Brighton and Hove Archaeological Field Unit Brighton : Brighton and Hove Archaeological Field Unit, 2002, 1p

Work undertaken by: Brighton and Hove Archaeological Field Unit

A resistivity survey was carried out on the site. The BHAS Field Unit assisted the Worthing Archaeological Society in a survey to examine the location of a medieval tile kiln known from previous projects. The results show that an area of high resistance is located in the field and this is probably the location of the known kiln. A linear area of high resistance on the west-side of the field is a possible land drain. [Au(adp)]

WEST BURTON***Geophysics at West Burton, West Sussex 2002***

Funnell, J Brighton : Brighton and Hove Archaeological Field Unit, 2003, 4pp, figs

Work undertaken by: Brighton and Hove Archaeological Field Unit

The field unit conducted two resistivity surveys, one in March 2002 and a second in August 2002. The first survey concentrated on lands to the west and north of the church while the second survey examined earthworks in an area to the south west of the church. The first survey was suggestive of medieval house platforms and trackways. The second survey produced a similar pattern of linear features. The images contain a number of linear arrangements running in both east/west and south/north orientations. A number of rectangular areas can be observed and some form of pattern can be discerned. West Burton has produced geophysical evidence that may prove to be the location of a deserted medieval village associated with the church. [Au(adp)]
