CATHERDRAL GREEN, DERBY

Archaeological Desk-based Assessment of Land at Cathedral Green, Derby, Derbyshire

May, R. Sheffield : ARCUS, 2007, 56pp, colour pls, figs, tabs, refs, CD

Work undertaken by: ARCUS

A desk-based assessment was carried out on an area of public open space adjacent to the River Derwent, in advance of re-landscaping of the park. The site lay within the Derby City Centre Conservation Area and the buffer zone of the Derwent Valley WHS. The potential for the preservation of prehistoric to Roman remains was low, as the site was low-lying and subject to flooding prior to the 16th century. The site appeared to be on the outskirts of the medieval town, and as such probably escaped heavy occupation during that period. Tofts were recorded at the end of the 16th century, and the street frontage had been developed by 1610, with houses shown on Speed's map. The rear of the properties was occupied by gardens or burgage plots stretching down to the river. Most of the houses appeared to have been rebuilt in the 18th century, including the Duke of Devonshire's almshouses, founded in 1599 opposite the cathedral and rebuilt in 1774. The long, un-powered doubling shop for Lombe's silk mill was built at the east side of the site in 1721-24. The building contained three floors of doubler's workshops, with a taller two-storey compting house at the north end. A brew house was located in the cellar of the compting house in the 18th century. The mill continued in use throughout the 18th and 19th centuries, with the doubling shop collapsing in the 1890s due to rotting of the wooden piles on which it was constructed. The Corporation Baths were constructed towards the south end of the site in 1856, and a terrace of houses had been laid out at right angles to Full Street, north of the almshouses, by 1852. Further houses were built on the south side of Silk Mill Lane between 1883 and 1901. The Corporation bought most of the Full Street property in the late 19th/early 20th centuries to accommodate the construction of an extension of the Electricity Power Station built to the north of Silk Mill Lane in 1894. The almshouses and the properties to the north and east were demolished between 1908 and 1914, for the power station extension. The Corporation Baths were demolished c.1932. The power station was closed in 1969 and demolished in 1972. The site was converted into a park, known as Cathedral Green, and the mill race was filled in. The proposed development had the potential to impact on buried deposits, particularly at the west side and on the site of the former mill race and mill island. It was considered likely that the construction of the power station and subsequent landscaping was likely to have damaged much of the subsurface archaeology in these areas, although there was the potential for the survival of remains associated with the doubling shop and housing in less disturbed areas. Further archaeological evaluation, such as test pits or trial trenches, would be required to assess the extent of disturbance caused by the 20th-century development. [Au(adp)]

LAND FRONTING BOLD LANE AND ST. MARY'S GATE, DERBY

An Archaeological Desk-based Assessment of Land fronting Bold Lane and St. Mary's Gate, Derby

Pre-Construct Archaeology Ltd Durham : Pre-Construct Archaeology Ltd., 2007, 82pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

The report consisted of an updated version of the 2006 assessment. The site was thought to have been located in the historic centre of Derby. Various religious complexes of Saxon date surrounded the study area, suggesting that it was situated in or near a major centre of Saxon activity. Late post-medieval development at the site would have had a detrimental impact on any earlier deposits. However, it was

not thought that all the buildings constructed would have had deep foundations or basements, and as a result some earlier archaeological remains may have suffered less damage than others. Overall, the potential for the survival of prehistoric remains was low, for Saxon and Viking remains moderate, and for the medieval and post-medieval periods the potential was high. [Au(adp)]

HOLMLEIGH WAY, CHELLASTON

Archaeological Desk-based Assessment. Land off Holmleigh Way, Chellaston, Derby

Baker, S Sheffield : ARCUS, 2007, 26pp, colour pls, figs, refs

Work undertaken by: ARCUS

In July 2007, an archaeological desk-based assessment was carried out on land adjoining Holmleigh Way. The assessment was required to accompany an outline planning application for the mixed use development of the site for offices and residential units. The site was a former arable field in set-aside, and was bordered by Cuttle Brook to the west. No previous archaeological investigation had been carried out, and no archaeological sites or findspots were known from the proposed development area. The presence of significant prehistoric activity west of the site at Swarkestone Lows (extending within 200m of the site boundary), and possibly also east of the site at Chellaston Hill, suggested that prehistoric activity may have been present within the site area. The majority of the site was used as a compound during construction of the A50, and was subject to intensive subsoiling during reinstatement. This was likely to have had a severe negative impact on buried archaeology. The western part of the site, adjacent to Cuttle Brook, was, however, not impacted by this process. Boreholes and test-pitting on the other side of the Brook, in advance of construction of the A50, suggested that deposits of palaeoenvironmental significance were present, and it was possible that similar deposits were present east of the Brook within the site area. Further archaeological evaluation, perhaps comprising auger survey, was therefore recommended to determine the presence/absence, preservation and potential of palaeoenvironmental deposits in the vicinity of Cuttle Brook. CASTLE FARM, CASTLE LANE, CODNOR PARK

An Archaeological Desk-based Assessment of Castle Farm, Castle Lane, Codnor Park, Derbyshire

Richards, G & Hunt, L Leicester : University of Leicester Archaeological Services, 2007, 18pp, colour pls, figs, refs

Work undertaken by: University of Leicester Archaeological Services

The assessment demonstrated that the site had a high potential for the discovery of archaeological remains. The site lay close to the remains of Codnor Castle, and the adjacent farmhouse contained stone that had been reused from the castle itself. The farm buildings included in the assessment were contained within an area that was once likely to have been located within the curtain of the castle itself. Some of these buildings also contained stone that may have once been the fabric of the castle or may have replaced earlier buildings on the site. [Au(adp)]

VAN DYK HOTEL AND GARDEN CENTRE

An Archaeological Desk-based Survey. The Van Dyk Hotel and Garden Centre, Clowne, Derbyshire
Scurfield, C Barnsley : CS Archaeology, 2007, paper with spiral binding with a picture of Southgate House c. 1920

Work undertaken by: CS Archaeology

1.1 This report assesses the archaeological resource and the potential of the Proposed Development Area (PDA) which consists of the Van Dyk Hotel to the eastern half and a Garden Centre to the western half. The PDA consists of a rectangular plot of land which abutts the A619 Chesterfield to Worksop Road. 1.2 Within the PDA there is a Grade II Listed Building, the Van Dyk Hotel, formerly known as Southgate House. This was home to the Bowdon family during the late 18th to 20th centuries. This assessment has revealed the nature and extent of Southgate House which was built on the site of an earlier house. The archaeological resource therefore includes an early 19th century house and gardens but may also contain settlement features from the Iron Age/Romano-British period. [OASIS(Au)]

EAST MIDLANDS DESIGNER OUTLET, SOUTH NORMANTON

An Archaeological Impact Appraisal of a Proposed Wind Turbine at East Midlands Designer Outlet, South Normanton, Derbyshire

Trent & Peak Archaeological Unit Nottingham : Trent & Peak Archaeological Unit, 2007, 14pp, figs, refs

Work undertaken by: Trent & Peak Archaeological Unit

The documentary records indicated that the general area was once part of both Fulwood Forest and Sherwood Forest, the western boundary of which moved over time. There was no evidence for archaeological remains within several hundred metres of the development area, and the site was farmland up until the 19th century. The arrival of a colliery and a spoil heap in the 19th century would have almost certainly destroyed any archaeological remains. No further archaeological work was recommended. [Au(adp)]

BRADWELL

Archaeological Desk-based Assessment of Bradwell Masterplan, Derbyshire

Stenton, M Sheffield : ARCUS, 2007, 47pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The desk-based assessment indicated that the proposal area was located within an area of extensive prehistoric, Roman, and early medieval activity. While the construction of the Newburgh Engineering Works was likely to have impacted upon subsurface archaeological deposits in that area, two Neolithic axes were recovered from the field to the east of the works. This area did not appear to have been landscaped extensively and may thus have retained the potential for the survival of previously unknown subsurface archaeological deposits. Cartographic evidence indicated that several detached properties were located along the site's western and southern boundaries in 1767, 1819 and 1844. A number of these properties, including the Newburgh Craft Supplies shop, Newburgh Hall and Bridge Cottage, remained standing. These buildings were located within the Bradwell (Village) Conservation Area. The sites of the now demolished historic buildings had remained largely undeveloped and it was possible that subsurface archaeological deposits may have survived at these locations. [Au(adp)]

LAND AT HALL FARM, MAIN STREET, GUMLEY
An Archaeological Desk-based Assessment for Land at Hall Farm, Main Street, Gumley, Leicestershire
 Hunt, L Leicester : University of Leicester Archaeological Services, 2007, 26pp, colour pls, figs, tabs, refs
Work undertaken by: University of Leicester Archaeological Services
 The farmhouse at the site dated from the 18th century and was Grade II Listed. The site was also in close proximity to a Scheduled Ancient Monument associated with the Deserted Medieval Settlement at Gumley. Previous development relating to earlier buildings such as the farmhouse and stables had been recorded. There was thought to be a low potential for remains of the prehistoric and Roman periods to be recovered, and a moderate potential for later periods. [Au(adp)]

RSK Environment Ltd Helsby : RSK Environment Ltd, 2007, 116pp, colour pls, figs, tabs, refs

Work undertaken by: RSK Environment Ltd

An assessment was carried out in response to proposals to redevelop the site. There were very few known prehistoric or Roman sites within the study area, with any that may be present deeply buried under an alluvial layer. It was thought that the street layout of Boston was thought to follow the River Witham, and the earliest settlement in the area seemed to have been located in the area occupied by Town Bridge. Little was known about the development site itself, with no formal archaeological investigation carried out. There was thought to be a high potential for the recovery of archaeological material from the 19th century. [Au(adp)]

University of Durham, Archaeological Services Durham : University of Durham, Archaeological Services, 2007, 34pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

Stonebridge House was a Grade II Listed Building dating to the 19th century. A number of other buildings within a 500m radius of the site were also Grade II Listed Buildings. The other structures on site were of 19th and 20th century date. There were no Scheduled Ancient Monuments within a 500m radius of the proposed development. There were no indications that the proposed development area was occupied prior to the mid-19th century. The 1841 tithe map indicated that the area east of the river Witham was composed of large, enclosed fields. The tithe apportionment indicated that at that time the map was drawn up, the vast majority of these fields were used for pasture. The proposed development had the potential to impact upon any archaeological resource through the construction of foundations and associated services. There were no indications that the site was occupied before enclosure in the mid-19th century, however, the relatively undeveloped nature of the site was thought to hold potential for well-preserved remains where any might have survived. Some Listed Buildings were noted within the study area. A programme of trial trenching was recommended to mitigate against the possibility of encountering archaeological remains. [Au(adp)]

THE OLD RECTORY, BARNWELL

The Old Rectory, Barnwell, Northamptonshire

Soden, I Northampton : Northamptonshire Archaeology, 2007, 34pp, pls, colour pls, figs, refs

Work undertaken by: Northamptonshire Archaeology

Building recording, analysis and a desk-based assessment have indicated that the Old Rectory, Barnwell was probably purpose built in the very early nineteenth century, perhaps around 1810. It comprised a number of simple phases but all were probably completed in quick succession, the house reaching its current size by 1822. Other alterations continued through the nineteenth and much of the twentieth century. Map evidence suggested that an earlier rectory building may lie to the north or east of the current building while human remains in previous archaeological fieldwork indicated that widespread graves lie under the lawns between the rectory and the church tower. THE OLD RECTORY, CRANFORD ST. MARY***Historical Analysis of the Site of the Former Kitchen Garden at The Old Rectory, Cranford St. Andrew***

Prentice, J Northampton : Northamptonshire Archaeology, 2007, 15pp, colour pls, figs, tabs, refs.

Work undertaken by: Northamptonshire Archaeology

Desk-based assessment and site investigation was undertaken to establish the date and development of the area known as the walled garden at Cranford St. Andrew Rectory. It appeared to have simply been the eastern part of the plot in which the Rectory stood. Though a high brick and stone wall ran along the eastern boundary, there was no evidence from historic maps or from the structure and layout of the area to imply that it was historically a walled garden. The wall was likely to have been built to screen the property from the adjacent road. [Aut(abr)]

OLD GREENS, NORTON ROAD, TOWCESTER***An Archaeological Desk-based Assessment of the Central Wool Growers, Old Greens Norton Road, Towcester, Northamptonshire***

Walker, C Northampton : Northamptonshire Archaeology, 2007, 21pp, colour pls, figs, tabs, refs.

