Work undertaken by: Peter F Ryder

On this occasion the archaeological watching brief did not reveal any evidence of great import, other than one previously unrecorded window opening of uncertain date. However, this is an important church of possible early origins (research is continuing as regards and important sepulchral slab, now thought to be of pre-conquest date, that has been re-used as a lintel in the tower). The archaeological survey produced a full record of the consolidation and repair work. Much of the consolidation work was carried out in areas that have not revealed significant evidence about the house. However, the access provided for work on the walls and chimneys enabled areas of the house adjacent to those under repair to be examined closely. [Au(abr)]

Work undertaken by: Tyne & Wear Museums Archaeology Department

The results of the watching brief will inform the SMR. The works were situated within the Hadrian's Wall corridor. Trench 1 contained tentative evidence of a large cut feature of uncertain provenance. There was no trace of the feature within the adjacent trench 2b there it is unlikely to represent the Wall ditch. A north-south orientated wall likely to date from the 19th century was recorded within trench 2a. [Au(abr)]

Work undertaken by: Tyne & Wear Museums Archaeology Department

The results of the investigation revealed that the site had been artificially stepped back into the natural bedrock of the northern bank of the River Wear to produce a series of level terraces on which the earlier industries sat. These terraces were retained by stone walls, and rebuilding, especially in the modern era, has removed nearly all traces of former buildings and works. [Au(abr)] *SMR primary record number:* 2003/3
