhee Lakeside Investigations. An Archaeological Evaluation at Hanson Quarry, Coln Fen, Earith*

Patten, R Cambridge : Cambridge Archaeological Unit, 2004, 58pp, figs, tabs, refs

Work undertaken by: Cambridge Archaeological Unit

Thirty-six evaluation trenches were excavated to target cropmarks and features identified in a geophysical survey, as well as to identify natural features in the Rhee lake. Features identified consisted of: Neolithic pits, a Bronze Age settlement comprising of post holes, curvilinear gullies, ditches and a field system, an Iron Age ditched enclosure and a Roman field system. The Rhee Lake area produced evidence for a palaeochannel and a later system of channels, cutting through peat inundations. [Au(abr)]

CAMBOURNE NEW SETTLEMENT***Cambourne New Settlement, Cambridgeshire. Archaeological Evaluation at Hodgkinson Land***

Wakeham, G Salisbury : Wessex Archaeology, 2005, 9pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

A trenched excavation was undertaken in advance of a proposed housing development. Only one archaeological feature was identified, a single undated and badly truncated ditch/gully in the north-east of the site. The results from this evaluation were consistent with those from a previous archaeological evaluation in 2001, when no significant archaeological remains were uncovered. The area therefore was interpreted as having a low archaeological potential. [Au(adp)]

LONGSTANTON, CAMBRIDGESHIRE

Longstanton, Cambridgeshire. A Village Hinterland

Evans, C & Mackay, D Cambridge : Cambridge Archaeological Unit, 2004, 240pp, figs, tabs, refs
Work undertaken by: Cambridge Archaeological Unit

An archaeological evaluation was carried out on the proposed development area. The study area consisted of 493 hectares and was evaluated using fieldwalking, geophysical surveying and trial trenching. Very limited evidence for pre-Iron Age occupation was identified, with only a limited scatter of finds and two possible Bronze Age occupation sites, identified from cropmarks outside the development area. The most prolific period of activity in the study area was in the Iron Age. Fourteen sites were identified, although only eight of these were confirmed by trial trenches, the rest were assigned by morphology. The sites comprised settlements, enclosures and field systems. Four major Romano-British settlements were investigated, along with associated field systems. Very limited occupation finds and features were identified in the area from the Saxon and medieval periods. [Au(abr)]

LAND AT TAKELEY STREET, TAKELEY

Land at Takeley Street, Takeley, Essex. Archaeological Evaluation and Potential Excavation

Williams, J & Thompson, P Hertford : Archaeological Solutions, 2004, 11pp, figs, refs

Work undertaken by: Archaeological Solutions

The evaluation consisted of three trial trenches excavated in advance of a proposal to build three detached dwellings on the site. The site was located along the northern side of the A120 Stane Street, which formed part of the course of the old Roman Road from Braughing to Colchester. The trial trenches revealed few archaeological features. Brick and pebble surfaces of probable 19th/20th century date were recorded in the south-eastern corner of the site. They were likely to have been used as the access route to a barn which previously occupied the north-east corner of the site. [Au(adp)]

Grassam, A & Williamson, I Hertford : Archaeological Solutions, 2004, 24pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation was a continuation of previous excavations carried out on this site in 1994. Previous archaeology included late Neolithic to Late Bronze Age pottery and struck flint. A large sunken pit was also previously identified which was associated with other pits, one of which contained a near complete Beaker pot, possibly a votive offering. In total 47 features were identified (compared to 57 in 1994) including ditches and gullies. A flint axe was also recovered from the bottom of a ditch. [AIP]

17-19 SCHOOL LANE, WELWYN***17-19 School Lane, Welwyn, Hertfordshire. An Archaeological Excavation Interim Report***