Work undertaken by: Northamptonshire Archaeology

A desk-based assessment found limited archaeological investigation was undertaken when the factory was constructed in 1975, and during later modifications in 1988 demonstrated the presence of Romano-British remains. These were probably related to Watling Street, which bordered the east of the site and included an unspecified number of human burials, along with boundary ditches, cobbled areas and a number of finds. It is unclear, however, how much of the archaeology was destroyed by the construction of the factory and associated facilities, although it would be logical to assume that there will be some survival beneath the areas of car park.  Hunt, L Leicester : University of Leicester Archaeological Services, 2007, 15pp, colour pls, figs, tabs,
 refs
Work undertaken by: University of Leicester Archaeological Services
 The assessment concluded that there was a low to moderate potential for archaeological remains to be
 found at the site. The area had been developed before, and partially levelled during the building of the
 college in the 1950s. There was once a burial ground situated in the northern end of the site, however,
 this area had seen significant truncation. The southern end of the site was likely to have been less
 damaged, and remains may have been preserved under garden deposits. Three caves were known to
 exist in the area, but only one was likely to be encountered during building work. [Au(adp)]

 Sheppard, R Nottingham : Trent & Peak Archaeological Unit, 2007, 18pp, colour pls, figs, refs
Work undertaken by: Trent & Peak Archaeological Unit
 An assessment in response to proposals to build two new storage structures determined that it was
 debatable whether the 19th century use of the development area warranted archaeological investigation.
 Plans to build adjacent to the garden wall, however, were met with some concern, as this was a
 structure of some importance. The work could have impinged on the wall's foundations and restricted
 airflow to the brickwork. It was suggested that the development should be kept 1.2m from the wall in
 case of the need for future repair work. [Au(adp)]

HIGH MARNHAM POWER STATION

An Archaeological Desk-based Assessment of High Marnham Power Station, Nottinghamshire

Kinsley, G & Appleton, E Nottingham : Trent & Peak Archaeological Unit, 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: Trent & Peak Archaeological Unit

The proposed scheme involved the construction of the power station within the already disturbed former power station site. A large additional area of arable land to the west and south had been designated for lay-down of materials. This would be subjected to stripping, tracking of vehicles and temporary resurfacing. Filled-in river channels may have existed in the area of alluvium adjacent to the river, within the development site, but it was not anticipated that these would be subject to ground disturbance. Extensive cropmarks indicating prehistoric or Roman land-divisions, trackways and enclosures existed to the south and north of the development site, and may have extended into it. Settlement was recorded at High Marnham from the late Saxon period onwards; the village lay entirely beyond the development site, but its extent may have changed in the past, and remains could have extended into the development site. Almost all the existing power station site had been disturbed by substantial building and earthworks, but although the arable area designated for materials storage will have suffered erosion from ploughing this was not likely to have removed all traces of any archaeological remains present. New building within the power station site was unlikely to affect any archaeological remains as, if originally present, they would almost certainly have already been destroyed by the existing structures, apart from a small area under the sports field. Most of the materials storage area (with the exception of the floodplain alluvium adjacent to the river) would be stripped and resurfaced; this was likely to damage or destroy any archaeological remains present beneath the topsoil. A staged programme of fieldwalking and geophysical survey within the lay-down area was recommended, in order to identify any archaeological features present. Field evaluation of significant features or finds concentrations revealed in the surveys was recommended, should any be discovered. At this point it should be possible to draw up a scheme of treatment for archaeological remains affected by the development. This could potentially include preservation in situ of complex areas of archaeological features by avoiding ground disturbance, excavation prior to construction of threatened areas of archaeological features where preservation in situ was not practicable, and a watching brief on areas where archaeological features were suspected, but could not be located by any of the above methods. CgMs London : CgMs, 2007, 50pp, colour pls, figs, tabs, refs

Work undertaken by: CgMs

The site was thought to contain little of archaeological interest. It was likely that the road forming the northern boundary of the site had been in existence since the medieval period, later becoming part of the Great North Road. However, it was suggested that the site itself was predominantly wasteland, and by the 1700s was common pasture suggesting little agricultural value. [Au(adp)]

LAND AT STANDFORD ROAD, SHEFFORD***An Archaeological Desk-based Assessment of Land at Stanford Road, Shefford, Bedfordshire***

Walker, C Northampton : Northamptonshire Archaeology, 2007, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

A desk-based assessment was conducted on land at Stanford Road, Shefford, in advance of a proposed development. Significant Roman finds have been found to the west of the town on the Ampthill Road indicating the presence of a settlement, the size of which had not yet been determined. The course of a possible Roman road may also have run close to the south-western perimeter of the site. The site as a whole had been associated with Shefford Mill, situated on its eastern edge, since at least the early 16th century and probably longer. The former mill was demolished in the 1960s, but it was thought that there may have been a mill in this location since the creation of the Domesday Book in the 11th century. There were features within the site associated with the last mill including the mill pond and the reservoir to feed the mill head. It was possible that there may be buried archaeology on site relating to earlier mills. [Au(abr)]

Woolhouse, T & Sparrow, P Hertford : Archaeological Solutions, 2007, 35pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The site comprised a 1960s house and private gardens, which had been previously excavated between 1967 and 1969. These excavations found significant multi-period remains including a high-status 3rd century Roman corridor villa, a late Anglo-Saxon church and associated cemetery containing approximately 400 burials, a 12th century siege castle and a later medieval windmill. It was unknown whether a full archive of reports survived, but a summary report was held at the NMR. It had not been possible from this report to establish which remains were fully excavated and which had simply been observed. It was deduced that highly significant remains would be present in situ on the site. Little disturbance would have been caused by the footprint of the 1960s building, however, the summary report did imply that tracking of machinery and landscaping of gardens in the northern portion of the site will have impacted upon a wider area. STOW LONGA TO TILBROOK (HUNTINGDONSHIRE), ANGLIAN WATER PIPELINE (PHASE 1)

Stow Longa to Tilbrook (Huntingdonshire), Anglian Water Pipeline (Phase 1)

Atkins, R & Palmer, R Cambridge : Cambridgeshire Archaeology, 2007, 64pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

A desktop assessment was carried out for a 4.2km pipeline, three pumping stations and a treatment works with the pipeline running between the villages of Stow Longa and Tilbrook in Huntingdonshire. Documentary records and map evidence imply that Stow Longa may

have been a Middle Saxon estate centre with a mother church. The medieval map implies the village was formed around a sub-rectangular green with streets running off it. Tilbrook dates from at least the Late Saxon period and is more likely to have been a planned early medieval settlement based on a large rectangular gridded network. Stow Longa village has shrunken in size since the medieval period. Part of the subrectangular green are now fields and the proposed pipeline was projected to run through part of this area. Within both the existing villages, where the pipeline does not run within beneath the road matrix, and during the construction of the three pumping stations, there is extremely high potential for disturbance of archaeological remains. Other possibly interesting archaeological areas include where the pipeline bisects two cropmark systems (CHER nos. 10036 and 10039) which could be prehistoric or Roman in origin. [Au(abr)]

Heppell, E Chelmsford : Essex County Council Field Archaeology Unit, 2007, 38pp, colour pls, figs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

The known historic environment in and around the park included the remains of the priory. These comprised a range of buildings, including the dramatic 15th century gatehouse, many of which were Listed. The site of the priory was a Scheduled Ancient Monument and a registered park and garden. The assessment established that there were areas of archaeological potential within the park and in the immediate vicinity, although in some cases the relative paucity of archaeological investigation made it difficult to define locations, extents and the character of the resource. Possible prehistoric activity was represented by the presence of tumuli within the park. The date of these features were unconfirmed. Areas of aggregate extraction were likely to have no or low archaeological potential. [Au(abr)]

Knight, M Leeds : W.A. Fairhurst & Partners, 2007, 151pp, colour pls, figs, tabs, refs

Work undertaken by: W.A. Fairhurst & Partners

An archaeological desk-based assessment was carried out at the site. Hoddesdon lay on the west bank of the river Lea, which marked the boundary between Hertfordshire and Essex and to the north of Broxbourne. There were Mesolithic, Neolithic, Bronze Age and Late Iron Age, Roman sites and medieval to post-medieval sites within 1km of the school site. No Saxon finds were found within the area. The first evidence of recent land use was obtained from the first edition OS map published in 1880, which indicated a gravel pit on the site. [Au(adp)]

BAYFORDBURY MANSION, LOWER HATFIELD ROAD, BAYFORD

Bayfordbury Mansion, Lower Hatfield Road, Bayford, Hertfordshire. Archaeological Desk-based Assessment

Doyle, K Hertford : Archaeological Solutions, 2007, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological desk-based assessment was carried out and revealed that there was potential for post-medieval and onward remains at the site, contemporary with the construction and development of the house and surrounding landscaped park. There was only a low to moderate potential for archaeological remains dating to the prehistoric, Romano-British, Anglo-Saxon and medieval periods. The site walkover suggested that there was likely to be few archaeological remains of significance within the site which predated the late 18th century and the establishment of Bayfordbury. PENTLOWS FARM, BRAUGHING

Archaeological Desk-based Assessment: Pentlows Farm, Braughing, Hertfordshire

Hunn, J Milton Keynes : Archaeological Services & Consultancy Ltd., 2007, 39pp, colour pls, figs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd.

In March 2007 a desk-based assessment was undertaken in order to inform a planning application for the residential development of the farm complex. No archaeological deposits have been recorded on the site, other than the listed farm buildings on the eastern side of the site. However, the possible route of a Roman road crosses the pasture field to the west of the farm, and the walkover survey revealed at least one possible house platform in this area. In addition, the land adjacent to the river Quin could contain significant environmental deposits, or structures built to manage or exploit water resources. [Au(abr)]

LAND BETWEEN LONDON ROAD AND THE A10 BYPASS, BUNTINGFORD*Land between London Road and the A 10 Bypass, Buntingford, Hertfordshire. An Archaeological Desk-based Assessment*

Peachey, A Hertford : Archaeological Solutions, 2007, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological desk-based assessment was carried out at the site and revealed that the site was used agriculturally with only very sparse evidence for any prehistoric or Roman activity in the vicinity. Cartographic evidence indicated that the site was part of the open field system to the south of the town. The arrival of the Ware, Hadham & Buntingford Railway in 1863 bisected the open field containing the site, however, the site appears to have remained agricultural with minor alterations to field boundaries within the site. The principal post-medieval development in close vicinity of the site was the relocation of the grammar school to land now occupied by St. Francis Close in 1882. Central areas of the site were at the times part of the grammar school or its subsequent incarnations, probably as gardens or playing fields before being incorporated back into the fields that form the site. Work undertaken by: Museum of London Archaeology Service

An archaeological desk-based assessment was carried out for the site, which did not contain any Scheduled Ancient Monuments. A small area at the southern tip of the site fell within an Area of Archaeological Significance as defined by the local authority. The site was located on a floodplain and had a high potential for the survival of alluvial deposits containing palaeo-environmental information with good potential for the survival of organic material. The potential for Roman material was low,

with a moderate potential for Saxon and medieval material and high potential for post-medieval remains. A Listed brewery building contained important industrial archaeological remains. [Au(adp)]

RAILWAY STREET

Railway Street, Hertford, SG14. Report on Phase 1 Desk Study (2Vol.)

Ian Farmer Associates Gateshead : Ian Farmer Associates, 2007, 42pp, pls, figs, tabs, refs

Work undertaken by: Ian Farmer Associates

A desk-based assessment was carried out in Phase 1, and a site investigation was carried out as part of Phase 2. A walkover survey was carried out as part of Phase 1, at the time of this walkover the site comprised a disused vehicle repair workshop and a large excavation where three underground fuel storage tanks were previously located. According to historical maps the site comprised ten unlabelled buildings of varying sizes and some vacant land from at least 1881. Phase 2 consisted of site investigations, including a contamination risk assessment comprising of six boreholes. This assessment encountered an elevated TPH hotspot in borehole WS2 within the natural chalk strata at a depth of 3.00m as well as elevated nickel, TPH and PAH in the groundwater. Whilst initial gas monitoring did not indicate a significant pollutant linkage, further monitoring may be required to comply with current guidelines and to confirm that no special precautions will need to be adopted within the proposed structures to prevent the ingress of toxic gases. THE POST OFFICE, 84-86 FORE STREET, HERTFORD

Desktop Assessment at the Post Office, 84-86 Fore Street, Hertford, Hertfordshire

Fletcher, T Cambridge : Cambridgeshire Archaeology, 2007, 62pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

The site lay on Fore Street in the core of Hertford, a late Saxon and medieval town, which was identified as an Area of Archaeological Significance. The study area lay in a zone of high archaeological potential within, or close to the southern of two Saxon Burghs. The area around the development zone had been subject to previous archaeological investigations that had revealed Saxon and medieval occupation. The area was also rich in Listed Buildings, many dating from the medieval period. The location of the development site meant that the potential for the existence of archaeological remains was deemed high. However, the likelihood of survival depended on the level of disturbance from post medieval/ modern activity at the rear of the site. This could only be established through further investigation by intrusive methods. If alteration work was carried out to the fabric of the Post Office building, then there was potential for the survival of original features, fixtures and fittings which may have warranted recording. LAND AT MILLFIELDS, SAWBRIDGEWORTH

Land at Millfields, Sawbridgeworth, Hertfordshire. Archaeological Desk-based Assessment

Smith, M Bedford : Albion Archaeology , 2007, 30pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

An archaeological desk-based assessment was carried out at the site, which lay in an area of archaeological interest with numerous Scheduled and unscheduled crop marks dating from the Neolithic/prehistoric period. In close proximity to the site, the HER listed the possible presence of a prehistoric long barrow that housed at least four inhumations and as a result of this discovery the site was included in the Hertfordshire local plan as an area of archaeological significance. The likelihood of archaeological deposits being present at the site was considered to be moderate to high. This along with other evidence combined to suggest the site was located within a wider prehistoric landscape. The potential for archaeological deposits of possible local or regional significance to be located within the proposed development area was considered to be low to moderate. However, it was thought that only through archaeological field evaluation would it have been possible to determine whether or not such deposits did actually survive within the site. [Au(adp)]

