Oxford Archaeology Oxford : Oxford Archaeology, 2005, 63pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

In 2005 an evaluation and watching brief were carried out at the site. The evaluation identified a series of linear features running across the site including post-medieval boundary ditches and undated shallow gullies. A spread of burnt flint and several undated pits were also noted. The following watching brief comprised the monitoring of 17 geotechnical test pits. This exercise recorded a post-medieval ditch, a deposit and an undated ditch. An organic deposit was also noted at depth in two of the test pits. [Au(adp)]

Corbett, S & E Brighton: Brighton & Hove Archaeological Society Field Unit, 2005, 3pp, colour pls, figs

Work undertaken by: Brighton & Hove Archaeological Society Field Unit

The site had been spare ground for many years, and it was proposed to build a garage on it.

The vegetation had been removed already. The soil was removed over an area of 12.7x 10.5 metres.

The depth of soil varied from 1m at the rear of the plot to only a few centimetres along the wall at the pavement edge. Once the natural chalk was exposed, a change of texture and colour could be seen looking like a ditch. A section was cut through the ditch and it proved to be a modern soakaway. No other features were seen, nor were there any finds. [Au(abr)]

Cooke, N Salisbury : Wessex Archaeology, 2005, 78pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

A programme of archaeological recording and post-excavation work on an archaeological evaluation was undertaken by Channel 4's Time Team at Chenies Manor. The site was a Scheduled Ancient Monument (27145) and a Grade I Listed Building. The aim of the project was to ascertain the character, extent and degree of preservation of the archaeological remains at Chenies Manor. Geophysical survey was incorporated in to the work. Dendrochronological samples taken from the structural timbers of the surviving west range had precise felling dates ranging from spring 1537 to summer 1538. Eighteen trenches were excavated and revealed evidence for a phase of 12th and 13th century occupation on the Site, in the form of a number of features cut into the natural drift geology of the site. A number of other structural remains related to the Tudor manorial complex were also recorded. [Au(abr)]

CROSS LEVELS WAY, EASTBOURNE***Cross Levels Way, Eastbourne. A Watching Brief***

Clough, H Leeds : Scott Wilson, 2005, 32pp, figs, tabs

Work undertaken by: Scott Wilson

A desk-based assessment was undertaken in order to determine the potential for archaeological remains on the site known as Cross Levels Way, Eastbourne, East Sussex. The application area was approximately 2.6ha in size and was in use as arable farmland. The site consisted of a field, which was roughly rectangular in shape and aligned east-west to the north of Cross Levels Way. The proposed development comprised four office buildings and possibly a small lake. Car parking and a new road would also have been constructed. The evidence from the Historic Environment Records and previous work in the area suggested that there was a high potential for remains from the Bronze Age and a moderate to high potential for remains from other periods. Littledene, Littledene Lane, Beddingham. A Watching Brief

Chuter, G Lewes : Lewes Archaeological Group, 2005, 2pp, figs, tabs

Work undertaken by: Lewes Archaeological Group

An archaeological condition was placed on the planning permission for the development, as it lay adjacent to a known early Saxon inhumation cemetery and in close proximity to a Roman villa. The watching brief maintained during the groundwork associated with the construction of the garden building. This consisted of three foundation trenches 2.5m long, 0.25m wide and 0.5m deep. All showed a layer of topsoil (former ploughsoil) 0.2m deep containing 20th century brick/tile and pottery, characteristic of a manuring spread. Below the topsoil was a yellow/brown clay natural containing occasional sand nodules. None of the trenches revealed archaeological features, although trenches 2 and 3 cut through two shallow hollows containing flint nodules. These features were likely to be either former tree holes or natural periglacial features. [Au(adp)]

STABLES, LITTLEDENE, BEDDINGHAM

Stables, Littledene, Beddingham. A Watching Brief

Chuter, G Ditchling : Lewes Archaeological Group, 2005, 3pp, colour pls, figs, tabs

Work undertaken by: Lewes Archaeological Group

A watching brief was maintained during groundwork associated with the construction of a detached timber framed garage. The groundwork comprised of the excavation, by mechanical excavator, of a c.10m long, 1m wide, retaining wall foundation trench (T1) and a two structural wall foundation trenches c.10m long and 5m long (T2 & T3). T1 ran parallel to the present day track. A layer of metalling was exposed at the eastern end comprising of a thin (100mm) layer of chalk overlain by a thick (280mm) layer of brick fragments and cinder, in turn overlain by a thick (200mm) layer of gravelly topsoil. Below the metalling, a clay alluvial deposit was exposed. At the western end of the trench a small cinder layer was exposed, presumably also representing the remains of road metalling. T2 ran northwards from the western end of T1. At the northern end a brick filled soakaway was exposed. At the southern end a very vague cut was exposed, possibly representing a drainage gully associated with the track. The trench cut through a 0.75m thick alluvial deposit resting on natural chalk bedrock. T3, running eastward from the northern end of T2, exposed no archaeological features and again cut through a 0.75m thick layer of alluvial deposit resting on chalk. No archaeological artefacts were recovered from the trenches or spoil heap. The 1st, 2nd and 3rd edition Ordnance Survey maps

record the area of the development as being open fields, however, by the 1920s the track had come into existence and the bricks used in the metalling layer would support this date for this feature. The soakaway was also likely to have dated to this period or later. [Au(adp)]

6 East Gardens, Ditchling. A Watching Brief

Chuter, G Lewes : East Sussex County Council, 2005, 2pp, figs, tabs

Work undertaken by: East Sussex County Council

A watching brief was maintained during the drilling of geo-boreholes in advance of the construction of a new dwelling. All the boreholes revealed 15-20 cm of topsoil sitting on top of the clay natural. No archaeological features or artefacts were recorded. It was likely that this area was not occupied during the medieval and post-medieval period and was an empty area abutting the tenement plots that lined the High Street and East End Lane. An examination of the flower beds recorded only 20th century building debris, a period when this area of Ditchling was developed. [Au]

An Archaeological Watching Brief at Priory Cottage, Lewes, East Sussex

Butler, C Ditchling : Chris Butler Archaeological Services, 2005, 23pp, figs, tabs, refs