Williams, J & Thompson, P Hertford : Archaeological Solutions, 2004, 24pp, pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The open area excavation followed a desk-based assessment and field evaluation on the site. The results showed that there was good survival of Roman remains. Out of 18 features excavated, seven were definitely Roman and three were possibly from this period. Features included a section of ditch aligned north-east, south-west, three intercutting pits indicated subsequent use over time, a post hole, a small burnt layer which contained charcoal and building material and contemporary pottery. The animal bone assemblage although poorly preserved, suggested it was a result of Roman butchery and cooking waste. The evidence suggested a relatively concentrated period of activity in that part of the site between the early and mid 2nd century (c.100-160AD) [AIP]

Evaluation trenches were excavated on a proposed quarry extension site. Four zones of archaeology were identified. Zone One consisted of pits, gullies and structural remains (post holes, stake holes) dating to the Late Iron Age. Zone Two comprised of enclosure ditches, pits and post holes of a possible prehistoric date. Zone Three consisted of Early Iron Age pitting and Late Iron Age/Roman pitting and a hearth. Zone Four consisted of early medieval, medieval and post-medieval pits, post holes, ditches, gullies and possible structures. [Au(abr)]

An Archaeological Evaluation at 30 Bridge Street, Thetford

Shelley, A Norwich : Norfolk Archaeological Unit
, 2004, 61pp, colour pls, figs, tabs, refs
Work undertaken by: Norfolk Archaeological Unit

Four trenches revealed deep archaeological remains dating from the 10th and 11th centuries. Although there were few traces of domestic buildings, the number of refuse-filled pits uncovered indicated that domestic settlement had lain close by. This settlement co-existed with metalworking on the site, an activity evidenced by large quantities of ash and slag. All activity appears to have ceased by the 12th century, when a blanket of topsoil was either strewn or built-up across the site. This material contained a number of high-quality finds including a glass inlaid pewter brooch of 10th century date and a Viking arrowhead. Moreover, although a Dominican friary precinct was known to have been located close-by, sparse evidence of ecclesiastical activity was recorded, suggesting that the southern curtilage of friary lay to the north of the site. LAND ADJACENT TO RUSHFORD CHURCH, BRETtenham

An Archaeological Evaluation at Land Adjacent to Rushford Church, Brettenham, Norfolk

Davies, G Norwich : Norfolk Archaeological Unit

, 2004, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

An archaeological evaluation recorded the presence of settlement related features. Towards the northern extent of the site, a north to south aligned probable Late Saxon field or plot boundary ditch was flanked at its western extent by at least three undated post holes, one of which was cut by a later pit. The ditch and post holes ran at right angles to an existing track implying, at the latest, a medieval date for this feature. Residual Middle Saxon pottery was also retrieved within these features. The ditch, pit and post holes were sealed by a buried subsoil layer that contained animal bone and medieval pottery, some of which dated to later in the medieval period. It is suggested that the pattern of land use at the northern extent of the site changed at some point during the medieval period. [Au(abr)]

LAND TO THE NORTH OF ABBEY BARNS, MONKSGATE, THETFORD

Land to the North of Abbey Barns, Monksgate, Thetford, Norfolk. An Archaeological Evaluation

Crank, N & Grant, J Hertford : Archaeological Solutions, 2004, 15pp, figs, refs

Work undertaken by: Archaeological Solutions

The evaluation comprised two trial trenches and was carried out in advance of a proposed redevelopment of the site for residential use. The site lay within the north-western corner of the Thetford Priory complex. A single pit of probable medieval date was identified and was probably used for localised mineral extraction. A large sherd of residual, possibly prehistoric pottery was recovered from the pit in addition to brick and tile. In Trench 1, a 20th century levelling layer sealed the natural chalk. A single residual medieval pottery sherd was recovered from the subsoil. [Au(adp)]

ST. MICHAEL'S HOSPITAL, AYLSHAM*An Archaeological Evaluation at St. Michael's Hospital, Aylsham, Norfolk*

Morgan, S & Watkins, P Norwich : Norfolk Archaeological Unit, 2004, 75pp, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