SAWBRIDGEWORTH COMMUNITY LIBRARY, THE FOREBURY, SAWBRIDGEWORTH

Sawbridgeworth Community Library, The Forebury, Sawbridgeworth, Hertfordshire. Archaeological Desk-based Assessment

Smith, M Bedford : Albion Archaeology , 2007, 29pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

An archaeological desk-based assessment was carried out at the site. The site lay in an area of archaeological interest with numerous Scheduled and unscheduled cropmarks dating from the Neolithic/prehistoric period. The nearest known archaeological remains were of a large probable medieval ditch believed to be associated with the well documented but undiscovered Sayesbury Manor that was thought to lie beneath the present town. The likelihood of archaeological deposits being present of the site was considered to be high. The close proximity of the large medieval ditch combined with the Saxon origins of the nearby church and the position of the site within the medieval part of the town all combine to point to the potential presence of either local or regionally significant deposits. If remains were present then their survival beneath the existing library building was considered to be low. However, the area to the north currently a car park, had good potential for the preservation of archaeological remains. Only through archaeological field evaluation would it be possible to determine whether or not such deposits did actually survive within the site. [Au(adp)]

NEW EAST CAR PARK, GSK, PRIORY STREET, WARE

Archaeological Impact Assessment at Proposed New Car Park, GSK, Priory Street, Ware, Hertfordshire

Doyle, K Hertford : Archaeological Solutions, 2007, 47pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological impact assessment of land found the site had the potential for archaeological remains dating from the Neolithic, Bronze Age and Romano-British periods in particular. There was only a low potential for Palaeolithic remains and moderate to high potential for Iron Age occupation. Post-Romano-British finds and features have been found in lower quantity and density in the area surrounding the site, and thus only had a low to moderate potential. An initial archaeological evaluation undertaken to the immediate west of the site revealed Neolithic/Bronze Age remains, and a Neolithic/Bronze Age cropmark of a single ditched enclosure was 30m to the northeast. The site, however, was beyond the western periphery of the Roman settlement at Ware, which straddled Ermine Street. [Au(abr)]

72-74 South Road, Baldock, Hertfordshire. Archaeological Desk-based Assessment

Ashworth, H Letchworth : Heritage Network, 2007, 38pp, figs, tabs, refs

Work undertaken by: Heritage Network

An archaeological desk-based assessment found that of SAM 27913, consisting of a Romano-British small town and Late Iron Age settlement, was within the vicinity of the site. The line of the road to the important Late Iron Age oppidum at Braughing formed the northern boundary and a minor road formed the western boundary of the site. Both roads were established in the Iron Age and continued in use to

the modern period. There was a low probability of encountering features and finds of early prehistoric, early medieval and medieval date. The probability was moderate for later prehistoric and high for Late Iron Age, Roman, post-medieval and modern periods. The probability for underlying archaeological remains of pre/post-medieval date was greatest in the southern half of the site. Building remains which related to the late 19th century farm may have survived at the northern end. [Au(adp)]

LAND TO THE REAR OF NO.4, KNEESWORTH STREET, ROYSTON

Land to the Rear of No.4, Kneesworth Street, Royston, Hertfordshire. A Desk-based Assessment

Muldowney, M Cambridge : Cambridgeshire Archaeology, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire archaeology

An archaeological desk-based assessment was carried out at the site and revealed that the development area lay within the historic medieval centre of Royston, near the corner of Kneesworth Street and Melbourn Street. Both these roads were known to have Roman or pre-Roman origins and were important trade and communication routes. The buildings themselves stood amongst buildings of medieval to post-medieval date, a small number of which were Listed Buildings. Royston was a town with variable archaeological potentials. Pre-Roman archaeological remains are unlikely to be found in the development area, although some occupation evidence had been identified on the south-west outskirts of the town in Briary Lane. Iron Age and other prehistoric remains were also of low potential and were more likely to be encountered to the east on Therfield Heath. There was also a low potential for Saxon remains although it was thought that a small settlement may have existed at or near the crossroads of Kneesworth Street and Melbourn Street. It was most likely that the development area may have contained remains from the medieval and post-medieval period, particularly the later medieval period, for example from 1500 onwards. At this time Royston was a thriving market town and was thought to have expanded beyond the development area. [Au(adp)]

THE MATALAN SITE, STEVENAGE**An Archaeological Desk Based Assessment of the Matalan Site, Stevenage, Hertfordshire**

MacQuarrie, H Twickenham : AOC Archaeology Group, 2007, 74pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

A desk-based assessment was undertaken on the Matalan Site, Stevenage. The site did not contain any Scheduled Ancient Monuments, nor did it contain any Listed Buildings or SMR entries. However, the site lay 200m north of the Scheduled Ancient monument Six Hills and was adjacent to the Great North Road, a possible Roman Road. The assessment covered all aspects of the study area, including the existing built environment, sub-surface archaeological potential and associated cultural connections. The quality of archaeological information for the site was sufficient to establish a high level of confidence in the nature and character of the archaeological issues raised by the development. There was a small possibility that prehistoric activity, of Palaeolithic and Neolithic date would be present within the site area. There was also a small to medium probability that archaeological remains of Roman date, possibly associated with the Scheduled Roman burial mounds to the south of the site, and the presumed Roman road to the west of the site, would be present within the site boundary. These archaeological features, if present, were likely to be considered of local to regional importance. It was recommended that an archaeological evaluation would be conducted ahead of redevelopment in order to establish the extent of surviving archaeology. [Au(abr)]

10-12 CHALK HILL***Archaeological Deskbased Assessment of 10-12 Chalk Hill, Watford***

Hunt, G London : L-P: Archaeology, 2007, 34pp, pls, figs, tabs, refs

Work undertaken by: L-P: Archaeology

A desk-based assessment was undertaken at 10 – 12 Chalk Hill. Examination of the available data indicated that the site did not contain any known archaeological deposits of national importance or any Scheduled Ancient Monuments. The site lay alongside a road that had been in existence since at least the Roman period and throughout the medieval and post-medieval periods. However, there was no known activity on the site from prehistoric or Roman periods, and little evidence in the immediate vicinity to suggest the site was a focus of settlement during these periods. Past land use would have affected the survival of archaeological deposits on the site, however, the extent and nature of any impacts is not fully understood from the documentary record. In general, the evidence pointed to a low archaeological potential in all periods, however, the fact that little archaeological investigation has been completed in the area may mean that unexpected archaeological remains could not be ruled out by documentary research alone. JUBILEE CLOSE, THETFORD***An Archaeological Desk-based Survey of a Proposed Development Site at Jubilee Close, Thetford***

Penn, K & Hutcheson, A Norwich : NAU Archaeology, 2007, 11pp, colour pls, figs, tabs, refs

Work undertaken by: NAU Archaeology

The area of the proposed development lay within the Scheduled Monument of the site of the Late Saxon Town and of St. John's Churchyard on London Road Playing Fields. The town bank was not extant in the area of the proposed development, and as such the Scheduled area did not extend into the site in question. However, it was possible that the remains of the earlier town bank may have been present within the northern part of the site, with other remains of prehistoric, Saxon and medieval date likely to be found. WOOD FARM, MARSHAM***Wood Farm, Marsham, Norfolk. Archaeological Desk-based Assessment***

Shelley, A London : Gifford & Partners, 2007, 30pp, colour pls, figs, tabs, refs

Work undertaken by: Gifford & Partners

The assessment established that there was strong evidence for activity from the Bronze Age and Roman periods, due to corresponding remains in the vicinity. The potential for the discovery of medieval remains was lower, as activity for this period was less well represented in the area. The date at which

buildings were constructed on the site was not established, however, what may have been a farmhouse and associated outbuilding were recorded on the 1840 Tithe map, with a possible precursor to this not discounted. [Au(adp)]

FLOAT FISH FARM, KING'S DELPH GATE, FARCET, PETERBOROUGH

Float Fish Farm, King's Delph Gate, Farcet, Peterborough, Cambridgeshire. An Archaeological Desk-Based Assessment

Thompson, P, O'Brien, L, Grassam, A & Unger, S Hertford : Archaeological Solutions, 2007, 31pp, tabs, refs

Work undertaken by: Archaeological Solutions

Throughout prehistory the assessment site probably lay within the fen. To the west was a fen "island" with two Bronze Age barrows and a pot-boiler site. To the east was a peninsula leading up to the Neolithic and Bronze Age settlement site at Bradley Fen/King's Dyke, on a fen embayment c.2.5km to the north. This peninsula has a scheduled barrow site (SAM 3393) and a barrow field at Suet Hills. Around the island and peninsula were several find spots of Bronze Age metalwork, possibly votive deposits. Roman burials and crop marks relating to structures have been found at Horsley Toll, 500 metres north of the assessment site, and it is possible a Roman settlement was located here. Further Roman burials are known from the 'peninsula', near Bunting's Farm to the east. The Fen Causeway passed c.3.5km to the north, leading past further burials and a probable Roman settlement at Whittlesey. The north-east boundary of the site is formed by Oakley Dike which was cut at an unknown date between the Roman period and the 13th century. In the medieval period the area was covered by fen, with the shallower areas of Farcet Fen providing summer grazing. The fen was drained and enclosed in the 17th century, providing the rural form and character seen today. [Au]

PARKERS MILL, MILL STREET, MILDENHALL

Parkers Mill, Mill Street, Mildenhall, Suffolk. Archaeological Desk-based Assessment

Sparrow, P Hertford : Archaeological Solutions, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

Parkers Mill was situated on the north side of the River Lark, on a leat running roughly parallel to the river. The wider location of the site was significant, as it was located on the edge of, and extended into, the Lark floodplain, an area that would have been attractive to prehistoric settlers and farmers. There was evidence for prehistoric activity to the west of the site. The mill building was still standing, as was Mill House, which was Scheduled. The majority of the site was occupied by hard-standing, and there was a likelihood that levelling layers, relating to the industrial use of the site, were present in some areas. [Au(abr)]

ST. MARYS WORKS SITE, ST. MARY IN COSLANY*The Archaeology of the St. Mary's Works Site, St. Mary in Coslany, Norwich*

Soden, I Northampton : Northamptonshire Archaeology, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

A desk-based assessment was conducted on the St. Mary's Works Site, within the historic parish of St. Mary, founded in the late Saxon period. Good documentation survived for many, if not all, of the historic plots, with considerable continuity. Map evidence also existed on which either the site and/or constituent parts could be discerned back to 1696. Photographs survived to detail elements of historic buildings along some of the frontages, although no such buildings survived there. Cellarage from the 19th century, basements and widespread foundations of the 20th century and related utilities had combined to substantially denude any archaeological deposits on the site. Geotechnical data provided a good view of the thickness of deposits. Together, the documentary archive, map regression and nearby archaeological data, combined with an understanding of the subsequent, increasingly destructive development of the site, pointed to good survival of archaeological remains in one particular area. Other islands of archaeology may have survived in unpredictable places, especially if they included features such as ditches or pits. [Au(abr)]

SHIRE HALL COMPLEX

Archaeological Assessment Report. Shire Hall Complex

Carr, R & Gill, D Ipswich : Suffolk County Council Archaeological Service, 2007, 96pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological assessment, comprising a documentary search, geophysical survey and the excavation of trial holes was undertaken as part of the study into the possible future use and development of the Shire hall site, Bury St. Edmunds, part of which lay within the precinct of the Abbey. The investigation identified the site of the Sacrist yard beyond and outside the south precinct wall. The yard would have contained the homes, offices and workshops of the Sacrists' staff, and part of the gatehouse into the yard was identified in the fabric of the standing monument. Evidence of a return wall on the east side of the precinct and a possible ditch alongside the south wall were also found. Within the precinct human burials, part of the monks cemetery were found and finds recovered from the test pits included a considerable quantity of medieval pottery and tiles, dating to the middle of the twelfth to the middle of the thirteenth century. Glazed medieval roof tiles, indicative of high-status buildings, were also found and these were thought to be directly associated with the Abbey and Ipswich and Thetford-ware pottery confirmed that this part of the town was also within the Middle and Late Saxon settlement area. Hindmans Way, Dagenham Docks, Essex. London Borough of Barking Archaeological Desk-Based Assessment

Rodenbuesch, I & Halsey, C London : Museum of London Archaeology Service, 2007, 30pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological desk-based assessment was carried out at the site, which lay within an Area of Archaeological Significance as defined by the local authority. This area was designated in relation to the river Thames floodplain and archaeological activity associated with and around it. The site had a low potential for prehistoric, Roman, medieval and post-medieval period archaeology. Most of the site was open marshland until its final reclamation in the first half of the 20th century. Only the two northern ends of the east and west leg of the proposed road fell within field boundaries adjacent to the

north of the marsh wall. The road corridor was unlikely to truncate potential archaeological deposits to any large degree. [Au(adp)]

LAND AT 1 COLINDALE AVENUE, EDGEWARE

Archaeological Desk-based Assessment Land at 1 Colindale Avenue, Edgware

Hawkins, D London : CgMs, 2007, 20pp, figs, refs
Work undertaken by: CgMs

An archaeological desk-based assessment was carried out at the site and revealed that the site had a very low or low potential for all past periods of human activity except for the Roman period when its archaeological potential was moderate. Edgware Road followed the line of the Roman Road Watling Street. Because of the extent of past post-depositional impacts it was considered improbable that the proposed development would have any significant archaeological impact. [Au(adp)]

Archaeological Desk-based Assessment 290-294 Golders Green Road, London NW11

Meager, R London : CgMs, 2007, 30pp, colour pls, figs, refs
Work undertaken by: CgMs

An archaeological desk-based assessment was carried out at the site and revealed that the site was considered to have a generally low potential for all archaeological periods, save for the medieval and post-medieval periods, where the potential can be categorised as moderate for the Golders Green frontage and a low for the remainder of the site. It was shown that the site had been truncated by past post-depositional activity concentrated along the Golders Green Road frontage. As a result of this study

a monitoring exercise had been proposed during construction groundwork on the Golders Green Road frontage. [Au(adp)]

Archaeological Desk Based Study and Impact Assessment Barnet College, Wood Street, Barnet

Meager, R London : CgMs, 2007, 74pp, pls, colour pls, figs, refs

Work undertaken by: CgMs

An archaeological desk-based assesment was carried out at the site and revealed that the northern edge of the site could be shown to have a good potential for the medieval and post-medieval periods. Past post-depositional impacts at the study site were shown to have been severe and destructive, principally as a consequence of the construction of the existing college buildings. Further mitigation in the form of a programme of archaeological trial trenching targeted specifically in the north-eastern corner of the site has been proposed. [Au(adp)]

Work undertaken by: Entec UK Ltd.

