Kenyon, D Cirencester : Cotswold Archaeological Trust, 2002, 19pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

Several wall footings and drainage culverts were revealed during the course of this work, all dating from the 18th-19th centuries. Some were associated with known buildings shown on historic plans of the site. Traces of earlier occupation were discovered in the form of a 17th century pit, as well as a single sherd of medieval pottery from a buried soil horizon. [Au(abr)]

THE GROVE, STONEHOUSE*The Grove, Stonehouse. Archaeological Evaluation*

Harvard, T & Cox, S Cirencester : Cotswold Archaeological Trust, 2002, 25pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

The evaluation was carried out specifically to establish whether the Grove, a now-demolished 16th/17th century building, post-dated any other structures. Foundation walls of the Grove were discovered, and it was thought that any earlier buildings would have been truncated by the construction of the Grove. The archaeological significance of the area was considered as low. [Au(adp)]

Adam, N & Hawkes, J Hindon : AC archaeology, 2002, 10pp, figs, tabs, refs

Work undertaken by: AC archaeology

The site was recognised as almost certainly the location of the 13th century manor. Segments of a shallow U-profiled ditch were excavated, which yielded a small assemblage of abraded 12th-13th century pottery. Modern development was expected to have severely truncated or destroyed any other remains at the site. [Au(adp)]

Patrick, C Worcester : Worcestershire County Council Archaeological Service, 2002, 25pp, figs, tabs

Work undertaken by: Worcestershire County Council Archaeological Service

The evaluation carried out on the site showed that the site has strong archaeological potential with well preserved remains. Medieval features were identified including pits and ditches, containing domestic debris. Environmental evidence showed the areas were used for animal husbandry and crop processing. Evidence was uncovered that cottages and workshops occupied the site in the post-medieval period. [Au(abr)]

Wainwright, J Clun : Marches Archaeology, 2002, 24pp, figs, tabs, refs

Work undertaken by: Marches Archaeology

An archaeological evaluation was carried out prior to development on the site. Two Roman pits and a soil horizon were excavated. One of the pits contained non native wares. Medieval pits and garden soils dating from the 13th-14th centuries were identified, possibly belonging to backplots of burgage plots. Late medieval and post-medieval pits were also identified. Coleman, L Cirencester : Cotswold Archaeological Trust, 2002, 32pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

The evaluation confirmed that anomalies identified by an earlier geophysical survey were consistent with Romano-British rural settlement, a specially in the north-eastern part of the study area. This evidence primarily comprised ditches possibly relating to Late Iron Age roundhouses, and a rectilinear system of enclosures dating to the Romano-British period. Ditches and pits relating to others of the

South West Region

above were found across the area, although less densely located. A zone of high archaeological potential was declared in the north-eastern area. [Au(abr)]

THE FORMER COAL RESEARCH ESTABLISHMENT, STOKE ORCHARD

The Former CRE, Stoke Orchard. Archaeological Evaluation

Young, R Cirencester : Cotswold Archaeological Trust, 2002, 15pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

No archaeological deposits were encountered. However two of the trenches were located in an area displaying extant ridge and furrow, whilst two more displayed indications of denuded ridge and furrow in the upper surface of natural clay at their bases. Apart from this, the evaluation was thought to demonstrate a lack of archaeological deposits in this area. [Au(abr)]