Work undertaken by: Chris Butler Archaeological Services

An archaeological watching brief was carried out in August 2005 during the construction of an extension at the side of Priory Cottage, Lewes, necessitated due to its location near the possible boundary wall of the demolished Medieval Cluniac Priory of St. Pancras. A number of medieval features were located during the watching brief, including two walls, one retaining a trace of a wooden sill beam, rubbish pits and the base of an oven or kiln. A large assemblage of medieval pottery, building materials and animal bone was recovered. The evidence suggested that one or more buildings, probably of a domestic nature, were located within the priory precinct during the 13th and 14th centuries. [Au(adp)]

Corbett, E & Corbett, S Brighton : Brighton & Hove Archaeological Society Field Unit, 2005, 4pp, colour pls, figs

Work undertaken by: Brighton & Hove Archaeological Society Field Unit

The site had been a bungalow, which had been demolished and the land cleared in order to build two new properties. Excavations were being carried out to allow floor and wall foundations to be laid. The trenches were 1m wide and 1m deep, organized in a rectangle 12.7m by 13.3m, and bisected on its long axis by another trench. There were various other trenches which were to be used for internal dividing walls for the properties. The trenches revealed various coloured unstratified sands, culminating in yellow clay at a depth of 1m, containing green areas, consistent with copper mineral deposits as no metal was detected. No archaeological features were revealed. The trenches also revealed the foundations of the original building. It was therefore likely that any archaeological features were destroyed when the original building was erected. Finds included 9 flint flakes (Late Neolithic/Early Bronze Age) and 11 fire-cracked flint weighing approximately 130g. The site was also littered with buried 20th century bottles, cans and broken pottery. [Au(abr)]

Russell, L Hastings : Hastings Area Archaeological Research Group, 2005, 4pp, colour pls, figs

Work undertaken by: Hastings Area Archaeological Research Group

On arrival, most of the foundation trenches had been excavated by hand. The trenches (1.3m in depth) were water logged to an approximate depth of between 6-10cms. The land behind the boundary fence (5m from the foundation trench) dropped away steeply onto pasture. The sections through the ground cut by the foundation trenches showed that the level of the land had been built up during the construction of the house. The sections showed redeposits of clay mixed with much modern building rubble: brick, roofing tile, discarded clumps of sand and cement plus lumps of gypsum. Builder's rubble could still be identified at the bottom of the trenches. There was an area of previous burning seen in the south-west corner of the foundation trenches. This was also recent and probably contemporary with construction of the house. Nothing of significance was found in the trenches. [Au(adp)]

PEPPERING EYE FARM, BATTLE***Peppering Eye Farm, Battle. A Watching Brief***

Chuter, G Lewes : East Sussex County Council, 2005, 3pp, colour pls, figs, tabs

Work undertaken by: East Sussex County Council

A watching brief was maintained during the groundwork associated with the erection of a single storey extension to Peppering Eye Farm (a 17th century farm with attached house). An archaeological condition was attached to the planning permission because the site lay within a 17th-19th century gunpowder mill site and a Romano-British ironworking site.

The area of the extension was found to have been heavily disturbed by a former barn (c. 20th century) and garden outbuildings. However, one small area of concentrated charcoal and iron slag was recorded, although this had been partially cut by the barn foundations and a drain. No artefacts were recovered from the charcoal spread and the topsoil was found to contain quantities of 18th-19th century brick and tile fragments. The iron slag was of a heavy type usually associated with Romano-British workings and it is likely that this feature was a truncated slag dump from a nearby furnace. [Au(adp)]

1, FRIARS CHARM, MAPLE WALK, COODEN***1, Friars Charm, Maple Walk, Cooden. A Watching Brief***

Austin, M Hastings : Hastings Area Archaeological Research Group, 2005, 3pp, figs

Work undertaken by: Hastings Area Archaeological Research Group

Following completion of the main building works, a service trench was excavated from the site boundary along the north side of the access road to Friars Charm terminating in a service chamber in Maple Walk. The service trench, which was about 50m long, was machine dug and was typically 750 deep and 600 wide. For most of the run of the trench the soils were similar to those encountered within the Friars Charm site i.e., a thin loam topsoil layer over sterile yellow/ochre sandy clay. For the last 15m the top soil over the clay natural became thicker with backfill material which brought the ground level up to that of Maple Walk. The loam topsoil and clay were archaeologically sterile and produced nothing of interest. The back fill material, which was a mixture of different soils and clays, produced small pieces of brick, glass, chinaware and pottery. All of it was modern and probably contemporary with the construction of Maple Walk. [Au(abr)]

Cornwell, K Hastings : Hastings Area Archaeological Research Group, 2005, 3pp, figs

Work undertaken by: Hastings Area Archaeological Research Group

The Hastings Area Archaeological Research Group was asked to undertake a Watching Brief as part of a planning condition. The development of a detached three bedroom house was in a prime location for possible medieval items, given its close proximity to the Saxon Manor of Barnhorn and Sandhurst Lane. On arrival on site, the foundation trenches had been recently excavated with easy access to all areas of the development. All of the trenches were investigated (approximately 1.3m depth) plus the spoil heap. The trench sections all showed natural sandy soil deposits at the lower levels and disturbed topsoil (15cm). The only exception to this was the Eastern trench which ran parallel to a recently constructed brick boundary wall and what appeared to be concrete footings running in a East-West direction approximately 1m from the Northern trench. The Cottage, Hogtrough Lane, Winchelsea. A Watching Brief

Cornwell, K Hastings : Hastings Area Archaeological Research Group, 2005, 3pp, figs

Work undertaken by: Hastings Area Archaeological Research Group

Planning permission was granted for the underpinning of the western corner of a cottage and the replacement of the single garage by the construction of a double garage.

