**West Midlands Region**

A series of evaluation trenches were excavated on the site. A small number of pits and post holes were identified on the west of the site. A small number of blackware sherds of 13th-14th century date were recovered from the features. These features were sealed by ridge and furrow. A wide linear ditch was identified on the western edge of the site, containing 18th century finds. A charnel pit was also identified, also of an 18th century date. [Au(abr)]

Williamds, P, Hurst, D, Pearson, E & Darch, E Worcester : Worcestershire County Council Archaeological Service, 2002, 27pp, figs, tabs

*Work undertaken by:* Worcestershire County Council Archaeological Service

An archaeological evaluation was carried out on the site. Deposits were encountered from the Roman and Medieval period, with the earliest feature being an Iron Age/Roman pit containing timber work. The pit was possibly used as a brine storage tank. A medieval layer containing industrial waste material was identified. A cobbled surface partially spread across the site dating from the late medieval phase of the site. Structure and deposits belonging to the 18th century saltworks that were on the site were also noted. [Au(abr)]
