FRENHAM TO ALDERSHOT PIPELINE

A Report for RSK Environment Ltd on a Geophysical Survey Carried Out at Frensham-Aldershot Pipeline, Surrey

Mercer, E J F Woking : Surrey County Archaeological Unit, 2002, 138pp, figs

Work undertaken by: Surrey County Archaeological Unit

A gradiometer survey was carried out on the site. A number of cut features or ditches were identified along the proposed route of the pipeline together with probable relict field boundaries and possible pits, each of which indicated archaeological activity along the length of the survey. However, generally there was more evidence further south within the most southerly survey area, Area T, showing high archaeological potential. [Au]
