Bruce, G &amp; Ferguson, M-C York : On Site Archaeology, 2002, 16pp, figs, tabs, refs

*Work undertaken by:* On Site Archaeology

An evaluation was carried out in advance of proposals for a residential development. The south-east part of the site was shown to contain 18th century made ground, as well as 19th century garden features. A single shallow undated pit was also encountered. A small quantity of Roman and medieval pottery was found. Despite the proximity of Civil War defences and a Roman burial site, there was no evidence for activity of this nature on the site. *Work undertaken by:* On Site Archaeology

The development area was located on what was the graveyard for St. Nicholas' Church from the 12th to 17th centuries. Two trenches yielded human remains, however the rest of the site was mostly post-medieval demolition rubble and some medieval deposits. The evaluation was aimed at reducing the impact of the development and it was accepted that further archaeological work could be needed to achieve this. [Au(adp)]

The evaluation was designed to define the extent of a possible Roman inhumation cemetery, known to lie within the compound. Five phases of activity were revealed from the Roman to the Victorian period. A Roman inhumation burial and two urned cremation burials were superseded by Roman structural activity. A large earthen Post-Roman bank of the 9th -11th centuries was maintained and persisted for some time. An episode of levelling then masked the boundary and medieval refuse disposal and the accumulation of post-medieval garden soils followed. [Au(abr)]

Bruce G, Ferguson, M-C & Hopkinson, G York : On Site Archaeology, 2002, 99pp, colour pls, figs, tabs, refs

*Work undertaken by:* On Site Archaeology

The evaluation was carried out in advance of a mixed development. Borehole data revealed that the site lay above a significant depth of archaeological deposits. Finds from the Roman, Anglo-Scandinavian and medieval periods were present. Some of the buildings were found to have shallow foundations that had not impacted upon the medieval archaeology, however in other places deposits were severely truncated. A trench was excavated to assess the position of the Roman and medieval cemeteries, however they were not found. Evidence for Roman landscaping, an Anglo-Scandinavian pit and a sequence of medieval deposits and cuts were recorded and related to refuse disposal. Post-medieval boundary ditches were identified which possibly separated the properties from the dump were located, as well as evidence for 19th century buildings. [Au(abr)]

An evaluation was undertaken in response to proposals to redevelop the area. No structural activity earlier than the 19th century was encountered although the evaluation did reveal substantial below-ground structures related to the gasworks. It was thought that pre-gasworks archaeology survived beneath and between these remains.

Ottaway, P York : York Archaeological Trust, 2002, 24pp, figs, refs

*Work undertaken by:* York Archaeological Trust

The site was intended for use as a park and ride and other business developments. However, an aerial photograph survey identified two Roman camps. The line of the camps was sectioned and the rampart and a small ditch were located. No other Roman features were found. No finds were noted either and no activity subsequent to the Roman demolition of the fort until field drainage and ploughing in the 19th and 20th centuries were located. [Au(abr)]

Brinklow, D York : York Archaeological Trust, 2002, 55pp, figs, tabs, refs

*Work undertaken by:* York Archaeological Trust

The evaluation was carried out in advance of a residential development. A previous geophysical survey had revealed areas of potential. Many of these anomalies were not located and probably indicated geological fluctuations. However, ditches, post holes and linear gullies were noted, as well as the

***Yorkshire & Humberside Region***

remnants of medieval ridge and furrow. Finds indicated that the site had been manured in the medieval and post-medieval periods. [Au(adp)]

*Work undertaken by:* On Site Archaeology

An evaluation was carried out on the car parks in advance of potential redevelopment. A number of Anglo-Scandinavian and medieval pits were observed cutting into the natural bedrock and a late 12th century shallow ditch was observed in the north east corner of the site. Roman and medieval post holes, thought to be of agricultural origin, were observed across the site. Two phases of clay ramparts, forming the city defences, were encountered at the eastern end of the site. [Au(abr)]
