#### **27-28 QUEEN STREET, DERBY**

##### ***Archaeological Field Evaluation of a Proposed Development at 27-28 Queen Street, Derby: Summary Report***

Baker, S Nottingham : Trent &amp; Peak Archaeological Unit, 2004, 16pp, figs, tabs

*Work undertaken by:* Trent & Peak Archaeological Unit

An archaeological field evaluation was undertaken in advance of a proposed residential development. Seven areas were subjected to test pitting and a high density of features were recorded, cut into the natural subsoil. This included post holes, pits and ditches. The vast majority of these features were sealed by a buried soil of medieval date. Medieval pottery sherds were also recorded as well as a Roman pottery sherd. It was concluded that any development on the site, especially underground parking and foundations, could have caused extensive damage to any archaeological features. [AIP]

#### **3 FRIAR GATE, DERBY**

##### ***An Archaeological Evaluation at 3 Friar Gate, Derby***

Richards, G Leicester : University of Leicester Archaeological Services, 2004, 20pp, figs, tabs

*Work undertaken by:* University of Leicester Archaeological Services

An archaeological evaluation was undertaken in advance of a proposed two storey extension to existing offices. The site lay on the western side of the historic core of Derby and the adjacent Church of Saint Werburgh. To the south of the site lay Derby's Dominican Friary. Two trenches were excavated and failed to uncover any archaeologically significant remains, the area appeared to consist entirely of late 19th and early 20th century demolition material. [Au(adp)]

#### **CATHEDRAL ROAD, DERBY**

##### ***An Archaeological Evaluation At Cathedral Road, Derby***

Harvey, J Leicester : University of Leicester Archaeological Services, 2004, 40pp, figs, tabs, refs

*Work undertaken by:* University of Leicester Archaeological Services

An archaeological field evaluation of a site for proposed redevelopment, was undertaken. Six trial trenches were examined. Beneath modern disturbance, evidence for probable medieval garden soils was identified, together with the fragmentary remains of a stone structure of post-medieval or later date. Of note was a small dump of 19th century kiln waste, comprising fragments of saggars and biscuit fired pottery from the Derby Crown Porcelain Company Ltd. No other significant archaeological features were identified. [Au(adp)]

### **KING STREET, DERBY**

#### ***King Street, Derby. Archaeological Evaluation***

Ramsey, E      Birmingham : Birmingham Archaeology, 2004, 8pp, figs, refs

*Work undertaken by:* Birmingham Archaeology

An archaeological evaluation was undertaken following a previous evaluation on the site in 2003 and a desk-based assessment. Despite archaeological features being identified in the 2003 evaluation in the extreme eastern part of the site, no archaeological features or deposits were located in the 2004 work. This was interpreted as being due to extreme truncation as a result of modern activity on this area of the site. [AIP]

### **PROPOSED EAGLE CENTRE EXTENSION, DERBY**

#### ***An Archaeological Evaluation of the Proposed Eagle Centre Extension, Derby***

Kinsley, G      Nottingham : Trent & Peak Archaeological Unit, 2004, 8pp, figs

*Work undertaken by:* Trent & Peak Archaeological Unit

An archaeological evaluation, consisting of test pits was undertaken in areas of a proposed extension of the centre. The site was thought to contain the remains of a medieval castle, although no archaeological features were identified during test pitting, 19th century finds were recorded. It was concluded that archaeological features, may still have been present in the study area and the proposed development would have removed any potential remains in the area. [AIP]

#### **LUMFORD MILL, BAKEWELL**

##### *Lumfoed Mill, Bakewell, Derbyshire. Results of an Archaeological Field Evaluation*

Strange, P Bakewell : Peter Strange, 2004, 10pp, colour pls, figs

*Work undertaken by:* Patrick Strange

An archaeological field evaluation was undertaken in advance of a proposed redevelopment of the area. The aim was to locate the 1776 main mill eastern wall which was presumed to have survived a recorded 1868 fire. The presence of modern development meant that the earlier courses of this wall could not be investigated during the evaluation. A single dressed quoin which appeared to be in situ was recorded, associated with the south wall of the mill. It was hoped that more remains would be revealed once redevelopment of the area had commenced. [AIP]

Bell, S Sheffield : ARCUS, 2004, 23pp, figs, tabs, refs

*Work undertaken by:* ARCUS

An archaeological field evaluation was undertaken in advance of a proposed mineral extraction and 13 trenches were excavated. These were located on areas that had previously been identified as having anomalies by a geophysical survey in 2003. Changes in the location of field boundaries was observed, as well as a linear feature, interpreted as a former boundary marker and a pair of subcircular features were interpreted as marking the former location of stone gateposts. A subcircular mound was also identified in the south-west corner of the area and excavation showed it to be of probable recent origin. No deposits of archaeological significance were identified within, or underlying the mound. [Au(adp)]

