EVELYN'S CITY ACADEMY, APPLE TREE AVENUE***Evelyn's City Academy, Apple Tree Avenue, London Borough of Hillingdon Archaeological Evaluation***

Clarke, C Twickenham : AOC Archaeology Group, 2002, 11pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was undertaken on the site. The evaluation involved the opening of four, machine excavated trenches distributed across the development area. Two features were revealed and there were interpreted as late post-medieval boundary ditches, which had been backfilled and deliberately levelled off. The natural across the site was gravel. [Au]

HATTON CROSS HOTEL, HEATHROW***Hatton Cross Hotel, Heathrow. Archaeological Evaluation Report***

Framework Archaeology Salisbury : Framework Archaeology, 2002, 13pp, figs, tabs, refs

Work undertaken by: Framework Archaeology

The archaeological evaluation, consisting of four machine excavated trial trenches, identified a number of modern pits and a linear feature. Four test pits were excavated within the footprints of each trench. The evaluation produced no evidence to suggest any surviving features of archaeological significance within the evaluation area. It is recommended that no further mitigation is required for the site. [Au(abr)] *SMR primary record number:* 17/218

PROPOSED INTERNATIONAL BUSINESS TRAINING CENTRE, SIPSON ROAD, SIPSON***Proposed International Business Training Centre, Sipson Road, Sipson. London Borough of Hillingdon. Archaeological Evaluation***

Wessex Archaeology Salisbury : Wessex Archaeology, 2002, 31pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation comprised the machine excavation of 24 trenches measuring 30m x 3m. Excavated features comprised truncated postholes, ditches and natural features cutting natural brickearth. The majority of the features can be dated to the post-medieval period with the exception of the linear in Trench 7. This north-south aligned feature which terminated in the trench, contained abraded sherds of Late Bronze Age/Early Iron Age date. The archaeological remains identified in the evaluation are not significant enough to constrain the design of the development. Substantial impacts will be limited to the areas of the new building and further work may be merited to record the extent and nature of these archaeological remains. [Au(abr)] *SMR primary record number:* 17/302

PROPOSED SNOWBASE, EASTCHURCH ROAD, HEATHROW AIRPORT

Proposed Snowbase, Eastchurch Road, Heathrow Airport: London Borough of Hillingdon. Archaeological Evaluation Report

Framework Archaeology Salisbury : Framework Archaeology, 2003, 16pp, figs, tabs, refs

Work undertaken by: Framework Archaeology

The archaeological evaluation, consisting of 4 machine excavated trial trenches produced no evidence for any surviving features of archaeological significance within the excavation area, except for the south-eastern corner of a large country house, known to have been constructed between AD 1821-1841. This was located in Trench 1, along with a pit of post-medieval date. The site contained a large number of modern service trenches, which have heavily truncated the site. It is recommended that no further mitigation is required for this site. [Au(abr)] *SMR primary record number:* 17/338

ST VINCENT'S HOSPITAL, WILTSHIRE LANE, EASTCOTE

An Archaeological Evaluation at St Vincent's Hospital (Residential Site), Wiltshire Lane, Eastcote, London Borough of Hillingdon

Capon, L Twickenham : AOC Archaeology Group, 2002, 20pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

Seven trenches were excavated. One trench, to the east of the site, revealed the heavily truncated remnants of a possible boundary ditch. No other remains of interest were identified. [Au(abr)] *SMR primary record number:* 17/225
