**BITTON CAMP**

*Bitton Camp, Gloucestershire*

Gaffney, C F Bradford : GSB Prospection, 2003, 13pp, figs, refs

*Work undertaken by:* GSB Prospection

The geophysical data collected revealed few anomalies of archaeological interest. The resistivity survey revealed no planned interior of the monument, while the magnetic survey suggested that the camp should be interpreted as part of a larger earthwork. Modern debris was also located. Taken as a whole, the data did not support the use of the site as a Roman camp. The earthworks were probably part of a larger structure, most likely agricultural in origin. [Au(abr)]

**CATTYBROOK BRICKWORKS, ALMONDSBURY**

*Geophysical Survey of a Proposed Clay Storage and Extraction Area at Cattybrook Brickworks, Almondsbury, South Gloucestershire*

Noel, M J Consett : GeoQuest Associates, 2002, 16pp, colour pls, figs, tabs

*Work undertaken by:* GeoQuest Associates

The gradiometer survey was carried out in response to proposals for a clay extraction and storage site. Evidence for truncated ridge and furrow was found, along with a trackway or boundary flanked by ditches. This feature corresponded with a raised earthwork seen on the ground. Other magnetic anomalies were observed but were not successfully interpreted due to low magnetic susceptibility contrasts. [Au(abr)]