**LAND AT FOXCOVERT FARM*****Land at Foxcovert Farm, Derbyshire. Archaeological Evaluation***

Michaels, T Swindon : Foundations Archaeology, 2004, 12pp, figs, refs

*Work undertaken by:* Foundations Archaeology

A programme of archaeological evaluation was undertaken in advance of a proposed new meeting room and associated car park. All of the archaeological features present were dated to the late post-medieval/modern period and were most likely related to domestic and agricultural activities for Foxcovert Farm. There was no evidence within the study area for the continuation of the enclosures identified from crop marks and the excavation of 1994. With the exception of one flaked tool, no other artefacts dated earlier than the late post-medieval period were present within the study area. The potential of the study area, therefore, was considered as low, however, the possibility of prehistoric features could not be discounted. [Au(adp)]

*An Archaeological Field Evaluation for the Proposed Development at 72 Oxford Street, Leicester*

Hunt, L Leicester : University of Leicester Archaeological Services, 2004, 14pp, figs, refs

*Work undertaken by:* University of Leicester Archaeological Services

An archaeological evaluation by trial trenching was carried out in advance of a proposed residential development. Until recently the site had contained a public house and lay to the south of the Roman and medieval walled towns of Leicester. The site was in an area adjacent to a number of sites with known archaeological remains. The evaluation revealed a number of features and included potential boundary ditches and pits which contained pottery from the Roman and medieval periods. [Au(adp)]

*Archaeological Evaluations at 72 St Nicholas Circle, Leicester*

Priest, VLeicester : University of Leicester Archaeological Services, 2004, 31pp, colour pls, figs, tabs, refs

*Work undertaken by:* University of Leicester Archaeological Services

An archaeological evaluation was undertaken in advance of a proposed development. The work found that the development area had been disturbed by cellars to the north-east, although early Roman deposits were recorded below the cellar floor. Across much of the site post-medieval and later buildings and pits had truncated any archaeology within the upper metre of deposits. Medieval archaeology was visible from about 1m below the ground surface which consisted of intercutting pits (some of which cut Roman deposits) and there was also evidence for structural remains. There was evidence in parts of the site that earlier archaeology continued after the limit of excavation. [Au(adp)]

#### **SHIRES WEST, SITE 5, FREE SCHOOL LANE, LEICESTER**

*An Archaeological Evaluation at Shires West, Site 5, Free School Lane, Leicester*

Gnanaratnam, A Leicester : University of Leicester Archaeological Services, 2004, 27pp, figs, tabs, refs

*Work undertaken by:* University of Leicester Archaeological Services

A staged archaeological evaluation was carried out in advance of the proposed 'Shires West' development. The work established the presence of significant archaeological deposits comprising early post-medieval or medieval building remains. These seemed to include clay built walls, as well as clay or earth-bonded rubble walls. Below these layers were probably Roman deposits of varying

thickness, seen mainly in an auger survey. At the rear of the car park, sondages cut down to around 4m below ground surface indicated that the area had probably been subject to truncation, perhaps from quarrying and the ground made up with poorly differentiated soils. The truncation had removed any clearly stratified Roman deposits and the extent of the disturbance was not clear. [Au(adp)]

Richards, G      Leicester : University of Leicester Archaeological Services, 2004, 23pp, figs, tabs, refs

*Work undertaken by:* University of Leicester Archaeological Services

An archaeological evaluation was undertaken in advance of a proposed residential development. There were well documented Iron Age settlements within close proximity of the proposed development. The excavation of Trench 3 uncovered a substantial Iron Age enclosure ditch which contained a large quantity of pottery fragments. There was also evidence for a build up of colluvium, which initially masked the ditch across the development area. Over one half of the proposed development site was unavailable for evaluation because construction and landscaping had already taken place prior to archaeological involvement. [Au(adp)]

### **LAND TO THE EAST OF THE RED LION PUBLIC HOUSE, COSSINGTON LANE, ROTHLEY**

*Land to the East of the Red Lion Public House, off Cossington Lane, Rothley, Leicestershire. An Archaeological Evaluation*

Ramsey, E      Birmingham : Birmingham Archaeology, 2004, 11pp, figs, refs

*Work undertaken by:* Birmingham Archaeology

An archaeological evaluation was undertaken in advance of a proposed residential development. A small collection of struck flint was recovered from the plough horizon at the southern end of the site and suggested at least some level of prehistoric activity in the area. A possible curvilinear gully was identified in the vicinity of the flint collection. The evaluation also identified a single linear feature parallel to Cossington Lane at the southern end of the site and a series of linear features on the same alignment further to the north-west. These linear features were on the same alignment as the remnants of possible medieval strip fields previously identified in a desk-based assessment. No dating evidence, however, was recovered from any of these features, or from the earlier ploughsoil horizon identified underlying the top-soil across the whole of the site. [Au(adp)]

*Work undertaken by:* University of Leicester Archaeological Services

An archaeological field evaluation was undertaken in advance of the proposed construction of a commercial development. The site lay in an area identified as having moderate to high archaeological potential. The evaluation revealed a number of archaeological features dating from the Neolithic to the Early Bronze Age, including pits containing worked flint, pottery, charcoal and hazelnuts. Another earthwork survey revealed that in the six years since the last survey, evidence of ridge and furrow cultivation had been eradicated by ploughing. Other linear features were discovered, which may have dated from a later period. [Au(adp)]