No features of cultural heritage interest were known to exist within the site. The potential for the presence of sub-surface archaeological remains was reduced by the historically open character of the site and the 19th and 20th century development associated with the building and re-building of the vicarage and its conversion to a residential care home in the 1960s which entailed the construction of additional buildings. Clay, C Branston : Allen Archaeological Associates, 2007, 21pp, pls, colour pls, figs, refs

Work undertaken by: Allen Archaeological Associates

An archaeological desk-based assessment was carried out at the site in advance of major redevelopment and revealed that archaeological remains have been discovered close to the site, including a Bronze Age hoard of metalwork to the south. A Roman road was also believed to pass through or close to the site. From the post-Roman period until 20th century the site was open agricultural or parkland and as such any archaeological deposits that would occur on the site were

unlikely to have been affected by modern ploughing. On the basis of this study the archaeological potential of this site was considered to be low to moderate. [Au(adp)]

Knight, H London : Museum of London Archaeology Service, 2008, 37pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological desk-based assessment was carried out at the site. Heath House was a Grade II* Listed Building. The garden wall and railings that surrounded the house were Grade II Listed. The site was located within the Hampstead Conservation Area but was not located within an archaeological priority area as defined by local authority. The site had low potential for archaeological remains dating to prehistoric, Roman and medieval periods, but high potential for remains dating to post-medieval period. The current house dated to the 18th century and associated features such as footings of ancillary buildings, garden features, rubbish/cess pit and wells may have been present. A watching brief is recommended. [Au(adp)]

Mills Whipp Projects London : Mills Whipp Projects, 2007, 52pp, figs

Work undertaken by: Mills Whipp Projects

An archaeological desktop assessment was carried out for the site and revealed that significant archaeological deposits of early to mid Roman date might have survived, albeit in fragmentary state beneath the south-western half of the site. Roman deposits would conform to a recognised pattern of settlement as recorded during the 1987 excavation of the site. The construction of the existing building would have truncated the late Roman sequence down to 3rd/4th century Roman dumps at approximately 8.00mOD. The 1987 archaeological excavations removed archaeology from the northern and eastern side of the site. A field evaluation was recommended to establish the extent of the archaeology and was likely to be attached to consent by means of a condition. [Au(adp)]

Miles, A & Knight, H London : Museum of London Archaeology Service, 2007, 53pp, figs, tabs

Work undertaken by: Museum of London Archaeology Service

An archaeological desk-based assessment was carried out at the site and revealed that the site was in an area of industrial activity during the Roman period with pottery kilns excavated on the adjoining site. Evidence of glass working and tanning had been found in the immediate vicinity. A channel of the river Wallbrook was projected to run below the site which would have been exploited in Roman times, and then infilled in the medieval period, probably with industrial waste. The survival and preservation of organic material was therefore likely to be good. [Au(adp)]

RIVERBANK HOUSE, UPPER THAMES STREET

Riverbank House, Upper Thames Street, London EC4. An Archaeological Desk-based Assessment

Wroe-Brown, R & Mills, W London : Museum of London Archaeology Service, 2007, 167pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The desk-based assessment revealed that there was a low potential for prehistoric remains, a high potential for Roman waterfront structures, a high potential for the medieval waterfront structures and moderate potential for post-medieval remains. In addition there was high potential for foreshore deposits, of geoarchaeological and environmental significance for all periods. The basement of the present building has removed most of the archaeological remains within its footprint leaving the

truncated remains of reclamation deposits behind revetments and layers of foreshore and alluvium. The alluvium deposits have high potential for environmental remains. Outside the existing basement retaining wall archaeological deposits including waterfront reclamation deposits and structures will survive beneath backfilled post-medieval cellars. The mitigation strategy for the site will involve the archaeological excavation of the pile positions external to the building where these fall in areas of higher archaeological potential. In areas of lower potential boreholes may be sunk to record the sequence of deposits and to recover samples. On the northern frontage of the building it was possible that remains of the 3rd century Roman riverside wall and earlier Roman revetments may survive. A geoarchaeological and environmental sampling strategy and watching brief will be required within the existing building. Monitoring geotechnical boreholes, window sampling and trial pits demonstrated the presence of prehistoric organic beds, Roman and medieval foreshore deposits and medieval to post-medieval made ground. The development would not increase the flood risk of the site and its surrounding area. [Au(adp)]

PLUMTREE COURT

Plumtree Court, London EC4, City of London. An Archaeological Assessment

Mills Whipp Projects London : Mills Whipp Projects, 2007, 23pp, figs, refs

Work undertaken by: Mills Whipp Projects

An archaeological desk-based assessment was carried out at the site and revealed that the site once had a high archaeological potential as Roman burials have been found along the western bank of the fleet. Additionally the site almost certainly contained buildings belonging to the first Dominican friary in London before it was relocated within the city walls in the mid 13th century. The existing building site had a deep basement which had been terraced into the hillside making it highly improbable that any archaeological deposits survived in the western half of the site and any surviving deposits elsewhere would be heavily truncated. There was also evidence that the previous building on the site had deep basements. [Au(adp)]

43 FARRINGDON STREET, 25 SNOWHILL AND 29 SMITHFIELD STREET
Archaeological Impact Assessment. 43 Farringdon Street, 25 Snowhill and 29 Smithfield Street, London EC1, City of London

Francis, A & Dawson, H London : Museum of London Archaeology Service, 2007, 46pp, figs, refs
Work undertaken by: Museum of London Archaeology Service

An archaeological impact assessment was carried out in the form of a desk-based assessment for the site, which was considered an Archaeological Priority Zone and was located within the Smithfield Conservation Area and contained one Listed Building known as "Red House", which formed part of 25 Snow Hill. Archaeological deposits were likely to have been truncated in the eastern part of the site due to basements, but deep cut features such as wells or pits might have survived. The survival of ancient ground surfaces on the site was almost entirely limited to alluvial deposits and foreshore gravels associated with Fleet river. Within the foreshore gravels there was potential for survival of artefacts and environmental material such as plant macrofossil and animal bone. There was also some evidence on the site for the survival of brick walls of not earlier than 19th century origin. Railway tracks surviving intact beneath the car park surface have not been firmly dated, but it was known that the general market constructed in 1883 was provided with ramped access to railway sidings. SUMNER GARDENS, CROYDON

An Archaeological Desk-based Assessment at Sumner Gardens, Croydon

Riccoboni, P Portslade : Archaeology South-East, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for a plot of land adjacent to Sumner Gardens. A review of the existing archaeological and historical sources suggested that the site had a low potential for containing any archaeological deposits/features of any period, although the possibility of locating former field boundaries and/or trackways was highlighted. Victorian and modern development was likely to have had a substantial effect on the site, but to an unknown extent. Archaeological features and deposits may have survived best in areas used as gardens or open spaces. [Au(abr)]

COULSDEN NORTH INDUSTRIAL ESTATE, COULSDEN

Coulsden North Industrial Estate, Coulsden, Surrey. Archaeological Desk-based Assessment

Norman, L Lancaster : Oxford Archaeology North, 2007, 30pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

The assessment found evidence of field systems from the Late Iron Age to Roman periods, representing land use that may have extended into the Scheme Area. The presence of woodland into the 19th century on areas of the site suggested a lack of development that may have been beneficial to the preservation of archaeological remains. The proposed development would have involved some piling, but as this was scheduled to take place within the footprint of previous buildings, it was not thought that any archaeological remains were under threat. Selsdon Park Hotel, Addington Road, Surrey. An Archaeological Desk-based Assessment

Archaeological Solutions Hertford : Archaeological Solutions, 2007, 34pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The site was in an area with significant distribution of flint artefacts from Mesolithic and Neolithic recorded as find spots, although only very few linked with archaeological excavation. The Neolithic evidence included a flint axe recorded on the ground of the site with several further Neolithic to Bronze Age worked flints recorded 200m north-west of the site. Until the post-medieval period, the site appeared to have remained in the agricultural hinterland. [Au(abr)]

Darton, L & Chadwick, P London : CgMs, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: CgMs

The assessment found that the site had a low archaeological potential for all periods, due to past post-depositional impacts. The supposed ancient well, The King's Ring, was more likely to date to the late post-medieval or early modern period, and there was little evidence to support its existence on the study site. Modern brickearth extraction would have removed all archaeological features. No further work was recommended. [Au(adp)]

Archaeological Desk-based Assessment: Green Hollow, Coombe Hill Road, Kingston-upon-Thames
 Fell, D Milton Keynes : Archaeological Services & Consultancy Ltd., 2007, 41pp, colour pls, figs, refs
Work undertaken by: Archaeological Services & Consultancy Ltd.
 An archaeological desk-based assessment was undertaken of land at Green Hollow in advance of the construction of a new house. The site probably comprised open ground until the 1930s when it was incorporated into the grounds of a house named Coombe Green. A tennis court was constructed on the site and during the 1950s or 1960s a further house, named Green Hollow, was constructed in the north part of the site. Archaeological remains were not identified from the site, but a number were known from the surrounding area, notably a concentration of prehistoric and Roman artefacts from Kingston Hill, to the west of the site. Any archaeological remains not identified during the assessment which may have been present within the footprint of the tennis court and Green Hollow were likely to have been extensively disturbed or destroyed during the terracing and construction operations. Overall, the site is considered to offer low archaeological potential. [Au(abr)]

Carter, N Twickenham : AOC Archaeology Group, 2007, 77pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The 500m study radius contained no conservation areas or scheduled monuments. The assessment identified 67 individual entries within the 500m radius, including 19 Listed Buildings. There was one GLSMR entry within the application site itself, relating to the discovery of arches of the medieval Bow Bridge found in the late 18th century. The site lies within an Archaeological Priority Area covering the area of the Lea River Valley. It was thought there was a high potential for prehistoric archaeological and palaeoenvironmental evidence in this area. If present, such remains may have been of regional or national importance. There was also high potential of settlement evidence and activity including footings of early 12th century Bow Bridge. [Au(abr)]

Meager, R London : CgMs, 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: CgMs

The site was shown to have a moderate potential for the later prehistoric and Roman periods. Past post-depositional impacts were severe, principally as a result of the construction of a sewage works across the site, followed by the existing school buildings. No further archaeological mitigation measures were recommended. [Au(adp)]

An Archaeological Desk-based Assessment of Land at Devon Wharf, Levan Road, Tower Hamlets, London

Carter, N Twickenham : AOC Archaeology Group, 2007, 79pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The cartographic and historical sources indicated that the site was situated away from the main focus of Roman activity to the west and to the south of the main focus of Saxon and medieval settlement in this area. It was thought likely that the site was marshland during these periods and there was no evidence in the archaeological record to suggest Roman, Saxon and medieval or early post-medieval activity within the boundaries of the site. There was a high potential for Palaeolithic to late Bronze Age archaeological and environmental evidence in this area. There is also a high possibility of subsurface late post-medieval remains related to land reclamation and marsh drainage features and a medium to high potential of finding subsurface remains relating to early 20th century wharf buildings. [Au(abr)]

Francis, A London : Museum of London Archaeology Service, 2007, 23pp, figs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological desk-based assessment was carried out at the site and revealed that the site lay in an Area of Archaeological Potential from the Roman period onwards. The site was located within the Roman and medieval city approximately 650 m to the west of the city wall. Probable archaeological remains in this area may have consisted of features associated with Roman to medieval farming and quarrying, medieval building remains along the Chancery Lane frontage and post-medieval building remains. There was also some potential in this area for isolated Roman burials and also redeposited Saxon finds. [Au(adp)]

Adams, J Durham : University of Durham, Archaeological Services, 2007, 39pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

There was direct evidence that the area surrounding the proposed development area was occupied during and prior to the Roman period. Excavation evidence to the north suggested that a Roman road may have continued beneath the site. It was unknown to what extent the land was used in the medieval and early post-medieval period and to what extent an archaeological resource relating to this period may have survived. This resource may have related to buildings, rubbish pits or boundary features. Part of the area stood on the former site of a brickworks dating to the early post-medieval period. The site was subsequently developed in the early modern period into a motor mechanics and garage. These developments would have truncated the earlier archaeological resource. The site was within a residential setting within a conservation area. To the south of the study area there were five Listed Buildings and two Scheduled Ancient Monuments. Their setting would not be affected by the proposed development. The archaeological resource would be directly impacted upon through the construction of

foundations, associated services and any changes in ground conditions and the level of the land.