Underpinning summary: An 'L' shaped trench about 7m long, 800cm wide and up to 1500cm maximum depth had been dug under the western corner of the cottage. Six separate pits were dug and concreted one at a time. Much of the excavated area was back fill material with nothing of interest, but they had also excavated what appeared to be undisturbed soil to the outside of the trench. This was a homogeneous mid-brown sandy soil and was likely to have been hill-wash. This area contained few finds. Garage summary: An area approximately 5m square had already been excavated when I attended and no finds were visible in the removed soil. The walls to the trench were investigated with a few finds recovered from the eastern section (this was also the section in the hill side and appeared to be undisturbed). The soil type was the same as in the underpinning area and it was not possible to specifically identify the topsoil layer. A small section of the original garage floor remained in the northern section. [Au(adp)]

A FIELD SURVEY OF BIRLING MANOR FARM, EAST DEAN, EAST SUSSEX.*A Field Survey of Birling Manor Farm, East Dean, East Sussex*

Chuter, G Lewes : East Sussex County Council, 2005, 80pp, colour pls, figs, tabs, refs

Work undertaken by: East Sussex County Council

Between February 2004 and February 2005 the author carried out an archaeological landscape survey, in conjunction with a metal detector survey, of the fields surrounding Birling Manor near East Dean. The retrieved assemblages revealed the location of seven new archaeological sites ranging in date from the late Bronze Age to the later medieval period. The richness and quantity of the metal finds suggests that Birling Manor was an important centre in the later Bronze Age, the late Iron Age/Romano-British period and the 12th-14th century AD. [Au]

LOWER NORTHBROOK FARM, TITNORE LANE, WORTHING***Lower Northbrook Farm, Titnore Lane, Worthing: an Archaeological Evaluation Report***

Sygrave, J

Ditchling : Archaeology South-East, 2005, 49pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

The archaeological evaluation consisted of 22 trenches. Archaeological features were recorded across the site dating from the Neolithic, Bronze Age, Romano-British, medieval and post-medieval periods. In the central west of the site a group of probable Neolithic pits were recorded, one of which contained a fragment of a polished stone axe. Late Bronze Age features were recorded surrounding several potential LBA structures/roundhouses in the south, centre and south east of the site. A near complete LBA bowl was also recovered from a ditch in the central east of the site. Features of Romano-British date were recorded in the south-east and included a partially truncated Roman pot and two ditches. Only two features of a medieval date were recorded, a ditch in the north-west and a pit in the central east. A single post-medieval pit was noted in the north. [Au(abr)]

GREYWELL ROAD, HATCH, BASINGSTOKE***Greywell Road, Hatch, Basingstoke, Hampshire. An Archaeological Excavation***

Oram, R Reading: Thames Valley Archaeological Services, 2005, 21pp, figs, tabs, refs

Work undertaken by: Thames Valley Archaeological Services

A new development on a site believed to have been on the line of a Roman road was preceded by a desk-based assessment and an evaluation. The evaluation did not convincingly locate the road, but did reveal a deposit of burnt flint that appeared to be a prehistoric burnt mound. A small excavation was planned to test the nature of this deposit and determine its context. Although a Roman ditch crossed the site on the projected line of the road, there was no sign of the road itself, and the flint was determined to have been the remains of a burnt mound. Pottery, flint work and radiocarbon dating converged to confirm that the mound was created in the Middle Bronze Age. [Au(adp)]

Jones, C Northampton : Northamptonshire Archaeology, 2005, 12pp, colour pls, figs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological recording action was carried out in respect to a cable trench, trench 43, related to the installation of new gates. The trench ran for 150m long the hedge line of the south paddock bordering Vyne Road. The remains of a brick culvert were revealed and, further north a brick platform stood adjacent to a gravel surface. The brickwork was broadly dated to the 17th-18th century, although a 17th century date was tentatively suggested for the brick platform. [Au(adp)]

Brading, R Southampton : Southern Archaeological Services, 2005, 9pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services

An archaeological watching brief was carried out during excavations for a garage and storeroom with associated soakaway and paving. Though the garden was originally a medieval plot, no evidence of medieval activity was recovered. The earliest dated context was a mixed 19th century infill layer that lay above a thin subsoil that in turn lay above natural gravel. The depth of the 19th century layers suggested infilling. Crockett, A Salisbury : Wessex Archaeology, 2005, 52pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The only significant remains exposed, comprised of three extensive deposits of pottery manufacturing waste and associated features and were all located within the Schedule Monument boundary. A small group of gullies, post holes and possible pits of late 1st or 2nd century AD date was recorded at the southern end of the gabion trench in Area 1. Area 2 comprised of a small group of irregular shallow features towards the north end of the gabion trench that were concluded to be tree-throws and/or natural hollows. The damaged remains of a pottery kiln were recorded beneath a previously known pottery wasters dump dated AD 270-280. [Au(abr)]

Work undertaken by: University of Southampton

This report documents the results of a research project carried out by students on an area thought to have contained archaeological evidence for a fish weir and associated structures. The project identified that there were three stages of construction and use of this site described as a 'lower fish weir', a 'higher fish weir' and 'middle basket trap structures'. The site contained preserved wattle and worked wood. The area was known to have been the site of a salt works and the fish traps could have been associated with this. Suggestions for future research on this site were made. [AIP]

Clark, A London : Museum of London Archaeology Service, 2005, 63pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

A watching brief was maintained during a programme of groundwork for a redevelopment. No significant archaeological features relating to the line of the Roman road were uncovered during the course of the watching brief. A total of 13 post-medieval plough furrows related to agricultural activity were recorded during surface stripping in the northern part of the site in Trenches 30 and 31. Two archaeological features interpreted as pits/dumps were recorded in Trench 47. Animal bone, pottery (dated to the 19th and 20th century) and ceramic building material were recovered from the fill of these, although the fill was heavily contaminated with diesel. Glass fragments and a flowerpot were recovered from the top of one of these features. Brick and concrete foundations uncovered across the site were thought to relate to WWII temporary structures. The concrete base of a suspected air raid shelter was exposed in Trench 48. The majority of the wall foundations uncovered were thought to have related to the school building which formerly occupied the site and dated to the 19th/20th century. [Au(adp)]

Summary Report on an Archaeological Watching Brief at Jacob's House, Stockbridge, Hampshire

Brading, R Southamton : Southern Archaeological Services, 2005, 14pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services

An archaeological watching brief was carried out during the excavation of foundation trenches, with associated drainage, for a two-storey building extension. The foundation trenches revealed a sequence of infill layers, alternately chalk with flint and clay. Only in a soakaway trench, at a depth of 1m, were natural deposits, in the form of a layer of peat encountered. The infill layers appeared from the finds to be 18th century at the earliest, perhaps associated with an 18th century extension. The peat may therefore have been the natural surface preceding the 18th century. [Au(abr)]

Brading, R Southampton : Southern Archaeological Services, 2005, 7pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services

An archaeological watching brief was carried out during site stripping for a new site compound near junction 10 on the M3. The stripped level across the bulk of the site was mainly within a subsoil that overlay chalk, and the latter was only exposed at the southern end of the site. After the stripping the area was covered by a membrane and a layer of hardcore, and therefore any archaeology below the

subsoil was left intact. Finds observed during a walkover included pottery, ceramic building material and glass, all of which were, at the earliest, 18th century in date. The quantity suggested no more than possible field marking or random losses. No archaeological features were observed. [Au(adp)]

