Work undertaken by: Roe, M.

The walking assessment identified 13 features within the study area. The features indicate activity from the prehistoric period through evidence of cairns and stone walls and boundaries and possible structures. A bridge is representative of medieval/post-medieval date and the occurrence of two quarries indicate activity during the post-medieval period. [Au(adp)]

Dennison, E Beverley : Ed Dennison Archaeological Services, 2002, 14pp, figs, colour pls, refs

Work undertaken by: Ed Dennison Archaeological Services

A watching brief on the site revealed some information relating to the construction of the culvert. The culvert was as a single phase structure, built after the start of smelting on the site. Alternatively the culvert may have originated as a canalisation of the Lemon Gill, with the vault in the area of the smelt mill being added at a later date, possibly to create a wider working area around the mill, or to prevent blocking or silting of the water course. On Site Archaeology York : On Site Archaeology, 2002, 17pp, colour pls, figs, tabs

Work undertaken by: On Site Archaeology

A watching brief took place during the installation of a support system for the bridge. During this work a stone bearing the date 1749 together with the builders' names was found in the bed of Kex Beck. What appeared to be a cruck timber was also found some 10m downstream from the bridge. The arch itself was of interest, several of the stones appeared to be reused from an earlier structure possibly a masonry bridge. Beneath the modern road surface, the fill of the bridge appeared to have been undisturbed since the 18th century. [Au(abr)] *SMR primary record number*: NYE 1967

KNARESBOROUGH BUS STATION, KNARESBOROUGH

Knaresborough Bus Station, Knaresborough, North Yorkshire: Archaeological Excavation

Archaeological Services WYAS Morley : Archaeological Services WYAS, 2003, 97pp, figs, tabs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological excavation and watching brief at Knaresborough Bus Station revealed a number of cut features including post holes and pits sealed by a 'garden' soil of later medieval and perhaps post-medieval date. These earlier features were probably medieval, although not all of them contained datable artefacts. The garden soil was presumably related to plots of land fronting the High Street and developed through the later medieval period and perhaps into the post-medieval period. During the 18th century the site was terraced for the construction of several buildings, fronting onto and to the rear of, High Street. [Au(abr)] *SMR primary record number:* NY1226, NY1

Work undertaken by: University of Durham, Archaeological Services

Most of the new foundation trench lay within the depth of the foundations to the earlier extension dating from 1963. Therefore archaeological remains were not disturbed. A small engineering test pit cut through these former foundations and exposed two silt layers. These may have been fills of the former town ditch, although too little was exposed to be certain of this conclusion. The foundations of the main theatre building comprise a 1m thick layer of sandstone rubble. This has been cut away by a modern sewer along the south-east side of the building. [Au(abr)]

The 2002 excavation recorded a well-built, stone-walled, rectangular building of medieval date (Building 1), floored with stone slabs, along with two successive exterior cobbled surface, and traces of another stone-walled building (Build 2). Both buildings were demolished in the late 15th or early 18th century, this period being contemporary with rubbish disposal represented a by a cluster of pits in the north-west of the site. Subsequent deposits indicated the dumping of large quantities of soil and rubble in the post-medieval period, followed by the construction of the Quaker's Meeting Hall and a later school in the 19th century. RIVER OUSE AT CAWOOD INGS AND KELLFIELD, NORTH YORKSHIRE

River Ouse at Cawood Ings and Kelfield, North Yorkshire

Blaise Vynner Leyburn : Blaise Vynner, 2002, 47pp, colour pls, figs, tabs, refs

Work undertaken by: Tees Archaeology

A watching brief was undertaken on the sites of works for the reconstruction of river flood defences at Cawood and Kelfield, North Yorkshire. The works at Cawood took place in an area where there was no evidence for settlement or other activity in the past. At Kelfield the work revealed a former field or property boundary and adjacent pit. Both contained pottery and other finds suggesting the nearby presence of medieval settlement activity. [Au] *SMR primary record number:* NYS 7038

WEST VIEW, MAIN STREET, WISTOW

West view, Main Street, Wistow **L Report on An Archaeological Watching Brief**

Palmer, F York : On Site Archaeology, 2002, 4pp, figs

Work undertaken by: On Site Archaeology

An archaeology watching brief was carried out in the garden at the rear of West View, Main Street, Wistow. A detached house and garage with driveway were to be built on the site by the owner of West View. The watching brief comprised the observation of the stripping of topsoil from the whole site and the digging of raft foundations for the house. The foundations for the garage were not observed. No features or finds were observed. [Au(adp)] *SMR primary record number:* NY890