There was no direct evidence for any activity within the proposed development area before 1745, and any such evidence would be likely to have been removed by later land use. There was some evidence for mining activity on the site from 1745 onwards, although this relied on a map that could not be traced. Any such mining activity at this time would be small in scale and it was likely that later activity on the site would have removed any trace of it. A mine, known variously as Saint Pit, Latterday Saint Pit and Delves Colliery, was sunk in the proposed development area in 1847. It produced good quality coking coal, as well as good quality fire clay. These products were used in nearby works. By 1894 at the latest, a line of coking ovens had been constructed next to the colliery. The mine closed in 1913. The site was cleared and a new colliery, known variously as Victory Pit and Crookhall Victory pit, was sunk in 1921. This mine continued in production until 1963. After that date most of the colliery buildings and infrastructure were cleared and the site has been used since then as a scrap metal merchant's yard. Four buildings were located on the proposed development area. In the northeast corner was a terrace of derelict cottages that dated from between 1896 and 1921. The other buildings formed parts of the former Victory Pit and dated from 1921 or shortly after. An archway was present in one of these buildings, although this appeared to be a later insertion. Blaydon District Centre, Blaydon, Gateshead, Tyne and Wear. Archaeological Desk-based Assessment

Platell, A Durham : University of Durham, Archaeological Services, 2007, 23pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

A number of finds of prehistoric material had been made in the surrounding, however, no finds of such date were known to have come from the proposed development area. There were no historical records

of Blaydon until the end of the 17th century. A lead smelt mill was constructed on the river bank to the north of the study area around 1696 and continued in use until the mid 19th century. While this lay outside the proposed development area, housing for the workforce at the mill was present to its south, within the proposed development area. A wagon-way was constructed across the south-east corner of the study area around 1853 but had been removed before the end of the century. It had been used to carry coal from a mine to the south of the study area to staithes on the river. An undated but earlier mine shaft was present close to the wagon-way. The whole site was covered with terraced housing in the second half of the 19th to the beginning of the 20th centuries. This housing included occasional shops, public houses and schools. The entire site was cleared during the 1970s, with the current buildings constructed during the 1980s. This modern development was likely to have severely disturbed any earlier remains. [Au(abr)]

Archaeological Desk Based Assessment for Land adjacent to West Farm, Chopwell, Gateshead, Tyne and Wear

Peters, C Alston : North Pennines Archaeology Ltd., 2007, 38pp, pls, colour pls, figs, tabs, refs
Work undertaken by: North Pennines Archaeology Ltd.

An archaeological desk-based assessment was carried out at the site. There were 15 HER records for the immediate vicinity, ranging from Romano-British to post-medieval times. Recent developments in the area suggested that the foundation for this development may not have been deep enough in order to affect any archaeology. It was recommended that a programme of trial trenching was undertaken in order to establish the depth and preservation of any archaeology. This was of particular importance on the eastern side where surviving medieval features may have survived the subsurface. [Au(adp)]

Report on Desk-based Assessment at Land at Clockmill Road, Dunston, Gateshead, Tyne and Wear, NE8 2QX

Stewart, I J Gateshead : Ian Farmer Associates, 2007, 32pp, colour pls, figs, tabs, refs
Work undertaken by: Ian Farmer Associates

An archaeological desk-based assessment was carried out for the site. The earliest structures on the ropery site was the Team Gut staiths, on the west side of the tributary. The next structure indicated by the Ordnance Survey Map of 1840 was interpreted as the Team hemp ropery walk buildings of R.S. Newall & Co. Ltd. By the 3rd revision of 1897, the ropery buildings were shown, but not named and the straits had also been removed. Documentary records indicated an amalgamation of the firm of R.S. Newall with another firm Dixon & Corbitt by 1887. It was likely that wire and rope manufacturing was concentrated at another site further up the river using more up-to-date equipment and the new railway network. The former ropery buildings remained derelict until the late 1980s when the site was cleared in advance of the Gateshead Garden Festival of 1990. Since then the site has remained derelict and overgrown and subjected to fly tipping. [Au(adp)]

EAST FARM, KIBBLESWOTH, GATESHEAD***East Farm, Kibblesworth, Gateshead. Archaeological Desk-based Assessment***

Johnson, P Barnard Castle : Northern Archaeological Associates, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

Kibbleswoth was known from documentary sources to have existed since the medieval period, and the development area was situated within the boundaries of what was considered to be the original medieval settlement. The assessment found that it was possible that the farm had its origins as one or more of the medieval tenements. Cartographic evidence indicated that the site had remained undeveloped since at least the late 18th century. It was thought that the preservation of any archaeological remains would be high, but these remains would be related to agricultural practice. [Au(adp)]

THROCKLEY FILLING STATION, THROCKLEY, NEWCASTLE-UPON-TYNE***Throckley Filling Station, Throckley, Newcastle Upon Tyne, Archaeological Assessment***

Carlton, R J Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 37pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

An archaeological desk-based assessment was carried out on the site and the available evidence suggested that the site lay upon the course of the Hadrian's Wall frontier complex, with the site lying between the curtain wall itself and the vallum to the south. It was likely that the Roman military way cut across the centre of the site. Little was known about the nature of land use within the site following

the Roman period, although it was likely that the military way continued in use as a trackway, possibly until the construction of a road in the 18th century. The earliest map evidence suggested that by the early modern period the site lay within farmland and was devoid of structures until the very late 19th century or early 20th century when Beaulieu and Wooler House were constructed. WINN STUDIO, SHIELDFIELD, NEWCASTLE-UPON-TYNE

Winn Studio, Shieldfield, Newcastle upon Tyne. Archaeological Desk-based Assessment

Platell, A Durham : University of Durham, Archaeological Services, 2007, 18pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

There was no direct evidence for prehistoric, Roman or medieval activity within the study area. It was sufficiently far away from Hadrian's Wall to make it unlikely that the site was a focus for Roman occupation and sufficiently far away from the city walls to make it unlikely that the site was a focus for medieval occupation. Cartographic evidence indicated that the study area formed open fields until the mid 19th century, when terraced housing was constructed across it. This housing was replaced by the standing building during the late 20th century. The terraced houses were likely to have contained cellars, and the current building could be seen to be terraced into the ground surface. Both of these would have removed any archaeological deposits that were originally present in the affected areas. In light of the recent date of all recorded developments, and the truncation of much of the site, its archaeological potential was assessed as being very low. No further archaeological works were recommended in relation to this site. [Au(abr)]

Work undertaken by: Tyne & Wears Museum Archaeology Department

An archaeological desk-based assessment was carried out and revealed that during the early 19th century, coal and stone were being exploited in the area, which in turn brought the railway. The area immediately west of the site was built on in 1889 to form the factory for C.A. Parsons to construct steam turbines and to create the first steam powered ship, The Turbinia. The works expanded into the site by 1899 and by 1912 had extended beyond the site. The works consisted of a number of buildings, a cooling pond and a railway network. Production later ceased in 2002 and it was demolished in 2007. [Au(adp)]

NORTHUMBRIA UNIVERSITY, NORTHUMBERLAND ROAD*Northumbria University, Northumberland Road, Newcastle upon Tyne. Archaeological Desk-based Assessment*

Parker, J Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An archaeological desk-based assessment was carried out and revealed that the site was located outside the medieval town walls and 500m south-east of the St Mary Magdelene's Leper Hospital. There was no evidence for activity within the site until the 19th century when the site was occupied by garden plots to the Pandon Burn. These plots contained buildings by the time of the 1st Edition Ordnance Survey Map. By 1898 the Pandon Burn had been culverted and the site cleared. One building had been erected on the east side of the site. By 1915, Northumberland Road was documented and extended beyond the public baths. The site was fully built upon by 1919. During the 1930s, the buildings were demolished to make way for a school, which was later taken over by Northumbria University and was established in 1969 as Newcastle Polytechnic College. [Au(adp)]

SWAN HUNTER SHIPYARD, WALLSEND*Archaeological Appraisal. Swan Hunter Shipyards, Wallsend*

Speed, G Barnard Castle : Northern Archaeological Associates, 2007, 10pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The Swan Hunter site was crossed by part of Hadrian's Wall, a designated World Heritage Site. Although the remains of the wall that were thought to exist within the site were not Scheduled, they were likely to have been considered of national importance. Development would not be allowed to have a direct impact on the remains, however, it was thought that the remains offered to display or set out the lines of the wall within the site, this being a beneficial impact of redevelopment. There was a high potential for important and well preserved Roman remains to be located at the site, and as such, a detailed programme of archaeological mitigation and preservation was essential. EASTLANDS, ELMFIELD ROAD, GOSFORTH*Eastlands, Elmfield Road, Gosforth. Documentary Research*

Carlton, R J Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 10pp, figs

Work undertaken by: The Archaeological Practice Ltd.

A documentary research assessment was carried out and revealed the ownership of the site from 1899 onwards. The building retained its function as a private residence up to the Second World War by which time it had become the offices of the Parole Electrical Plant Co. From 1947 it became a student hostel. Eastcliffe and Westcliffe, later collectively known as Eastlands, have been unoccupied since at least 1995. Moorlands, the adjacent property, was constructed earlier in the 19th century but was not linked with Eastcliffe/Westcliffe. [Au]

GALLOWGATE (TYNE BREWERY), NEWCASTLE-UPON-TYNE*Gallowgate (Tyne Brewery), Newcastle upon Tyne. Archaeological Desk-based Assessment*

Randerson, M Durham : University of Durham, Archaeological Services, 2007, 47pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

There were no historic or statutorily protected buildings in the vicinity of the site. The structures on site were of 19th and 20th century date. The Scheduled Ancient Monuments of Newcastle city walls and the Blackfriars precinct lay to the south-east, and the World Heritage Site of the Hadrian's Wall corridor was to the south. All these features were outside the study area. There was no indication that the proposed development area was occupied during the prehistoric period. The study area lay to the north of the Hadrian's Wall corridor, and it was

unlikely that Roman remains existed upon the site. During the medieval and early post-medieval period, the area lay outside the core of Newcastle, and the site was occupied by open fields. The site was developed during the Victorian era and the 20th century, and the

study area had previously been the location of a flour mill, a glue factory, and a bakery, whilst the public house of the Bay Horse Inn stood on Gallowgate, on the east boundary of the site. Terraced housing covered the boundaries with Hill Street, to the north, and Wellington Street, to the west. The brewery later expanded to cover the whole of the study area. The construction of the bottling and canning plants had resulted in extensive truncation of the whole of the study area. It was felt to be highly unlikely that any underlying archaeological remains would have survived this truncation, and those that may have would have been of limited significance. A scheme for recording the standing buildings of the former Tyne Brewery complex had been laid out by the Tyne and Wear County Archaeologist. [Au(abr)]

INTO-UNIVERSITY OF NEWCASTLE

INTO-University of Newcastle Built Heritage Assessment

Scott Wilson Bristol : Scott Wilson, 2007, 38pp, pls, figs, refs

Work undertaken by: Scott Wilson

A desk-based assessment found that buildings first appeared on the site during the post-medieval period, the medieval development of the town being largely restricted by the town walls. Located within the university campus were 11 Listed Buildings, all designated Grade II. Six of these buildings were located within the University Quadrangle, representing the historic core of the institution. These structures dated from the late 19th to early 20th centuries and were arranged around the locally Listed Central Quadrangle, laid out between 1947-9 by the Professor of Town and Planning and into which all the buildings were focussed. The proposed development site contained a single Listed structure and one locally Listed Building. [Au(adp)]

LAND TO THE WEST OF PERCY STREET

INTO University of Newcastle-upon-Tyne, Land to the West of Percy Street; Archaeological Desk-based Assessment

Aspden, D Bristol : Scott Wilson, 2007, 40pp, figs, tabs, refs

Work undertaken by: Scott Wilson

An archaeological desk-based assessment was carried out to establish the potential for the presence of archaeological remains at the site, particular in relation to a burial ground shown on Charles Hutton's plan of Newcastle-upon-Tyne produced in a survey of 1770. Documentary and cartographic evidence provided confirmation that the burial ground was fully excavated in 1894 and established the location of the re-interred human remains. It also indicated the potential for buried archaeological remains relating to the medieval and post-medieval development of Percy Street within the eastern limit of the proposed development area. NEW MUSIC BUILDING, KING'S WALK, NEWCASTLE-UPON-TYNE*New Music Building, King's Walk, Newcastle-upon-Tyne. Archaeological Desk-based Assessment*

Davies, E Durham : University of Durham, Archaeological Services, 2007, 28pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Department of Archaeology

The assessment found that there were two historic or statutorily protected buildings of 19th and 20th century date in the immediate vicinity of the site, with a further 24 within 200m. The first evidence of occupation of the site was during the medieval period, when it was probable that a series of tenements were present. This development may have been destroyed in 1644 in the defence of Newcastle during the English Civil War, and subsequently redeveloped. It was thought that the development proposals had the potential to impact upon archaeological remains, and as such an evaluation was recommended. [Au(adp)]

THE COOPERAGE, 32-34 THE CLOSE, NEWCASTLE-UPON-TYNE*The Cooperage, 32-34 The Close, Newcastle upon Tyne. Archaeological Desk-based Assessment*