Priestley-Bell, G Ditchling : Archaeology South-East, 2005, 10pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

A watching brief maintained during the excavation of a c. 60m long service trench revealed three significant archaeological features: i) a brick and timber culvert, ii) a timber revetment and iii) a narrow ditch. The culvert was probably associated with the establishment of the existing farm access track and perhaps dated to the 18th century. The revetment was perhaps earlier, and indicated the original extent of the existing pond which had been partially infilled when the farm track was built. The ditch produced significant quantities of very sooty unabraded pottery shreds of mid-14th to mid-15th century date, together with bone, and was almost certainly associated with nearby domestic settlement. Archaeological Watching Brief on Laying New Drains and Lightning Conductors at St. Andrew's Church, Meonstoke, Hampshire

Smith, M P Southampton : Southampton City Council Archaeology Unit, 2005, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

The natural chalk was not exposed during the watching brief. The earliest deposit exposed was a brownish soil horizon. A chalk dump was present in the vicinity of the chancel above the soil. It may have been a construction horizon. A feature of uncertain date and function cut the chalk dump. It may have been a grave but was overlain by a soil layer that was cut by all the other graves. A total of 14 graves were identified. Only small parts of each burial were exposed in the watching brief. All of the disturbed human bone was collected for reburial at the church. Two 19th century brick vaults were also found. A length of stone wall adjacent to the north aisle wall was of uncertain date. [Au(abr)]

Southern Archaeological Services Southampton : Southern Archaeological Services, 2005, 12pp, colour pls, figs, refs

Work undertaken by: Southern Archaeological Services

An archaeological watching brief was carried out during excavations for a summer-house. The site lay less than 20m inside the eastern wall of Roman Winchester. The excavations revealed a deep upper level of 19th century infill. Below this was a mixed layer which contained a mixture of pottery dating from the Roman to Post-Medieval periods. The exact nature of the layer was not certain, but may have contained material from the Roman rampart mixed with later material suggesting that this was the ground level from the Roman period to the 19th century. MINSTER HOUSE, WINCHESTER*An Archaeological Watching Brief at Minster House, Winchester*

Rushton, N Fair Oak : CKC Archaeology, 2005, 15pp, colour pls, figs, refs

Work undertaken by: CKC Archaeology

The stratigraphy of the new foundation trenches lacked the upper layers as reported in the evaluation due to previous soil and debris stripping. The upper layer within the new trenches was heavily disturbed with redeposited material. The clay layer was filled with large amounts of brick, 19th century ceramics and oyster shell. At a depth of between 0.75m and 0.8m across the whole site was another clay layer containing higher levels of chalk and small fragments of tile and charcoal flakes. This had collapsed in part on its south-west side and formed an almost regular circle. Also revealed were the remains of a possible medieval courtyard slab to the south of a modern brick wall. An Archaeological Watching Brief at 10 Cypress Rd., Newport, Isle of Wight

Currie, C Fair Oak : CKC Archaeology, 2005, 19pp, figs, refs

Work undertaken by: CKC Archaeology

A watching brief was carried out during groundwork for three dwellings. No archaeological features were found on this site despite the proximity of a Roman villa 80m to the northeast of the site. Local topography suggested that the site may have been partly stripped in the 20th century when the existing bungalow was built. The eastern part of the garden appeared to have been partly stripped in the 20th century when the existing bungalow was built. The eastern part of the garden appeared to have been terraced into the hillside, thus removing some of the archaeological stratigraphy. Despite this it was clear that there had been little activity here as there were no cut features of any sort in the undisturbed clay within the areas observed. Four pieces of prehistoric flint were found within the local subsoil, but this could only have been taken to indicate a vague presence, possibly in the Late Neolithic or Bronze Age periods. NEWPORT BUS STATION, NEWPORT

Newport Bus Station, Newport, Isle of Wight. An Enhanced Archaeological Watching Brief

WCA Heritage Isle of Wight : WCA Heritage, 2006, 33pp, figs, tabs, refs

Work undertaken by: WCA Heritage

An enhanced archaeological watching brief was undertaken during groundwork for a bus station. Three phases of works were monitored. Phase 1 comprised the final stages of demolition of the previous structure on the site, ground breaking, slab lifting and reduced dig across the site Phase 2 comprised machine excavation of 62 foundation pits in the south west and north area of the site. The third phase

of the watching brief comprised the monitoring of service trenches around the boundaries of the site. Regular archaeological monitoring of excavations was carried out. The subsoil and natural was inspected for archaeological features, with rapid recording and hand excavation of deposits where appropriate. Recorded features comprised post-medieval and 19th to 20th century features including 4 wells, a culvert and sinkhole, a cellar, surviving stone and brick walls possibly with 17th century origins, a brick lined pit and a domestic rubbish pit. An undated feature, possibly a pit, was also recorded. A feature of unknown extent or function was also recorded in the southern end of the site containing 4 sherds of possible medieval pottery. An undated buried soil layer was also identified in the south east of the development area. [Au(abr)]

BOWEN'S FIELD, VICTORIA PARK, SOUTH ASHFORD***An Archaeological Watching Brief at Bowen's Field, Victoria Park, South Ashford, Kent***

Willson, J Canterbury : Canterbury Archaeological Trust, 2005, 6pp, figs

Work undertaken by: Canterbury Archaeological Trust

Upon first visitation to the development site, it was found that most of the groundwork on the site had in fact, been in progress for some considerable time, in excess of a month, before any archaeological arrangements had been organised by the developer and that much of the work had been undertaken before planning approval had been received. Accordingly it was not possible to undertake monitoring on any useful scale apart from making some basic notes on the site in general and what available stratigraphy was visible in a very limited area. If, as it appeared, the site had been largely quarried in the past, then it was fairly certain that any archaeology that may have been present would have been lost at that time. Apart from a subsequent short visit to check on progress, no further visits to the site were deemed necessary and the watching brief ceased that day. [Au(abr)]

