BLACKHORSE LANE, EMERSON GREEN

Geophysical Survey on the Proposed Site of a Primary School at Blackhorse Lane, Emerson Green, Bristol

Noel, M J Consett : GeoQuest Associates, 2002, 10pp, figs

Work undertaken by: GeoQuest Associates

The gradiometer survey was carried out in advance of the proposed construction of a new primary school. A previous desk-based assessment had identified the area as one of moderate archaeological potential, and the survey mapped several significant subsoil anomalies. These anomalies were tentatively interpreted as ridge and furrow, and also a possible trackway. [Au(adp)]

HENBURY SCHOOL, MARISSAL ROAD, HENBURY

A Geophysical Survey of an Area of Proposed Development at Henbury School, Marissal Road, Henbury, Bristol

Noel, M J Consett : GeoQuest Associates, 2002, 12pp, figs, refs

Work undertaken by: GeoQuest Associates

The gradiometer results of the survey have corroborated the findings of a previous desk-based assessment, that the site was at one time divided into several rectangular fields. Ridge and furrow cultivation was suspected. A regular arrangement of ceramic land drains was also mapped beneath the central third of the study area. A possible Roman enclosure and soil-filled ditch of possible archaeological significance were also located. [Au(abr)]