Claydon, M Durham : University of Durham, Archaeological Services, 2007, 33pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

The site lay within a Conservation Area and there were several historic and statutorily protected buildings and Scheduled Ancient Monuments in the vicinity of the site. The Cooperage was a jettied timber framed building that dated from the 16th century. It was listed at Grade II*. Previous archaeological excavations showed Roman activity along the bank-side above the site. It was probable that the riverside was utilised at this time and archaeological resources related to this activity had the potential to survive. The Close was developed on land reclaimed from the River Tyne from the early 13th century onwards. The study area was occupied throughout the medieval and post-medieval periods by merchants' buildings. Nearby excavations had shown that plot boundaries and building foundations of the medieval occupation survived into the 21st century. Evidence for these buildings and their purpose was likely to have survived in undisturbed parts of the site. The proposed development had the potential to impact upon the archaeological resource through the construction of foundations and associated services. [Au(abr)]

LAND ADJACENT TO SPRING GARDENS PRIMARY SCHOOL, ALBION ROAD WEST, NORTH SHIELDS*Archaeological Assessment of Land adjacent to Spring Gardens Primary School, Albion Road West, North Shields. A Report to North Tyneside Council*

Walsh, D Barnard Castle : Brigantia Archaeological Practice, 2007, 23pp, colour pls, figs, refs

Work undertaken by: Brigantia Archaeological Practice

An archaeological desk-based assessment was carried out, and revealed that the site, prior to establishment as a cemetery, was in agricultural use. The cemetery was established in 1833 and was in operation until 1939. The section of the cemetery which fell within the area of the proposed development contained multiple burial plots in 1858 and would without doubt, still retain a large

quantity of human remains. The proposed development entailed ground disturbance down to a level of 1.5m. It was expected that burials, particularly in the light of the high levels of child mortality, would be encountered at a depth of 1.2m. In addition later burials post-dating 1870 were likely to have been encountered at a depth of 1.5m. It was clear that landscaping had occurred on the site to achieve the present level surface but since there was no obvious disparity with surrounding ground levels. This was not considered to be significant. [Au(adp)]

WALDO STREET, NORTH SHIELDS

Waldo Street, North Shields Archaeological and Cultural Heritage Assessment

Richardson, D S Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 30pp, colour pls, figs, tabs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

A desk-based assessment was carried out for the site and revealed that the site overlooked the New Quay Conservation Area, North Shields, which had its origins in the medieval period. In the thirteenth century, the settlement developed under the patronage of the Priors of Tynemouth and by 1290, had

increased to 100 houses. The quayside facilities saw much trade destined for Newcastle unloaded at Shields, which caused the Crown, angered at the loss of revenue, to close North Shields to trading vessels. By the 18th century the settlement at North Shields began to expand from the narrow strip of land between the cliff bank and the foreshore. A new town was built on the bank top and the area south of the proposed development site was eventually occupied by a rope manufacturer in the early 19th century, hence the name Ropery Banks. Later the area was used for terraced housing and the location of 'The Tyne Steam Packet Provident Society Club House', that had been nominated for the local draft list. Archaeological monitoring of the site during groundwork was recommended. [Au(adp)]

WALLSEND PARKS, WALLSEND, NORTH TYNESIDE

Wallsend Parks, Wallsend, North Tyneside, Tyne and Wear. Archaeological Desk-based Assessment
 University of Durham, Archaeological Services Durham : University of Durham, Archaeological Services, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

No evidence had been found for prehistoric, Roman or early medieval archaeological remains in the study area. Wallsend village was founded as a medieval settlement in the form of two rows of houses on either side of a wide green. This village plan was still largely unaltered at the end of the 19th century. Two large properties were present on the north side of the Green, Wallsend Hall to the east and the Red House to the west. Both had substantial ornamental grounds which, by the end of the 18th century, extended northwards across the burn. The Red House was bought and demolished by the owner of the Hall in 1882, its grounds added to those of the Hall. The original grounds of the Hall have been little altered since at least 1841, with the grounds of Red House more widely modified. Their northern boundary was extended northwards at various times during the 19th century, but then redefined southwards by the construction of Queen's Terrace. Much of the remainder of the grounds had been infilled with colliery waste since 1897, probably with material from the spoil tip of a former mine. A mine shaft was sunk in what would later become the south-east corner of Richardson Dees Park in 1786 and continued in operation until 1854. It was the focus for rescue attempts after the Wallsend Colliery disaster of 1835. Later, the area around the shaft was landscaped and only a slight mound survived to mark its location. Wallsend Park was founded in 1897 and extended three times before 1937. King's Road, which formed the eastern boundary of the park, appeared to be contemporary. Wallsend Park was renamed Richardson Dees Park in the 1960s. The general layout appeared to have been little altered since the park was founded, although a few features had been added in the southern half and the original bridges over the stream were replaced. The arboretum was laid out before 1937. Its north-west boundary had been encroached upon by widening of the Coast Road since that date, but otherwise this area remained unaltered since it was formed. ST. MARGARET OF SCOTLAND, HYLTON CASTLE ROAD, SUNDERLAND

St. Margaret of Scotland, Hylton Castle Road, Sunderland. Archaeological desk-based assessment and building recording

Randerson, M & Annis, R Durham : University of Durham, Archaeological Services, 2007, 48pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

The study site lay on the lands of the former Hylton Castle estate and the church and its attached hall were the first structures built. It was possible that medieval and post-medieval remains relating to the workings of the estate, or to the lost village of Newton, may have survived within the study area. A modern cemetery lay to the south of the church. [Au(abr)]

NEW CITY FLOORING, MARKET PLACE INDUSTRIAL ESTATE, HOUGHTON-LE-SPRING

New City Flooring, Market Place Industriad Estate, Houghton-le-Spring, Tyne & Wear. Archaeological Desk-based Assessment

Adams, J Durham : University of Durham, Archaeological Services, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

Cartographic evidence suggested that the north part of the study area was in use as farmland during the medieval and post-medieval period, however, the south part of the site was located directly to the rear

of the properties that once lined the Market Place. It was therefore possible that features relating to this may have been encountered in the south part of the site where there had been no 19th and 20th century development. The test pits indicated that an average of 2.2m of ash type material overlay the natural ground surface. It was therefore possible that below this an archaeological resource may have survived across the site. The proposed development had the potential to impact upon the archaeological resource through the construction of foundations and associated services. It was recommended that a scheme of archaeological monitoring should take place during groundwork, with a contingency arrangement for the collection of archaeological data or for small scale evaluation, if this should be required. RACECOURSE ESTATE, HOUGHTON-LE-SPRING

Racecourse Estate, Houghton-le-Spring, Tyne & Wear. Archaeological Desk-based Assessment

Armstrong, J Durham : University of Durham, Archaeological Services, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

Houghton Hall was a Grade II Listed Building whose grounds formed part of the northern boundary of the proposed development area. The northern boundary of the study area was the south edge of the Houghton-le-Spring conservation area, but lay within the HER boundaries for the town. There were no Scheduled Ancient Monuments close to the site. There were no indications that the proposed development area was occupied during the prehistoric or Roman periods but evidence of occupation had been found in the wider area. Cartographic and documentary evidence suggested that the study area was in use as farmland during the medieval and post-medieval periods. It was possible that medieval structure relating to properties immediately to the north of the proposed development area may have existed in the northern part of the area. The tomb of Robert Hutton originally lay within the area of the proposed development. Although the tomb was moved to Houghton church in the early 20th century to allow the construction of the Racecourse Estate, it was possible that fragmentary human remains may still have been present in the north-west part of the site. Structural remains of the tomb, and a fully articulated horse skeleton also had the potential to be present in this area. Although much of the proposed development area was developed in the 20th century, this part of the site did not appear to have been built upon, and may have been protected by the creation of an artificial bank, so the potential for survival was good. Structural remains of the late 19th century Long Riggs Farm may have been present in

the north-east part of the site, and may also have been protected by made ground. The geotechnical survey indicated that at least 0.55m of modern made ground overlay the natural ground surface. It was therefore possible that below this an archaeological resource may have survived across the site. The proposed development had the potential to impact upon the archaeological resource through the construction of foundations and associated services. [Au(abr)]

DOXFORD HOUSE STABLES, WARDEN LAW LANE, SILKSWORTH, SUNDERLAND

Doxford House Stables, Warden Law Lane, Silksworth, Sunderland. Archaeological Desk-based Assessment and Building recording

Annis, R & Adams, J Durham : University of Durham, Archaeological Services, 2007, 31pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

There was limited evidence of early activity at this site. The historical interest of the site lay in the extant buildings, which were of 19th century date. It was possible that traces of the east range if buildings, including the old post office, survived under landscaping material to the east of the study area. While the stable was an integral part of the Doxford Hall group, it was of little interest or significance in itself. Major alterations had been made to its interior, and its former setting, with a drive to the north and east, had been lost through changes to the adjoining garden. No further work was recommended in connection with this development. [Au(adp)]

DOXFORD HOUSE, WARDEN LAW LANE, SILKSWORTH, SUNDERLAND

Doxford House, Warden Law Lane, Silksworth, Sunderland. Archaeological Desk-based Assessment and Building Recording

Adams, J, Beveridge, J, Swann, N & Annis, R Durham : University of Durham, Archaeological Services, 2007, 63pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

There was little beyond the decorated ceilings that could be confidently ascribed to William Johnson's original Grade II* Listed house of the 1750s, though it was clear that much of the brick structure must be ascribed to that building. The bulk of the present building was of early 19th century date, significantly altered and repaired in the 20th century. Essentially, what was seen at the time of the survey was a reduced stump of the house that had stood here in its heyday before the first World War. The removal of the service quarters, while useful for potential re-use of the building, had significantly reduced the historic interest of the building. The south lodge was in separate private ownership and the west lodge was part of the Council run park. The house was in an extremely poor state of repair. [Au(adp)]

JAMES WILLIAM STREET, SUNDERLAND

James William Street, Sunderland, Archaeological Assessment September 2007

Carlton, R J & McRae, C Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 51pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

An archaeological desk-based assessment was carried out and revealed that the area of James William Street was part of the original settlement of Wearmouth, dating back to the early medieval period. The area of proposed development was included in the medieval tofts of Wearmouth but it seemed that it was not until the early 18th century when the town started to expand rapidly that the site was built upon. Buck's Plan of 1728 was the first cartographic evidence of this development. [Au(adp)]

LAND AT NEIL STREET, EASINGTON LANE, SUNDERLAND

Land at Neil Street, Easington Lane, Sunderland, Tyne and Wear. Archaeological Desk-based Assessment

Claydon, M Durham : University of Durham, Archaeological Services, 2007, 33pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

Although there were no direct indications that the proposed development area was occupied during the prehistoric and Roman periods, the Tyne and Wear region was widely settled at this time. The discovery of a prehistoric flint flake in the near vicinity of the proposed development area demonstrated the potential for deposits to be present. During the medieval and post-medieval period the proposed development area may have been used as agricultural land. Due to a lack of 19th and 20th century development, archaeological deposits from earlier periods had the potential to survive. The proposed development had the potential to impact upon any surviving archaeological resource through the construction of foundations and associated services. No archaeological deposits were identified which required preservation in situ. [Au(abr)]

GARDEN INN SITE, SUNDERLAND

Garden Inn Site, Sunderland. Archaeological Assessment

Carlton, R J Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 46pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

A desk-based assessment was carried out for the site and revealed that while there was no direct evidence that the site was developed earlier than the early 19th century, its topographical and contextual position in close association with St. Michael's Church meant that it may have been occupied or used during earlier periods. Furthermore amongst the surviving buildings on the site, the present Grade II Listed offices and adjacent remains of a mid-19th century house were of local and perhaps wider cultural heritage significance, while the walls of Fulwell limestone associated with the house were also of interest. The later buildings on the site were of little significance. [Au(adp)]

HYLTON CASTLE HEALTH CENTRE, COLERIDGE ROAD, SUNDERLAND

Hylton Castle Health Centre, Coleridge Road, Sunderland. Archaeological Desk-based Assessment

Adams, J Durham : University of Durham, Archaeological Services, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

There were no indications that the proposed development area was occupied during the prehistoric or Romano-British periods. The study area lay within the former grounds of Hilton Castle Estate. Hilton Castle, Chapel and grounds were a Scheduled Ancient Monument, of medieval date. It was possible that the study area was occupied or utilised during the medieval and post-medieval periods. The cartographic sources examined suggested that farm buildings were present to the west of the castle, close to Washington Road. Within the footprint of the Health Centre some truncation to the archaeological resource would have taken place, as this area had been levelled by cutting into the natural slope of the land, however, the extent of this was unknown. It was possible that an archaeological resource may have survived in the areas to the north, south and east below the made ground deposits. This resource may have related to farm buildings, pits and other associated features of medieval and post-medieval date. It was suggested that any work that required disturbance to the ground surfaces, such as the cutting of foundation and service trenches, should be made the subject of archaeological monitoring. Archaeological Desk Based Assessment of Jireh Chapel, Grindon, Sunderland

Carey, CBakewell : Archaeological Research Services, 2007, 32pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Research Services

The desk-based assessment revealed that the site may have been located within the former extent of the deserted medieval village. There was also evidence for prehistoric activity to the south of the study area at Hastings Hill. The study area itself remained rural until the 1960s when it was converted to a residential area. The potential for medieval, post-medieval and even prehistoric archaeology to have remained within the site exists, but the impact of recent developments may have destroyed any archaeological features. W A Fairhurst & Partners Leeds : W.A. Fairhurst & Partners, 2007, 10pp