An Archaeological Watching Brief at Barton Court Grammar School, Longport, Canterbury, Kent
 Linklater, A Canterbury : Canterbury Archaeological Trust, 2005, 12pp, figs
Work undertaken by: Canterbury Archaeological Trust
 Despite the area of the new extension to the existing school only covering a relatively small area, the fact that elements of earlier occupation had been found during several separate archaeological projects across the school grounds meant the possibility of surviving archaeology was relatively high. Some evidence of previous agricultural activity was observed, sealing earlier medieval occupation deposits and features. Some features were related to four large pit type features within the site. Unfortunately at the time of this assessment the exact function of these features was uncertain, but clearly related to a period in the Grange Farms establishment and expansion during the late Saxon and early Norman periods. Chadwick, P & Dicks, S London : CgMs, 2005, 31pp, figs, refs

Work undertaken by: CgMs

An archaeological desk-based assessment was undertaken in advance of a proposal to construct a football ground. The site was thought to have had potential for prehistoric, particularly Late Bronze Age and Iron age, settlement evidence and historic sources suggested that a Saxon cemetery may have extended into the southern part of the site. Additionally, gravel deposits beneath the site had a potential to contain Palaeolithic artefactual evidence. [Au(abr)]

Admiralty Lookout, Dover Castle, Dover, Kent. A Watching Brief of Electricity Cable Trench and Archaeological Investigative Trenches

Found, B & Guinness, A Canterbury : Canterbury Archaeological Trust, 2006, 28pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

A watching brief was maintained on groundwork relating to the digging of new electricity cable trench and the excavation of five investigative trenches close to the Admiralty Lookout at Dover Castle. A number of nine walls were found relating to the former garrison hospital, constructed in the 19th century and demolished in the 1960's. As well as the remains of the hospital, a number of walls relating to the hard landscaping of the area between the garrison hospital and the hospital battery, and of the hospital battery itself, were found. Griffin, N & Priestley-Bell, G Ditchling : Archaeology South-East, 2005, 17pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

One evaluation trench excavated on the eastern extent of the site found no significant archaeology. A subsequent archaeological watching brief on the western side of the site revealed a sequence of deposition from at least the 15th century to the present day. The 15th century deposit was probably the result of stream cleaning and/or the further embanking of the stretch of the now Dover Road leading towards Newgate. A metalled hard-standing was also revealed, the last use of which probably dated from the 17th to early 18th centuries, after which it was allowed to become overgrown. [Au(abr)]

PORT COTTAGE, 26 UPPER STRAND STREET, SANDWICH***Report on a Watching Brief at Port Cottage, 26 Upper Strand Street, Sandwich***

Parfitt, K Canterbury : Canterbury Archaeological Trust, 2005, 5pp, figs

Work undertaken by: Canterbury Archaeological Trust

A watching brief was undertaken during the construction of a rear extension to an existing house. Stratified deposits were located behind the building. These deposits appeared to have represented a succession of clay floors relating to a building. The lack of datable finds was singularly unhelpful and from the available evidence it remained unclear whether the floors formed part of an outhouse or rear range associated with an early phase of the standing structure, or whether they belonged to an earlier building that occupied this site. STONAR CUT, A256 EAST KENT ACCESS PHASE 1C, RAMSGATE ROAD, SANDWICH

Stonar Cut, A256 East Kent Access Phase 1C, Ramsgate Road, Sandwich, Kent

Boast, E Broadstairs : Trust for Thanet Archaeology, 2005, 39pp, colour pls, figs .refs

Work undertaken by: Trust for Thanet Archaeology

The report contained the results of a photographic survey of the results of the standing structures associated with Stonar Cut. The Cut was constructed in 1776 near the site of a Salt Works, however extensive structural works were carried out nearby during the First World War. The features recorded appeared to have dated to the establishment of the Richborough Port and associated facilities between 1916 and 1918. The existing sluice system recorded may have dated to that period but had been adapted in more recent times to use as an electric motorised system. Remnants of retaining walls and timber pile structures consolidating the banks were observed in addition to debris from the recent redevelopment of the area. Further research was going to be carried out as part of an ongoing watching brief for a new road system which may have shed further light on the sequence of construction within the Stonar Cut. Interim Report on Excavations at Ringlemere Monument 1. (Trenches 6 and 6A)

Parfitt, K Canterbury : Canterbury Archaeological Trust, 2006, 12pp, figs

Work undertaken by: Canterbury Archaeological Trust

This excavation formed part of ongoing investigations of an area in Ringlemere that was the site of a gold cup found by a metal detector. Since the find, the area has been excavated yearly to explore the archaeology of the site. The 2005 excavations recorded Early Iron Age terracing, an Anglo-Saxon cemetery, a prehistoric barrow and ring ditch and various Neolithic features including hollows, pits, hearths and post holes. Finds included Grooved Ware pottery, tranchet axes of Mesolithic type and beaker sherds. [AIP]

HUSK (UK) LTD DEPOT, LYDDEN HILL, LYDDEN, DENTON

An Archaeological Watching Brief During the Groundworks Associated with the Construction of a New Office Building at Husk (UK) Ltd Depot, Lydden Hill, Lydden, Denton, Kent

Linklater, A Canterbury : Canterbury Archaeological Trust, 2005, 5pp, figs

Work undertaken by: Canterbury Archaeological Trust

An archaeological watching brief was undertaken during the construction of a new office building. No archaeological remains pre-dating the mid 20th century were encountered during the watching brief.

The position of the depot abutting the north-east side of the Dover-Canterbury Roman Road meant that any further development within its vicinity will have to be subject to close archaeological monitoring. It was thought that the possibility of both contemporary settlement and burials being situated beside the road or the location of prehistoric flint implements, of which numerous quantities had been retrieved from the surrounding landscape. 4-5 TOWN PIER, GRAVESEND

An Archaeological Watching Brief Associated with the Excavation of Two Test Pits Prior to Test Boreholes in Advance of Piling at 4-5 Town Pier, Gravesend, Kent

Linklater, A Canterbury : Canterbury Archaeological Trust, 2005, 15pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological watching brief was undertaken during groundwork in advance of piling that was carried out. Unfortunately, due to the excavation of deep cellars through soils consisting largely of either natural subsoil, or material derived from the infilling behind timber revetments to stabilise the foreshore during the mid 19th century, no archaeological features or deposits survived. Pottery, glass and wall tile fragments of mid 19th to early 20th century date suggested the revetments were of a relatively recent date. [Au(abr)]

Canterbury Archaeological Trust Canterbury : Canterbury Archaeological Trust, 2005, 5pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