Trenches located in a field immediately to the north of the hospital revealed the presence of an extensive post-medieval ploughsoil layer that sealed ditched and trackways of probable medieval date. These features were thought to represent a complex sequence of field systems and enclosure boundaries on the periphery of the medieval town of Aylsham. At least two pits excavated towards the northern end of this field contained burnt material that may be indicative of nearby medieval occupation. Within the ground of St. Michael's Hospital evaluation trenching revealed that much of the archaeological evidence has been removed or obscured by modern services. [Au(abr)]

A11 FIVEWAYS

An Interim Report on an Archaeological Evaluation at A11 Fiveways to Thetford Road Improvements Scheme

Ames, J Norwich : Norfolk Archaeological Unit

, 2004, 37pp, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

One hundred and sixty-nine trial trenches were excavated, fifty-five of which contained archaeological evidence. The earliest phases of activity recorded consisted of prehistoric pits and linear ditches, from which Neolithic pottery and worked flint were recovered. A substantial mid-to-late Romano British farmstead/settlement was located. Twenty-two evaluation trenches appeared to be located within the possible nucleus of the settlement which revealed linear ditches, domestic and quarry pits, possible structural evidence and occupational deposits overlain by aeolian drift sands. Truncation by intensive farming was evident throughout. [Au(abr)]

, 2004, 49pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Project Services

A series of dumped deposits containing both domestic and building waste dating from the medieval period (13th to 15th century) through to the post-medieval period (16th to 18th century) were identified. These had artificially raised the land surface in excess of 1.0m. Cut into the dump deposits, a series of undated pits and floor foundation levels dating to the 17th/18th century were recorded. More modern structures, a garage, warehouse and a dwelling had superseded these. Dating to the late 19th/20th century these were recently damaged by fire and consequently demolished leaving only their below ground foundations. [Au(abr)]

Whitmore, M Norwich : Norfolk Archaeological Unit, 2004, 17pp, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

Five trenches were excavated. A single prehistoric feature was recorded in Trench 1, no archaeological features were observed in Trenches 2 and three. In Trench three a layer of subsoil (containing pottery of prehistoric, Late Saxon and medieval date) interpreted as hillwash colluvium was recorded. Trench four contained two ditches forming the boundaries of an undated north-west to south-east aligned trackway. This trackway was cut by a shallow east-west orientated gully that contained pottery of medieval date and by a substantial east-west aligned ditch containing fragments of post-medieval brick and tile. A positive correlation could not be made between any of these features and the curvilinear feature seen on aerial photographs. [Au(abr)]

FORMER START-RITE FACTORY, NORWICH***An Archaeological Evaluation Beside the River Wensum at the Former Start-Rite Factory Site, Duke Street, Norwich, Norfolk***

Emery, G Norwich : Norfolk Archaeological Unit, 2004, 14pp, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

The earliest in situ archaeological feature on the site consisted of a Late Neolithic/Early Bronze Age pit cut. By the medieval period, large scale dumping of dredged deposits had occurred across the site. Preserved timber elements, strongly suggestive of a revetment constructed to maintain the soft bank, were encountered. A significant phase of ground build-up occurred in the 15th to 16th centuries, probably in an effort to reconstitute the marginal land. Several waste pits, a brick and mortar culvert and a foundation trench for a north to south boundary wall, also early most-medieval truncated this made up ground. [Au(abr)]

THREE SCORE, BOWTHORPE, NORWICH

An Archaeological Evaluation at Three Score, Bowthorpe, Norwich

Green, FNorwich : Norfolk Archaeological Unit

, 2004, 81pp, colour pls, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

A total of 1006, 50m long trenches were excavated in advance of a proposed housing development. Eighty-five features were identified in total, thirteen of which were tree-boles and periglacial features. The largest number of features were undated, being most frequent to the north and west of the site. Many of these features were likely to be prehistoric. Several probable prehistoric pits were excavated together with two Iron Age ditches and two pits. Two undated ditches were likely to be part of a previously identified Romano-British field system. A fine early Saxon 'two post' sunken-feature building was found in the southern central area. This contained a wide range of Early Saxon pottery together with fragments of loom weights, a brooch and large amounts of animal bone. A second less certain sunken feature building was also identified to the north of the site. No features of medieval date were observed but a ploughsoil of this date was observed in patches below the modern ploughsoil. [Au(abr)]

