Thompson, P & Williams, J Hertford : Archaeological Solutions, 2004, 28pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The features (pits and gullies) cutting the natural drift were associated with Late 15th to 17th century activity in the backplots of the features fronting Cheylesmore Lane. There were likely to have been refuse pits and property boundaries, emphasised by the high quantity of domestic waste retrieved from

the features. A stone surface or path post-dated the pits and gullies. It may have been part of a yard surface within the backplots, but equally may have formed the post-medieval boundary shown on the 18th century maps. [Au(abr)]

LAND AT CARTER ROAD, COVENTRY*Land at Carter Road, Pinley, Coventry, West Midlands. An Archaeological Evaluation 2004*

Ramsey, E Birmingham : Birmingham Archaeology, 2004, 20pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

A possible boundary ditch that contained pottery dated to the early 19th century was identified in the southernmost trench. In the northernmost trench, located between the buildings fronting the Moorfield, an oval brick structure within a large area of modern disturbance was identified. This structure was approximately 1.3m in diameter and constructed from purple engineering bricks. It was interpreted as either a well associated with the allotment plots, or an escape hatch for an air-raid shelter. No other archaeological features or deposits were encountered during the work. FORMER WELSH WATER DEPOT, COUGHTON, ROSS-ON-WYE***Former Welsh Water Depot, Coughton, Ross-on-Wye. Archaeological Trial Trenching***

Crooks, K Hereford : Archaeological Investigations Ltd., 2004, 19pp, figs, tabs, refs

Work undertaken by: Archaeological Investigations Ltd.

An agreed sample of 3% was examined by trial trenching. Archaeological deposits included a ditch with pottery dating to the late Iron Age period in Trench 2 and large ditches with Roman Severn Valley ware in Trench 5. A single sherd of Roman pottery was also recovered from a possible feature at the southern end of Trench 3. Although structural remain such as walls or post holes were not present the amount of late Iron Age pottery recovered from the ditch in Trench 2 suggests that occupation was most probably present in the immediate area. Substantial stone drains were present in Trenches 1 and 2, the stratigraphy and construction of these also suggest a possibly early date though this was not certain. [Au(abr)]

Crooks, K Hereford : Archaeological Investigations Ltd., 2004, 12pp, figs, tabs, refs

Work undertaken by: Archaeological Investigations Ltd.

An evaluation in advance of the construction of five new dwellings found a large post pit of late medieval date in the middle of the site, though no surfaces were associated with this feature. A further post hole to the south was smaller and of a different form and may not have been associated with the larger post pit, though this cannot be ruled out. Two substantial rubbish pits were also present, one containing later medieval pottery including a sherd of Brill Boarstall ware, usually dated to the late 13th to 14th centuries. There was no sign of any medieval back plot industry and there was no surviving stratigraphy. [Au(abr)]

Wainwright, J Clun : Marches Archaeology, 2004, 20pp, figs, tabs, refs

Work undertaken by: Marches Archaeology

Two trenches were excavated. Medieval features and deposits survived on the site. It seemed likely that the first phase of activity was the excavation of a pit in trench one. A post hole excavated in trench 1 was probably backfilled by the late 13th century or early 14th century. In trench 2, the area seemed to have been terraced during the post-medieval period and only a small area of later medieval soil lying directly on top of the natural remained. During the 18th century a wall was built. This was probably the return of a garden wall situated to the west of the study area. [Au(abr)]

Land to the Rear of 9-10 King Street, Ludlow, Shropshire. A Report on an Evaluation

Kenney, J Clun : Marches Archaeology, 2004, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Marches Archaeology

Two evaluation trenches were dug to assess the proposed development site within the medieval core of Ludlow. In trench one a sequence of building phases were revealed dating from the 15th century through to the 20th century. The earliest wall found may have formed an earlier wall to the churchyard. In trench two, a house dating to the 14th century was found with a plastered internal floor and flagged exterior courtyard. It is possible that medieval burials survived in the western end of the site, but none were located in the evaluation. [Au(abr)]

Archaeological Evaluation at Old Farm Road, Mancetter, Warwickshire

Warwickshire Museum Field Services
18pp, colour pls, figs, refs

Warwick : Warwickshire Museum Field Services, 2004,

Work undertaken by: Warwickshire Museum Field Services

Archaeological evaluation at Old Farm Road, Mancetter, on the edge of the area occupied by the Roman fortress, was able to demonstrate that the proposed development site lies on the line of the Roman defences in the north-west corner of the fortress. A sequence of two parallel ditches of 'military type', dating from the 1st century AD was found preserved beneath the floor slabs of 20th century houses. An oven type feature located outside the outer of the two ditches represents the first evidence of Roman activity outside the western boundary of the fortress. A small group of features found between the ditches included a pit of Early/Middle Bronze Age date, representing the first evidence for activity of this date in this part of Warwickshire. [Au]

Archaeological Evaluation at the Ropewalk, Chapel Street, Nuneaton, Warwickshire- Stage 1b

Warwickshire Museum Field Services Warwick : Warwickshire Museum Field Services, 2004, 12pp, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

The second stage of an archaeological evaluation of land off Chapel Street in advance of the town centre Ropewalk development recovered evidence for medieval and post-medieval activity in the northern part of the development area including post holes, boundary features and yard surfaces. Two pebble surfaces and an associated boundary gully dating from the late medieval/ early post medieval period were recorded from close behind the Queen's Road frontage. Further to the rear a medieval post hole may have belonged to a structure within a tenement running back from Queen's Road, while the remains of a ditch may have marked the rear boundary of the tenement or a division within it. The area has been heavily truncated during the 1970s redevelopment of the area. [Au]

Duncan, M Birmingham : Birmingham Archaeology, 2004, 18pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

Five trial trenches were located on part of the land fronting Waterloo Road. Three ditches, a gully and four ephemeral pits were identified in the trenches. No pottery was recovered from the fills and only a single piece of flint was recovered from one of the pits. These features were cut into the natural glacial tills. The flint artefact could only be ascribed as dating to the late prehistoric period. The ditches lay neither parallel nor perpendicular to the current road, or line of the former Roman road. Warwickshire Museum Field Services

Warwick : Warwickshire Museum Field Services, 2004,

29pp, pls, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

An archaeological evaluation was carried out on the proposed site of a new office development on the edge of the medieval suburb of Saltisford, Warwick on the site of the medieval leper hospital, a Scheduled Ancient Monument. Within the Scheduled Area complex medieval stratigraphy dating back to the 13th century was revealed. The archaeological remains included stone wall foundations, a pebble yard surface, post holes and pits in the area between the Chapel and the Master's House. Post-medieval

remains were also recorded in this area, including stone wall foundations and occupation surfaces. Evidence for possible medieval activity was recorded to the rear of the Master's House including a boundary or retaining wall and a possible rubble surface. A modern boundary ditch was also recorded that may have been the re-cut of an earlier feature. The northern part of the site outside the scheduled area revealed only two gully features and part of the area to the rear of the development site appears to have been subject to extensive dumping during the late 20th century. Cullen, K Cirencester : Cotswold Archaeology, 2004, 10pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

An archaeological evaluation was undertaken in advance of a proposed three storey building and associated works. Several deposits related to the post-medieval and modern periods were uncovered, the majority in the form of intercutting rubbish pits dated from the 15th to 17th centuries. It was likely that the rubbish pits were at the rear of a housing plot fronting onto Brick Kiln Street, which supported the theory that the street was a late medieval or early post-medieval insertion into the Evesham town plan.