A watching brief was carried out during groundwork for a residential development. The watching brief produced nothing of archaeological significance. The lack of artefact evidence and man-made features appeared to have been total, other than that of wartime damage, but the evidence from the previous project in the area showed that it should not have been regarded as typical. The lack of features of archaeological significance may have been due to the great amount of disturbance that had taken place due to the construction of buildings related to the airfield and air raids of the period. It was highly likely, however, that other areas in the vicinity may well have shown evidence of occupation and use. [Au(adp)]

Willson, J Canterbury : Canterbury Archaeological Trust, 2005, 7pp, figs

Work undertaken by: Canterbury Archaeological Trust

An archaeological watching brief was undertaken during groundwork. Although the site was thought to have had archaeological potential, the watching brief produced nothing of an archaeological nature in the areas exposed during excavation operations on-site. It did seem that the site had been cleared and only roughly levelled during the late 19th or early 20th century prior to the building of Orchard Cottage. Similarly, no artefacts were recovered from the site as a whole. It was recommended that any further development in this general area should be subjected to archaeological coverage as clearly this fell within an area generally rich in archaeological potential. LAND AT CLAXFIELD FARM, LYNSTEAD LANE, LYNSTED***Archaeological Investigations in Advance of and During the Extraction of Brickearth on Land at Claxfield Farm, Lynstead Lane, Lynsted, Kent***

Shand, G Canterbury : Canterbury Archaeological Trust, 2005, 23pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

A two-stage archaeological investigation was carried out on land destined for brickearth extraction. The site lay a short distance south of the main London to Canterbury Roman road. Roman and medieval remains had been found a short distance to the west. Important Mesolithic and Palaeolithic remains had also been found within brickearth deposits a short distance to the west of Bapchild. The first stage of archaeological fieldwork was a strip and map investigation of the site. At this stage only the topsoil was removed to expose the brickearth. A small circular hearth/fire-pit of undetermined date and three separate animal burials of probable recent date were encountered during this stage of the works. The second stage of the archaeological works was an intermittent watching brief of the extraction of the brickearth. No evidence of archaeological features, deposits or artefacts was observed during this investigation. [Au(abr)]

Oxford Archaeology Oxford : Oxford Archaeology , 2005, 35pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

An excavation was carried out in advance of a proposed retail park. Three phases of activity were revealed. A cluster of early Neolithic pits occurred in the southern part of the excavated area, producing small amounts of pottery and worked flint. This pit cluster was overlain by a field system of probable later Bronze Age date. The latest activity consisted of an enclosure system belonging to the late Iron Age/early Roman period. Undated features included an un-urned cremation burial and two posthole alignments. [Au(abr)]

CHATHAM HOUSE GRAMMAR SCHOOL, RAMSGATE***Formation of gate opening between Chatham House School and St. George's Church, Chatham House Grammar School, Ramsgate, Kent. Watching Brief Assessment Report***

Gardner, O Broadstairs : Trust for Thanet Archaeology, 2005, 8pp, figs, refs

Work undertaken by: Trust for Thanet Archaeology

A watching brief was undertaken during groundwork for a gate and pathway. The only area that revealed any features was the new pathway through the churchyard, and all of these features were graves or the foundations of monumental structures probably of a mid 19th century date. Although the results of the watching brief told little about burial practices in the mid-late 19th century they did reveal something about the way burials were treated in the mid 20th century. Many of the graves dated from the 1880s, yet only 60 years later the churchyard was cleared and levelled to create a park. Although most of the gravestones were relocated to the edge of the churchyard it was clear that this was done rapidly with the upper structures being removed and the graves and inhumations left in place. There were many fragments of grave stone, some quite large, buried below the surface as well as the grave

structures which suggested that the main concern of the workmen was the clearance and levelling of the churchyard rather than the careful removal and resetting of the gravestones and structures. Should any further construction work be carried out within the churchyard it was very likely that further graves from the original cemetery would have been disturbed. [Au(adp)]

82 SWALLOW ROAD, LARKFIELD, AYLESFORD, KENT
82 Swallow Road, Larkfield, Aylesford, Kent. Borough of Tonbridge & Malling. An Archaeological Watching Brief

Compass Archaeology London : Compass Archaeology, 2005, 11pp, colour pls, figs, refs
Work undertaken by: Compass Archaeology

An archaeological watching brief took place on the site of a conservatory extension to an existing house. The site lay just to the north of a Roman cremation cemetery that was discovered in 1892. The area also had some potential for prehistoric remains, although it was outside the later settlement and was not built on until the 20th century. A few 19th or 20th century potsherds and fragments of ceramic building material were noted within the soil profile, reflecting the previous cultivation of the site as well as the more recent housing development. There were no other remains with the exception of the base of a locally produced Roman coarseware pedestal jar or beaker. This was found residually in the post-medieval soil, and may have been transported some distance by agricultural activity. The underlying natural deposits were superficially disturbed by root action but otherwise quite sterile. [Au(abr)]

Shand, G Canterbury : Canterbury Archaeological Trust, 2006, 15pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

A watching brief was carried out prior to a proposed development. During extensive and deep excavations connected with the development, two subterranean tunnels were exposed. Limited observations putatively dated these to between WWI and WWII. This was perhaps, not unsurprising, as at this time, the area was under military ownership. Two other large soil-filled features were recorded in newly cut sections that bounded the south area of the site. [Au(adp)]

FORMER CIVIL SERVICE SPORTS GROUND, WILL ADAMS WAY, WATLING STREET, GILLINGHAM***An Archaeological Watching Brief During the Erection of a Health and Fitness Club at the Former Civil Service Sports Ground, Will Adams Way, Watling Street, Gillingham, Kent***

Willson, J Canterbury : Canterbury Archaeological Trust, 2005, 13pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

Although the site was thought to have had archaeological potential, the watching brief produced nothing of an archaeological nature other than a backfilled denehole, probably of post-medieval date, that was too dangerous to enter to have been recorded. Other than that, it seemed that the site had been cleared and largely levelled to some extent sometime during the 20th century to form a level sports field. It was recommended that any further development in this general area should be subjected to archaeological coverage as the surrounding area had good archaeological potential. [Au(adp)]

