Dodds, D &amp; Weaver, S Oxford : Oxford Archaeology, 2002, 42pp, colour pls, figs, tabs, refs

*Work undertaken by:* Oxford Archaeology

The northern extent of the area under investigation was an archaeologically rich one. Evidence for occupation and settlement here from the Bronze Age to Roman periods was discovered, in the form of finds. Also, finds in the colluvium layer may represent settlement activity outside of the study area. [Au(adp)]

*Work undertaken by:* Wessex Archaeology

Earlier archaeological works had identified significant potential for in situ Mesolithic material. However, 29 trenches and 132 test pits revealed 23 linear features, and a brick-lined soakaway, all of modern origins. No archaeological finds or features were discovered, and it was concluded that the lithic scatter identified by the earlier excavation had been subject to recent disturbance. [Au(abr)]