Work undertaken by: W A Fairhurst & Partners

There were no sites of protected status within or surrounding the proposed development area. There was no direct evidence for activity within the assessment area during the prehistoric and Romano-British period. Stray finds and monuments dating from the Neolithic, Bronze Age and Romano-British periods had been recorded in the wider vicinity. There is no activity from the medieval period in the study area. The assessment area remained part of farmland associated with Middle Barmston Farm with field boundaries suggesting that it had been enclosed or redivided in the 18th century. Some merging of these field boundaries occurred during the early part of the 19th century, but thereafter the pattern of fields remained unchanged until the later 20th century when a field boundary in the south part of the site was removed possibly at the same time as the creation of the adjacent Wildfowl Park. Due to modern development in the area it was likely that they had impacted upon any archaeology. Agricultural activity was the only activity known to have occurred on the site, namely a field boundary of probable 18th century origin. [Au(adp)]

FORMER HIGH USWORTH SCHOOL, WELLBANK ROAD, WASHINGTON*Former High Usworth School, Wellbank Road, Washington Archaeological Desk-based Assessment*

Scott, J Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 28pp, colour pls, figs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

The desk-based assessment revealed that there was a possibility of some evidence of the medieval village surviving on the site, and also a possibility that earlier prehistoric remains could be discovered. Normally a geophysical survey would be recommended in order to ascertain the survival of any subsurface archaeological features. However, the construction of the former school buildings and the levelling of large areas of the site in order to create the school playing fields meant that this form of investigation was unlikely to be successful. As such a watching brief was recommended during the

ground disturbing elements of the proposed development in order to identify and record any surviving archaeological remains. [Au(adp)]

St. Peter's Wharf, Monkwearmouth, Sunderland Archaeological Desk Based Assessment

Under Construction Archaeology Leeds : Under Construction Archaeology, 2007, 55pp, colour pls, figs, tabs, refs

Work undertaken by: Under Construction Archaeology

An archaeological desk-based assessment was carried out and revealed that the site lay next to a Grade II Listed Wearmouth Road bridge and rail bridge and was in the vicinity of the candidate World Heritage Site of Monkwearmouth and Jarrow Monastic Sites. There was little evidence for the use of this site prior to the 18th century, although it was likely to have been in use at least on an occasional basis for riverside activities. Cartographic and historical sources showed the development of the site during the 18th and 19th centuries as timber yards, sawmills and iron works. Other uses included employment for ship repairing and residential buildings and a church on Bonner's Field. Over time the riverside had been built out into the River Wearmouth and early riverside activities may have been preserved below substantial deposits of made-ground. In order to characterise and establish the survival of earlier activities on the site, a programme of archaeological investigation was recommended. [Au(adp)]

HIGH PIT FARM, EAST CRAMLINGTON

High Pit Farm, East Cramlington, Northumberland. Archaeological Desk-based Assessment

Platell, A Durham : University of Durham, Archaeological Services, 2007, 25pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Department of Archaeology

This report presented the results of an archaeological desk-based assessment, conducted in advance of a proposed development at East Cramlington Farm (also known as High Pit Farm). The assessment comprised a search of pertinent documentary and cartographic records, and a field visit. No medieval or earlier archaeological remains were known to exist in the proposed development area. While it was possible that an as yet undiscovered

resource of such date survived on the site, it would be likely to have been heavily disturbed by later building activity. A small part of the northern end of the main standing building probably predated 1838. The remainder had been built in a number of stages since that date, with most of the development having taken place during the 19th century. The buildings were to be retained and converted to residential use by the proposed development. They should be subject to a simple photographic record prior to development. [Au(abr)]

LAND AT BATTLE HILL, HEXHAM***Archaeological Desk-based Assessment of Land at Battle Hill, Hexham, Northumberland***

North Pennines Archaeology Ltd Alston : North Pennines Archaeology Ltd., 2007, 18pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

The assessment identified that the development site remained as a backplot for the properties fronting Battle Hill and St. Mary's Chare until a series of small workshops and outbuildings were constructed. These dated between 1844 and 1860. At some time between 1860 and 1897, these were replaced by an L-shaped building that survived until at least 1920. Much of the eastern part of the area remained undeveloped after this period, giving this part of the site a good potential for the discovery of medieval and post-medieval remains. Further work was recommended in the event that any future development should be carried out. [Au(adp)]

KIRKHARLE WIND FARM***Kirkharle Wind Farm. Cultural Heritage Baseline Report***

Hind, D Kelty : Damien Hind, Archaeology & Heritage Consultant, 2007, 75pp, colour pls, figs, tabs, refs

Work undertaken by: Damien Hind, Archaeology & Heritage Consultant

A desk-based assessment and walkover survey were carried out on the site of a proposed wind farm. The site was divided into two areas, both to contain four wind turbines and associated infrastructure. SMR research and an aerial photograph review concluded that there was very little in the way of archaeological activity at the site. In the northern area, three groups of structures were identified, comprising two small farming units and a sheepfold. Remains of a lime quarry, ridge and furrow field patterns and relict field boundaries were noted. The development would not affect these features. The southern area contained plough-damaged ridge and furrow, only visible from the air. [Au(adp)]

GREEN LANE, CASTLE LEVINGTON, NEAR YARM

Green Lane, Castle Levington, near Yarm, Stockton-on-Tees. Archaeological Desk-based Assessment

Adams, J Durham : University of Durham, Archaeological Services, 2007, 27pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

Historic documents recorded a Civil War skirmish near Yarm, although the exact location of the site was unknown. It had been suggested that it took place to the west of the proposed development area, where two cannon balls were found, but there was no other evidence to support this. Archaeological deposits relating to the medieval and post-medieval period may have survived over the site. This evidence was likely to relate to ridge and furrow ploughing, outbuildings, rubbish disposal and boundary features. Because of a lack of 19th and 20th-century development, archaeological deposits had the potential to survive. The proposed development had the potential to impact upon the archaeological resource through the construction of foundations, associated services and changes to the level of the ground surface. NEWLANDS BECK & RIVER DERWENT RESTORATION PROJECT, LAKE DISTRICT NATIONAL PARK*Newlands Beck & River Derwent Restoration Project, Lake District National Park Historic Landscape Analysis April 2007*

The Archaeological Practice Ltd Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 37pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

An assessment of historic landscape was carried out and with the principal objective to reduce the rate of sedimentation in the lake. Secondary objectives included reducing pollution of the lake water by phosphorous and improving the ecology of the lake. There were areas of archaeological sensitivity. Around the river Derwent, for example, the immediate environs of How Farm were noted, and may have been of Scandinavian or post-conquest origin. The site of Armatrigg Hill, whose name suggested a Scandinavian origin, plus remains of an earlier version of High Stock Bridge in the vicinity. The line of the Cockermouth, Keswick and Penrith railway, the course of the possible Roman road along the east side of the river Derwent was traced using aerial photographs. Cropmark sites to the east of the river were also recorded. In Newlands Beck the line of the Keswick-Whinlatter Roman road, the environs of Bog House, the course of the former turnpike, an early modern and possibly medieval road between Braithwaite and Portinscale were found. Braithwaite Bridge settlement site (later called Newlands Beck Bridge) and the line of the Cockermouth, Keswick and Penrith Railway were deduced from cartographic sources. No evidence was found to substantiate the suggestion that the flood banks were created under the auspices of Fountains Abbey in order to expand the area of land under cultivation. Fountains Abbey was active within the study area and the medieval era was a period of agricultural expansion, but the 1st edition Ordnance Survey did not show any trace of embankments along the Newlands Beck which should imply that the earthworks were of more recent construction. BRAYTON PARK, ASPATRIA***Report on an Archaeological Metal Detector Survey at Brayton Park, Aspatria, Cumbria***

Cracknell, P Cockermouth : Historic Building Survey and Archaeological Illustration (HBSAI), 2007, 33pp, pls, figs, refs, CD

Work undertaken by: Historic Building Survey and Archaeological Illustration (HBSAI)

An archaeological desk-based assessment and metal detector survey was carried out. The proposed scheme was for holiday chalets spread across a large field within the grounds of Brayton Park. At some date before 1790 an Anglo-Scandinavian brooch of late ninth century or early tenth century date was discovered near the estate fish pond, which was only c.50 metres to the south of the area of the proposed development. Brayton Park was shown on an 18th century estate map as a deer park and designed parkland associated with the now demolished Brayton Hall, a Georgian/Victorian mansion gutted by fire in 1918, but there had been a manor at Brayton from the medieval period. In addition, there was evidence for earlier activity near to the present site, shown by the cropmarks around the site and the documentary research, which indicated the presence of prehistoric settlement, medieval settlement, burial practices and agricultural use. At nearby Aspatria, the church housed a good collection of Anglo-Scandinavian stone sculpture of ninth/tenth century date and the excavation of a barrow at nearby Beacon Hill produced a good collection of metalwork, again of ninth/tenth century date. The present site was mostly woodland from at least the eighteenth century until the second half of the twentieth century. While the metal detector survey of the site produced over 150 individual finds, the majority were modern. Only c. 30 finds were of any real interest and all were the result of casual loss rather than the result of deliberate deposition. With the exception of one find, possibly medieval in date, and one coin of Queen Anne (1702-14), all of the finds dated to the last two hundred years. In addition, there was no visible evidence within the field for any buildings or settlement. The documentary research and metal detector survey revealed nothing that should stand in the way of the proposed development at the site. [Au(adp)]

MARYPORT LIFEBOAT STATION***Maryport Lifeboat Station, Maryport, Cumbria. Archaeological Desk-based Assessment***

Platell, A Durham : University of Durham, Archaeological Services, 2007, 22pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

The proposed development area was located on land that had been formed by coastal deposition within the last 250 years. There was no potential for earlier structural remains to be present. While earlier spot finds could in theory be present, they would have been likely to have been heavily disturbed by later development of the site. The jetty to the north of the proposed development area was possibly of 18th century construction. The remainder of the site dated from construction of the Campbell Dock in the 1830s and its modification into Elizabeth Dock in the 1850s. Railway sidings on an embankment, with a stone retaining wall to their east, were present by 1866. This retaining wall survived, although it had been

incorporated into later buildings. The railway sidings and embankment had been removed by later activity. An octagonal Lookout House was present by 1866 with the Lifeboat House being constructed shortly after. Both of these buildings still survived, although the Lookout House (later in use as a Coastguard Station) had been moved from its original position. All other buildings in the study area were of recent construction. A coastal gun battery was present on the site in the 19th century. This had been removed and the site levelled. [Au(abr)]

48-50 ENGLISH STREET, LONGTOWN*An Archaeological Desk-based Assessment for a Site at 48-50 English Street, Longtown, Cumbria.*

Cracknell, P Cockerham : Historic Building Survey and Archaeological Illustration (HBSAI), 2007, 22pp, figs, tabs, refs, CD

Work undertaken by: Historic Building Survey and Archaeological Illustration (HBSAI)

An archaeological desk-based assessment was carried out at 48-50 English Street, Longtown. Modern Longtown only appeared in the later eighteenth century following the construction of the present bridge over the River Esk in 1756. The northern part of the town was laid out as a planned "new town", by the Reverend Robert Graham of nearby Netherby Hall, from 1757 onwards, in a formal grid pattern with four principal streets running east/west off the main arterial spine. The buildings were set in wide streets in terraces of two-storeyed, three-bay lime-rendered houses of cobble and rubble construction, with regular opening patterns of sash windows and central panelled doors, all under common slate roofs. This gave the northern part of Longtown a strong architectural unity which still characterises the town to the present day and, while the number of Listed Buildings was relatively low, the integrity of the design gave it a very high degree of architectural interest. The line of English Street, which was a continuation of Main Street, only appeared to have been laid out in the late eighteenth century and the southern half of Longtown developed during the first half of the nineteenth century. There had only been a limited amount of archaeological excavation in the town and it remained unclear as to the location of the earlier medieval or post-medieval settlement at Longtown. The original ford across the River Esk, before the erection of the bridge of 1756, was located at the western end of Esk Street and it would seem likely that the earlier settlements would have stretched either eastwards or southwards along the river bank from that point. Roy's Military Survey of Scotland, dating to 1747-55, showed a linear development along a single east-to-west-aligned street, probably on the line of Esk Street and Swan Street. Excavations in this area of Longtown at Netherby Street and Bank Street had failed to produce any evidence for the earlier medieval or post-medieval settlement. However, this would appear to be the most likely area for the earlier settlement, within an area of the new town of 1757, and replaced by it. The current site on English Street lay well beyond the boundaries of either of the two suggested areas of early settlement. In 1770, at the date of the Hodkinson and Donald map, this area of the town was open farmland and, based on the documentary evidence, the archaeological potential for the area appeared slight. Beaty, J Alston : North Pennines Archaeology Ltd., 2007, 29pp, colour pls, figs, tabs, refs
Work undertaken by: North Pennines Archaeology Ltd.

