Broomhead, R A Croscombe : R A Broomhead, 2002, 9pp, colour pls, figs, refs

*Work undertaken by:* R A Broomhead

Although prior investigations had had demonstrated the presence of a medieval boundary ditch and post-medieval occupation, additional excavation established only that the site was dominated by made ground of the post-medieval period. The course of the previously identified ditch was briefly noted but no further evidence regarding its origins or the possible existence of earlier occupation the site was identifiable. [Au(abr)]

*Work undertaken by:* Mark Corney, Peter Leach & Richard Tabor

The survey was carried out as part of the initial stages of a project to manage the woodland. A complex of holloways, quarries and funerary monuments demonstrated the range of archaeological material in the study area. Bronze Age round barrows formed part of a larger cemetery, and a trackway linked the area to the Fosse Way, which bounded the site to the east. Three post-medieval boundary stones were also recorded. [Au(abr)]

*Work undertaken by:* Exeter Archaeology

Underneath a post-medieval garden soil, two gullies, a pit and possible well of post-medieval date were recovered. Two linear features were thought to represent the alignment of medieval boundaries. Pits, post holes and environmental material led to the interpretation of the site as a medieval farm, with little activity between this period and the 17th century. Structural remains of the building noted on the 1842 Meare Tithe map were encountered. Environmental samples revealed much about the nature of crops grown in the vicinity.

**WHATLEY QUARRY*****Excavation of a 17th Century Farmstead at Home Great Mead, Whatley, Somerset***

Young, A C    Bristol : Avon Archaeological Unit, 2002, 92pp, colour pls, figs, tabs, refs

*Work undertaken by*: Avon Archaeological Unit

The excavation was carried out in advance of an extension to the quarry. Previous work had indicated the existence of a 17th century farmstead, and this excavation located and recorded this feature. The floor area consisted of bays with a cobbled floor and hearth, and the walls were preserved as soil features, originally made from cob and timber. Later development from the original single storey structure was evident from features such as a stairwell post hole. A large number of artefacts, including clay pipes and glass tableware, dated the structure. It was demolished by 1805, however some pipes indicated that the site was occupied before 1682. In general the location corresponded well with the cartographic evidence. [Au(abr)]

McDonnell, R Long Ashton : Richard McDonnell & Keith Faxon, 2002, 13pp, colour pls, figs, tabs

*Work undertaken by:* Richard McDonnell & Keith Faxon

There was found to be Roman activity on or near the site, resulting in a significant spread of occupation debris, including pottery and animal bone on the surface of the gravels. There were also two phases of medieval activity. Phase one was represented by what were interpreted as graves, thought to be cut when the area was part of a medieval churchyard. The second phase was associated with the contraction of the churchyard and the construction of the house. In addition, post-medieval extensions to the house as well as agricultural activity were also noted. [Au(abr)]

**THE MEDIEVAL MANOR HOUSE, KILVE***An Early Medieval Manor House and Landscape at Kilve, Somerset*

Jamieson, E Matford : English Heritage, 2003, 26pp, colour pls, figs, refs

*Work undertaken by:* English Heritage

The survey was carried out to assess the building remains and the surrounding landscape of the medieval manor house, dated to the late 13th to early 14th century. It was thought that the building formed the focus of a much wider medieval landscape. A church, chapel, several paddocks or closes representing medieval gardens and orchards, and fishponds were located within the manorial enclosure. The wider landscape incorporated a medieval deer park and natural harbour, access to which would have been controlled by the manor. [Au(abr)]

**NORTH STREET, LANGPORT**

*An Archaeological Watching Brief at North Street, Langport, Somerset*

Leach, P Pilton : Peter Leach Archaeological Consultant, 2002, 12pp, figs, refs

*Work undertaken by:* Peter Leach Archaeological Consultant

Following the removal of modern material from the site, some remains of earlier occupation were encountered. Foundations of 18th and 19th century cottages were recovered, as well as contemporary outbuildings and other structures or boundaries. Surviving in places beneath this horizon were the remains of pits, boundaries and possible structures or floors datable to the 12th-15th centuries. [Au(abr)]

**SILKOLENE WORKS, LANGPORT**

*Silkolene Works, Langport. Archaeological Observations*

Broomhead, R A Croscombe : R A Broomhead, 2002, 5pp, colour pls, figs

Work undertaken by: R A Broomhead

The watching brief was carried out to monitor the excavation of geotechnical test pits. The method of excavation precluded the observation of archaeological remains, however examination of the spoil did not indicate archaeological activity. Excavation of the standing buildings, however, revealed them to be founded on a former wharf wall. [Au(abr)]

**THE NORTHOVER MANOR HOTEL, ILCHESTER**

*An Archaeological Excavation at the Northover Manor Hotel, Northover, Ilchester*

Leach, P Glastonbury : Hollingrake, C & N Hollinrake, 2002, 27pp, figs, tabs, refs

*Work undertaken by:* C & N Hollinrake

The excavation was carried out after a previous evaluation recovered significant archaeological remains, notably of the Roman period. This excavation recovered a notable sequence of Roman structural and occupation deposits relating to the development of Ilchester's northern suburb. Late Roman deposits appeared to have been truncated but evidence of medieval rubbish pits and post-medieval use of the site was present. [Au(abr)]

## South West Region

The route of the water pipeline was thought to endanger elements of the village, which had Anglo-Saxon origins. The watching brief added modest detail to the recorded archaeological and historical record. Demolition debris from a post-medieval house, the remains of a 20th century workshop or store, two possible field boundary ditches, roadside drainage gullies and a scatter of post-medieval domestic refuse were recovered. [Au(abr)]

**WLLITON-WATCHET WATER PIPELINE**

*An Archaeological Watching Brief on a Wessex Water Renewal Pipeline between Williton and Watchet*

Hollinrake, C & Hollinrake, N Glastonbury : Hollingrake, C & N Hollinrake, 2002, 75pp, figs, tabs, refs

Work undertaken by: C & N Hollinrake

An earlier fieldwalking exercise had recovered Mesolithic flints, as well as Neolithic and Bronze Age lithic material and medieval pottery sherds. The pipeline itself cut through a series of Middle Bronze Age pits. An important assemblage of Trevisker pottery with associated lithic material and fired clay fragments was recovered. A Roman site was also identified immediately to the north of this site, containing pottery and roof tiles. [Au(abr)]
