FRECKLETON, RISING MAN*Freckleton, Rising Man, Lancashire*

Clark, P Lancaster : Oxford Archaeology North, 2003, 31pp, pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

A number of modern features, relating to recent land usage, were uncovered and a large floor defence was truncated. The nature of the deposits exposed during the course of the trench excavation indicated the estuarine nature of this land before reclamation. [Au(abr)] *SMR primary record number:* 3291

Hughes, V Lancaster : Oxford Archaeology North, 2003, 84pp, colour pls, pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

The watching brief confirmed the presence of tipped material over much of the site. A small number of Roman and medieval potsherds were recovered. Post-medieval pottery made up the bulk of the finds. While there was the potential for medieval or Roman deposits on the site, these would be at considerable depth. It was considered that no further archaeological investigation would be necessary. North West Region

The excavations in November 2002 provided evidence of four phases of occupation on the site. The earliest with a medieval boundary ditch, the second a late medieval pit and ploughsoil horizon, phase 3 comprised seven linear features and ploughsoil of probable seventeenth or eighteenth century date and the fourth phase demonstrated evidence for animals and rubbish pits dating to the late eighteenth and nineteenth centuries. Pendle Heritage Centre Archaeological Group Burnley : Pendle Heritage Centre Archaeological Group, 2002, 11pp, colour pls, figs

Work undertaken by: Pendle Heritage Centre Archaeological Group

The small excavation has indicated that the main occupation level was in use during the late 17th century to the latter decades of the 18th century. The non-alignment of the foundation course was not clarified. [Au(adp)]

Work undertaken by: Oxford Archaeology North

A series of trial trenches was excavated, but only one trench revealed any surviving archaeological remains. These comprised a brick-lined cellar with a conical brick feature butted against one corner. The purpose of this feature is uncertain but it may relate to a small-scale industrial workshop of probable nineteenth century date. [Au(abr)] *SMR primary record number: 3300*

Work undertaken by: University of Manchester Archaeological Unit

Observations were conducted during the preliminary construction phases of two kitchen 'wings' which were to be appended to a barn during its conversion into domestic property. Findings revealed a dearth of archaeological material. Save for the discovery of a demolished wall constructed from machine-made brick and a suspected 19th century drain, results indicated that the barn and its extensions rested on natural geological deposits. Work undertaken by: Oxford Archaeology North

None of the trenches excavated revealed remains of any antiquity. The trenches were only excavated to a maximum depth of 0.6m and, therefore, it was highly likely that earlier remains may be preserved below this depth. [Au(abr)]