LAND OFF CANTLEY LAND, CRINGLEFORD

An Archaeological Evaluation for a Proposed School at Land off Cantley Lane, Cringleford, Norfolk

Emery, G Norwich : Norfolk Archaeological Unit
, 2004, 42pp, figs, tabs, refs

Work undertaken by: Norfolk Archaeological Unit

Seventeen trial trenches were excavated in response to a proposal for a new school at a site off Cantley Lane, Cringleford. A small assemblage of worked flint, which included a polished flint axe, which dated between the Later Neolithic to Bronze Age period, was recovered mostly from unstratified deposits. Also found were several shallow ditches and a low density of pits and post holes sealed beneath the subsoil, which had been previously dated as prehistoric. [Au(abr)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2004, 23pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

A programme of archaeological mitigation works were carried out in relation to a proposed housing development. Previous archaeological work on the site identified a high density of Saxon and Medieval features, perhaps as part of, or adjacent to, a settlement. Excavations revealed a Sunken Featured Building possibly dating to the early to middle Saxon period (AD 410-850) and possibly a slightly later post built structure. These were within a series of late Saxon enclosures, clusters of post holes, pits and a hearth. A slightly later Saxon ditch realigned the southern edge of the enclosure(s). [Au(adp)]

PHASE 4, CEDARS PARK, STOWMARKET

Phase 4, Cedars Park, Stowmarket, Suffolk. Archaeological Evaluation

Nicholson, K & Weston, P Hertford : Archaeological Solutions, 2004, 61pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

A trial trench evaluation was undertaken on Phase 4 of a large residential development. The work revealed features of Iron Age/prehistoric, medieval and post-medieval date. No Romano-British evidence was found, in spite of the presence of a Romano-British farmstead to the south-east. Among the Iron Age features were two curvilinear gullies which may have formed the drip gully of a roundhouse. Medieval and post-medieval features were mainly boundary ditches, but a 13th to 14th century cobble floor which may have been part of a building was also identified. [Au(adp)]

NETHERGATE STREET GARAGE, CLARE

Nethergate Street Garage, Clare

Gardner, R Bury St. Edmunds : Suffolk County Council Archaeology Service, 2004, 9pp, figs, tabs

Work undertaken by: Suffolk County Council Archaeological Service

Three evaluation trenches were excavated on the site. The area close to the street frontage was found to be truncated and contaminated. The remainder of the site was covered in overburden, which sealed a Roman boundary ditch and post hole, medieval pitting and a post-medieval ditch. [Au(adp)]

TRIAL HOLE FOR NEW PIPELINE AT WIXOE

Trial Hole for New Pipeline at Wixoe

Caruth, J Bury St. Edmunds : Suffolk County Council Archaeology Service, 2004, 4pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Monitoring was carried out on a trial hole for a proposed pipeline close to a known Roman villa site. Part of a grave cut was encountered and part of a human skull and humerus. The burial was identified as possibly being Roman in date. [Au(abr)]

FORMER SMYTHE WORKS, CHURCH STREET, PEASENHALL

Former Smythe Works, Church Street, PeasenHall

Gardner, R Bury St. Edmunds : Suffolk County Council Archaeological Service, 2004, 24pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Seven evaluation trenches were excavated on the site. Much of the site had been truncated by the 19th century Smythe Seed Drill Works. However medieval tenement boundary ditches were identified close to the street frontage. A pit and post hole were identified as being contemporary. A single feature of 15th-16th century was also identified. [Au(abr)]