Helm, R Canterbury : Canterbury Archaeological Trust, 2005, 39pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation was undertaken in advance of a proposed residential development. Twelve trenches were excavated representing a 3.6% sample of the proposed development area. The surrounding area of the site, had produced evidence of prehistoric, Romano-British and Anglo-Saxon archaeology. The evaluation confirmed the survival of comparable archaeological features within the site. The earliest archaeological features consisted of two pits attributed to the later prehistoric period located in Trench 1 and 9 respectively and a small residual scatter of prehistoric worked flints. A possible Romano-British ditch, likely to have been part of a field system or enclosure, located to the north, was recorded in Trench 1. A kiln or oven base, was exposed in Trench 2 and tentatively dated to the Anglo-Saxon period. Early medieval features included pits, with in situ burning, located in Trenches 7 and 8, a possible east-west aligned ditch located in Trench 9 and a possible lined cess or refuse pit located in Trench 10. Evidence continued into the late medieval period, features consisting of a north-west to south-east aligned ditch was located in Trench 8 and two refuse pits were found in Trench 11. Post-medieval activity was represented by three refuse pits, located in Trenches 10 and 12, fronting Church Street to the east, and a series of metalled surfaces identified in Trenches 5, 6 and 7 to the west. The metalling represented part of a track or yard surface. Dating evidence indicated that these surfaces were contemporary with buildings shown on the 1870 Ordnance Survey map fronting its north and south. [Au(adp)]

RENNY LODGE, NEWPORT PAGNELL

Renny Lodge, Newport Pagnell, Milton Keynes. Fieldwork Assessment Report

Appleton, C Salisbury : Wessex Archaeology, 2006, 56pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

A programme of archaeological investigation was undertaken in advance of a development. Excavation of the site identified at least three phases of Late Iron Age/Romano-British activity on the site, as well as medieval archaeology and pre-Renny Lodge post-medieval features. Two phases of Romano-British activity were identified including enclosures, ditches, field systems, a road, and associated finds. The medieval phase of development on the site predominantly comprised field system ditches including a double-ditched arrangement and associated finds. Although limited evidence for post-medieval activity was recorded that pre-dated the construction of a workhouse at Renny Lodge in c.1836, the archaeology of this period was dominated by the development and expansion of the workhouse, which admitted its first inmates in 1837. Work undertaken by: John Moore Heritage Services

An excavation at the site revealed five phases of activity. A Bronze Age boundary ditch, orientated east-west and containing pottery indicative of a nearby settlement, was encountered. The second phase consisted of an Iron Age boundary ditch enclosing heavily truncated smaller enclosures. This was overlain by a medieval field or paddock system of narrow north-south orientated plots dating to the 12th and 13th centuries, into a fourth phase of larger east-west aligned strip fields. Post-medieval remains were scarce and comprised the corner of an 18th century field truncated by a 19th century rubble drain. [Au(abr)]

Moore, JBeckley : John Moore Heritage Services, 2005, 8pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

A watching brief conducted during the excavation of sewerage trenches through the moat of a medieval moated site and associated fishpond encountered fills of these features, with well-preserved organic material in the deeper waterlogged deposits. The settlement was dated to at least the 13th century, with the fishponds seen as later additions due to the recovery of later medieval pottery from the associated bank material. The negative earthworks were well preserved with the original moat protected by 18th-19th century partial infilling. There were indications that the lower foundations of buildings may have survived on the platform. [Au(abr)]

VINE COTTAGES, BICESTER*An Archaeological Watching Brief at Vine Cottages, Causeway, Bicester, Oxfordshire*

Moore, JBeckley : John Moore Heritage Services, 2005, 11pp, figs, refs

Work undertaken by: John Moore Heritage Services

A watching brief was carried out during the development of the area. A late 11th century pit was found under the south part of Vine Cottages and probably indicated the eastern limit of the medieval settlement of King's End. This area was subsequently cultivated in the 12th to early/mid 13th century, and continued in use until no later than the mid 14th century. The east-west range of Vine Cottages respected this boundary. Slightly further north the limit of properties fronting the Causeway on the west of the site was discovered, marked by a change in cultivation and a wall. 17th century ground make up and the foundations from the recently demolished cottage were also encountered. Gilbert, D Beckley : John Moore Heritage Services, 2005, 42pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

A watching brief and excavation were carried out at the site. Although heavy truncation by modern activity had occurred, significant archaeological deposits were located. The long-lived site probably started as an enclosed settlement towards the end of the Iron Age and continued later than this, represented by contemporary pit clusters and post holes. Its location suggested a defensive function as well as occupational use. The last use of the site was as a cemetery in the late Roman period. [Au(abr)]

ASHMOLEAN MUSEUM, OXFORD***Ashmolean Museum, Oxford. Archaeological Watching Brief Report***

Norton, A Oxford : Oxford Archaeology , 2005, 24pp, figs, tabs, refs

Work undertaken by: Oxford Archaeological Associates

A watching brief was carried out during the construction of an extension to the building. A large possible medieval pit was seen and several wall footings were identified inside test pits, including a possible cellar wall. Much of the area had been disturbed by services and construction work. [Au(abr)]

Report on an Archaeological Watching Brief at 5 Lion Street, Portsea, Portsmouth, Hampshire

Brading, R Southampton : Southern Archaeological Services, 2005, 12pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services

An archaeological watching brief was carried out during groundwork for a three-storey block of flats. The area was developed for housing in the mid-19th century but immediately previous to the present development, was occupied, in part, by a 20th century workshop. Cartographic evidence revealed that until the early to mid-19th century, the site lay within an inlet of a large tidal pond known as 'The Mill Pond'. The irregular road layout of the immediate area was due to the fact that it pre-dated the infill of 'The Mill Pond' and followed the shape of its perimeter. The presence of early modern infill across the whole site, overlying tidal mud, confirmed the location of the site within the pond. No solid geology was observed. [Au(adp)]

EAST SIDE PLAZA, GUNWHARF QUAYS

East Side Plaza, Gunwharf Quays, Portsmouth: Report on Archaeological Watching Brief

Keyte, J Southampton : Gifford & Partners, 2005, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Gifford & Partners

The archaeological watching brief identified that the Mill Pond Wall and the associated rampart survived surprisingly well beneath the present ground surface. While few finds were recovered during the watching brief, the mortar round and the elm pipe provide an interesting glimpse of past activity on the site. The survival of extensive sections of the Mill Pond Wall beneath the existing ground surface indicated that future development in the vicinity of the East Side Plaza site, especially Ordnance Row. MacDonanld & Rushton, N Fair Oak : CKC Archaeology, 2005, 21pp, figs, tabs, refs

Work undertaken by: CKC Archaeology

Observations made during the ground works at the Portsmouth Grammar School site showed that the remains of the Borough Gaol and the Clarence Barracks lay under this area. Deep thick walls associated with the prison complex were found along the western end of the site in Trenches 1, 14 and 17 and along the eastern boundary north of the building to be extended in Trench 4. Shallower walls and some of the concrete layers found along the northern edge of the building to be extended were associated with later building of the Clarence barracks. [Au(abr)]

24-26 EAST STREET, READING***24-26 East Street, Reading. Archaeological Watching Brief***

Foundations Archaeology Swindon : Foundations Archaeology, 2005, 9pp, refs

Work undertaken by: Foundations Archaeology

A watching brief followed an earlier evaluation and identified a number of parallel ditches, some of which were of a substantial size and thought to be defensive in nature. It was likely that the site contained a series of medieval property boundaries as well as part of the Civil War defences. A 17th century pit was also identified. All features had been severely truncated by modern development. [Au(abr)]

FORBURY GARDENS RESTORATION PROJECT II***Forbury Gardens Restoration Project, Reading, Berkshire. Archaeological Investigations***

Birbeck, V Salisbury : Wessex Archaeology, 2005, 31pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological investigation was undertaken during the course of restoration work at the site. Short lengths of walls or wall foundations were encountered in several deep soak-away trenches; the locations and/or depth of these trenches were modified to preserve the walls in situ. The most significant trench excavated, in terms of exposing the medieval Abbey remains, was the small trench excavated below the Cloister Arch. This exposed parts of the original masonry facing and decorative stonework (pilasters) of this important route between the Nave of the Church and the Cloisters. A small area of decorated medieval tiled floor also survived, as did the remains of two subsequent plain tile floors laid directly above. A medieval mortar floor, probably that of a cellar or undercroft was recorded in the Dormitory. The construction of the new Park Keepers Lodge in the south of Forbury Gardens exposed a length of well-built masonry wall along with associated and earlier surfaces and possible buried topsoil deposits. Molloy, T Southampton : Southern Archaeological Services, 2005, 16pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services

An archaeological watching brief was carried out during groundwork for a residential development. Two features, one undated, the other modern, were recorded during the work. The undated feature appeared to cut the natural gravel and may have been of some antiquity. The overall absence of archaeological activity over a large development site suggested a general low level of sustained human activity in the area. The site layers associated with human activity were represented by a sandy clay loam above natural deposits. This contained few inclusions and was relatively undisturbed and perhaps represented a garden soil. Overlying deposits were modern. A number of deep concrete vaults had been built into the embankment at the south-west corner of the site, overlooking the railway, thus removing any evidence of the waterside deposits that may have once been present. Two brick-lined mid to late 19th century wells were uncovered in the north-west corner of the site. No finds were recovered from the site. [Au(adp)]

Garner, M & Smith, M Southampton : Southampton City Council Archaeology Unit, 2005, 13pp, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

An archaeological watching brief was carried out on groundwork for the construction of blocks of flats with associated parking. Much of the site had been destroyed by a gravel pit shown on the 1868 series Ordnance Survey map. However, undisturbed deposits survived on the edges of the site. A possible burnt mound may have been a prehistoric cooking mound, or even a primitive sauna, but no secure dating evidence was recovered from it. An area of buried soil horizon of uncertain date overlay the possible mound. A linear feature may have been a field ditch or hedge base of probable post-medieval date. (Au(abr))

Raghill Farm, Aldermaston, West Berkshire. Initial Statement of Results: Phase 2b

Dinwiddy, M & Manning, A Salisbury : Wessex Archaeology, 2005, 12pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological strip and record works was undertaken ahead of quarrying. The fieldwork identified two late 17th/early 18th century brick updraught kilns, located at the eastern edge of the stripped area. One of the kilns was in a relatively good condition, while the second kiln had been largely robbed. A large post-medieval field boundary, orientated northeast/southwest was also uncovered, which ran along the eastern extent of the proposed extraction area. This boundary had already been previously traced and investigated in other strip and record areas (Phase 1 and 2a). Within the Phase 2b area, this boundary was associated with a second parallel ditch, which together formed a narrow trackway, which may have been associated with the kilns. Within the remainder of the area, no evidence of archaeological activity was identified. [Au(adp)]

Raghill Farm, Aldermaston, West Berkshire. Initial Statement of Results: Phase 3a

Dinwiddy, M & Manning, A Salisbury : Wessex Archaeology, 2005, 12pp, figs, refs

Work undertaken by: Wessex Archaeology

An archaeological strip and record investigation was undertaken in advance of quarrying. This report covered the results of archaeological fieldwork in the southern half of the Phase 3 area and was part of an ongoing programme of archaeological fieldwork. This phase of fieldwork had identified archaeological evidence for multi-period activity. This activity consisted of 29 features, dating to the Romano-British to post-medieval periods and consisted of field/enclosure ditches, trackways and postholes. These features were located on the fringes of the plateau, which occupied the northern part

of the Raghill Farm quarry site and strongly suggested that the plateau was likely to have a high potential for further archaeological remains. [Au(adp)]

Clelland, S Salisbury : Wessex Archaeology, 2005, 11pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological watching brief was undertaken during experimental drain testing. The fieldwork comprised the excavation of five 'recharge' trenches in an area previously subjected to archaeological evaluation, which had identified flint scatters of Mesolithic date in close proximity to the proposed trenches. During the course of the watching brief, no archaeological features, deposits or artefact scatters were recorded during the excavation of any of the five trenches or an additional sondage. The sequence of peat and alluvial deposits were recorded and was found to conform closely with the sedimentological sequence previously recorded during the earlier archaeological evaluation. Work undertaken by: Archaeology South-East

Archaeological excavation was undertaken at the site in order to identify and record archaeological remains in danger of destruction during the proposed rebuilding of part of the historic structure demolished during the 1970s. Stone footing of this structure were identified despite considerable modern truncation/landscaping. A range of artefacts were recovered during the work including prehistoric flint work and medieval pottery, but the largest assemblage dated from the post-medieval period and included pottery, clay pipe, tile, metalwork, glass and coins (including a late 17th-18th century Spanish piece).