An archaeological desk-based assessment was carried out and revealed that there were no HER records for the study area immediately around the site. Extra information was gathered from the immediate vicinity, defined as a c.500m radius area, however, the proximity of the site to Stanwix Fort, Etterby Wath and the medieval settlement of Etterby showed the potential for discovering archaeological remains. Due to the significant number of important archaeological remains within the vicinity, any development had the potential to directly impact on a number of archaeological sites. [Au(adp)]

LAND AT HARRABY HILL, CARLISLE*Archaeological desk-based assessment of Land at Harraby Hill, Carlisle, Cumbria*

Wooler, F Alston : North Pennines Archaeology Ltd., 2007, 69pp, pls, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological desk-based assessment revealed that the earliest known use of the site dated to the Roman period, when a cemetery lined the main road into the city from the south. The site continued to be a significant place throughout the medieval period as there was documentary evidence of this having been the site of the gibbet, hence its alternative name of Gallows Hill. During the siege of Carlisle in 1644-45 this was the site of one of the four major works which were strategically placed around the city to prevent supplies reaching those within the city walls, therefore there was a possibility that archaeological remains relating to its use as a fortified site from this period may have survived. The city's reservoir, built on the site, might have obliterated any earlier features. [Au(adp)]

LANDSCAPE AREA D1*Cultural Heritage Desk Based Assessment for Landscape area D1*

Bethell, P Sellafield : Sellafield Ltd, 2007, 39pp, figs, tabs, refs

Work undertaken by: WS Atkins Heritage

The desk-based assessment was undertaken in order to use the site as a temporary store for clean, inert spoil excavated inside the Sellafield Nuclear Licensed Site and as a result, an assessment of the cultural heritage resources within 1km radius of area D1 was undertaken. Any known cultural heritage resources within the study area have been noted and an assessment made of the likelihood of encountering as yet unknown cultural heritage resources within area D1 itself during the course of the proposed works. Although there were no recorded cultural heritage resources in D1, it was concluded that the cultural heritage background, especially the activity noted in the area from the prehistoric periods (Mesolithic, Neolithic, Bronze Age, Iron Age), suggested a high probability that prehistoric material would be encountered in D1 and affected by the proposed development. A plan for further investigation was drawn up to enable appropriate mitigation to be planned. [Au(adp)]

MARTINDALE, LAKE DISTRICT NATIONAL PARK***Archaeological Rapid Desk-based Assessment and Walkover Survey at Martindale, Lake District National Park, Cumbria***

Peters, C Alston : North Pennines Archaeology Ltd., 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

A rapid desk-based assessment and a walkover survey was carried out at the site and revealed that habitation of the valley of Martindale could be traced back to the Neolithic period with no discernible break in settlement since that time. It showed that the present landscape of dispersed small farms surrounded by rectilinear fields in the base of the valley and surrounded by open fellside to the south east and west could be traced directly back to the early 17th century when the present farmhouse dwellings were built. These early 17th century dwellings probably replaced medieval long barns on the same plot of land, as did St. Martin's Church, that served the farming community. Thus the medieval landscape would have looked very similar to the present day. The proposed electricity cable would not affect any visible archaeology. [Au(adp)]

Lewthwaite and Townley's Yard, Cross Lane, Kendal, Cumbria. Archaeological desk-based assessment

Dawson, J Ulverston : Greenlane Archaeology Ltd, 2007, 35pp, pls, colour pls, figs, refs, CD
Work undertaken by: Greenlane Archaeology Ltd

An archaeological desk-based assessment was carried out and revealed that the site was situated at the west end of the medieval burgage plots running off Kirkland and that previous intrusive work in the general vicinity had identified truncated medieval deposits but no medieval features. The earliest standing building present on the site currently forming the main part of Lewthwaite and Townley's workshop and facing onto Cross Lane dated back to at least as early as 1770. The buildings were used as wool stapler's warehouse until the early 20th century and later as a bakery and more recently as builders and joiners workshops. [Au(adp)]

DREYFUSS VILLAGE (FORMER CIBA SITE) ASHTON NEW ROAD***Archaeological Desk Based Assessment Dreyfuss Village (Former CIBA Site) Ashton New Road, Manchester***

Chadwick, P & Dicks, S London : CgMs Consulting, 2007, 37pp, pls, figs, refs

Work undertaken by: CgMs Consulting

An archaeological desk-based assessment was carried out at the site and revealed that the site was used as common grazing land until at least the 1820s. Coal mining took place on and close to the site, and following the construction of the Ashton Canal the rapid growth of the Lancashire cotton industry and

the urbanisation and growth of Manchester in the late 18th century, conditions led to an exceptional period of growth, industrial innovation and commerce. Clayton Mill (Fustian Mill) within the western part of the site had probably been built at a similar time to the Clayton Arm of the Ashton Canal although little information about this mill had survived. In 1877 Clayton Aniline Works were constructed on the site. Over the following century CAC developed the whole of the study site for the manufacture of dyestuffs and many of the works buildings were rebuilt in the 1960s to keep up with modern industrial practices. The site of Clayton Colliery, Clayton Cotton Mill and the 19th century Aniline Works were recorded in the Greater Manchester SMR as being of industrial archaeological interest. [Au(adp)]

SPINNINGFIELDS PLOT 104, MANCHESTER

Spinningfields Plot 104, Manchester An Archaeological Desk-based Assessment

Arrowsmith, P & Gregory, R Manchester : University of Manchester Archaeological Unit, 2007, 34pp, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological desk-based assessment was carried out at the site and revealed the area was developed in the late 18th to mid 19th century when workers' housing was built here as part of the expansion of the industrial city of Manchester. This housing was built over and partly respected the boundaries of an earlier field system, enclosed by the post-medieval period. The study area also included part of the site of a late 18th century walled compound which functioned as a hide and skin yard in the mid 19th century. [Au(adp)]

LOWER BROUGHTON***Lower Broughton Archaeological Desk-based Study Desk Based Assessment***

Finch, NLeeds : Scott Wilson, 2007, 80pp, colour pls, figs, tabs, refs

Work undertaken by: Scott Wilson

An archaeological desk-based assessment was carried out and revealed that there was potential for Roman activity in the site as there had been activity surrounding the area of development. Crofton's map gave an indication of the layout of medieval furlongs in the area. Physical evidence for medieval activity was scant apart from chance finds of pottery sherds. Geotechnical investigations suggested that there was a minimum of 6m of made ground in this area, therefore it was unlikely that any of the current development proposals would impact upon potential archaeological horizons. There is evidence for post-medieval activity and late 20th century is represented by redevelopment. [Au(adp)]

NEOLITHIC AND BRONZE AGE SETTLEMENT IN MANCHESTER***The Settlement Geography of the Neolithic and Bronze Age in Greater Manchester Part 1***

Lunn, K Manchester : Karl Lunn, 2007, 93pp, colour pls, figs, tabs, refs

Work undertaken by: Karl Lunn

An assessment of the settlement geography of the Neolithic and Bronze Age on Greater Manchester was carried out. The wetlands would have been constantly exploited as hunting grounds. This was inferred due to lithic distribution patterns. Evidence of episodic woodland clearance in the Neolithic and of arable farming in study areas 1 and 2 due to lithic and pollen evidence was recorded. Burnt stone areas hinted at textile processing. Settlements would be anticipated to be on higher ground such as Highfield Moss. [Au(adp)]

THE BURIAL PLACE OF THE LAKOTA SIOUX "SURROUNDED", MEDIA CITY, SALFORD***Media City, Salford Supplementary Report on the Burial Place of the Lakota Sioux "Surrounded"***

Arrowsmith, P Manchester : University of Manchester Archaeological Unit, 2007, 3pp

Work undertaken by: University of Manchester Archaeological Unit

Historical research was undertaken into the possibility that the proposed Media City development may include the site of the burial of the Lakota Sioux "Surrounded", who came to Salford as part of Buffalo Bill's Wild West Show in 1887 and died there during this visit. There was a possibility of him being

buried at the former race course in a Native American ceremony. The former racecourse site was later built over by Salford Docks, which would have caused considerable disturbance to existing ground levels. Development ground works would only cause localised disturbance through piling. It was understood that there would be no basements or deep foundation trenching. A newspaper article on the account of the Indian's death from Saturday 17th December 1887, mentioned the Indian as being a fine fellow of 6ft. 7ins. in height and as being buried at Brompton Cemetery, paid for by Colonel Cody. TIVIOT WAY, PORTWOOD, STOCKPORT

Archaeological Deskbased Assessment of Land at Tiviot Way, Portwood, Stockport

Dufton, A London : L-P: Archaeology, 2007, 41pp, pls, figs, refs

Work undertaken by: L-P: Archaeology

An archaeological desk-based assessment was carried out and revealed that the site did not fall within a designated Conservation Area, and there were no Listed Buildings or Scheduled Ancient Monuments within the area. The immediate vicinity did not see extensive activity during the prehistoric or Roman periods. During the medieval period the site area was likely within the grounds of the Duckenfield Estate. By the late 18th century the purchase of the estate by Thomas Harrison and construction of the Portwood cut led to the rapid industrialization of the area. Clay, sand and gravel extraction took place on site from the late 19th century. The Thomas Storey Tiviot Works were constructed in the mid 20th century and remained on site until their recent destruction. [Au(adp)]

Altair, Altrincham, Trafford, An Archaeological Desk-based Assessment

Arrowsmith, P Manchester : University of Manchester Archaeological Unit, 2007, 35pp, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological desk-based assessment was carried out at the site, which had been given over to agricultural use until the 19th century. By 1790 this land was crossed by a watercourse. Its straight course was clearly man-made but the origin of the feature was unknown. Alongside Moss Lane were a range of cottages and stables built in 1790. This developed into more housing and between 1852 and 1876 there were two rows of worker's housing. In about 1900 this was replaced by The Bridge Inn. Other housing was built on Oakfield Road on the eastern fringe of the site. In about 1897 a factory, which later became Oakfield House, was built. Until 1921 the site was occupied by a corset manufacturers. In 1899-1900, the premises were shared with Thornton film manufacturing company formerly Thornton Pickard. Other buildings contained works of Royles Ltd., a motor body builders and the furniture depository of John Wood and Sons Ltd. A mission hall was erected and later turned into a school. In the western side of the site lay the station and from the 1890s to 1950s was linked by a single track line to the gas works on Moss Lane to the east of the study area. [Au(adp)]

FRECKLETON STREET LINK ROAD, BLACKBURN***Freckleton Street Link Road, Blackburn, Desk-Based Assessment***

Newman, C Grange-over-Sands : Egerton Lea Consultancy Ltd., 2007, 34pp, pls, colour pls, figs, refs, CD

Work undertaken by: Egerton Lea Consultancy Ltd.

An archaeological desk-based assessment was carried out of the site. Within the study area, there were 16 sites of archaeological significance on which the scheme was likely to have an impact. In the vicinity of the study area were 12 other sites of known archaeological significance, which illustrated the range of monuments and remains associated with an important industrial town in the nineteenth century. They included an army parade ground, skating rink, a school on Byrom Street, and the site of the nineteenth century Grammar School. The sites of Chapel Street Congregational church, originally Blackburn's oldest non-conformist church, and a Roman Catholic church also lay adjacent to the study area. Industrial sites in the area included a foundry, a brewery and a mineral water works. Within the study area, the sites of most significance were 53 King Street, a Grade II Listed Building, the site of Blackburn's first Roman Catholic chapel and the site of the church and churchyard of St Peter. Number

53 King Street was of both architectural and historical importance. The two churches were of especial importance because of the associated burials, which had the potential to yield information concerning lifestyles and health in the nineteenth century. There were over 1,000 known burials in St Peter's churchyard, and there could have been several hundred more burials in the Roman Catholic graveyard. The north end of the study area, between King Street and St Peter's Street, was an area of late eighteenth and nineteenth century development and was likely to include a range of housing types from working-class cottages to large middle-class townhouses. There were also public buildings in this area, such as the County Police Station and Court, the vicarage to St Peter's, a spiritualist temple and a district nurses' home. South of the site of St Peter's was a public baths, and several streets of later nineteenth century terraced houses. In total, the study area contained a range of site types which would provide a valuable insight into the development of, and life within, one of Lancashire's most important industrial towns. RHYDDINGS PARK, OSWALDTWISTLE

Rhyddings Park, Oswaldtwistle. Cultural Heritage

Newman, C Grange-over-Sands : Egerton Lea Consultancy Ltd., 2007, 31pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Egerton Lea Consultancy Ltd.

A desk-based study of Rhyddings Park, Oswaldtwistle, was carried out to inform a proposal for the restoration of the park. The park began as the grounds to Rhyddings Hall, the mansion of Robert Watson, a major industrialist in Oswaldtwistle and an important figure in the 19th century community. The Hall was built next to the site of the Riddings, an estate which appeared to have had 16th century origins. The Riddings was pulled down to make way for Rhyddings Hall, and the land around it was landscaped to create pleasure grounds for the Hall. In 1909, the Hall and grounds were acquired as a public park for Oswaldtwistle,

and the Hall was soon after converted into an art gallery and museum. The park enhanced the existing designed landscape, with the addition of a range of ornaments such as a stone lantern, drinking fountain and a replica of the medieval market cross. Recreational facilities were also added, such as tennis courts and bowling greens. By the early 1930s, the park had acquired most of its key features. In 1938, however, the Hall was demolished and its site grassed over. [Au(adp)]

RSK Group Plc Helsby : RSK Group Plc, 2007, 105pp, colour pls, figs, tabs, refs

Work undertaken by: RSK Group Plc

A desk-based assessment identified 283 archaeological sites and three events. Of the archaeological sites, one was a Scheduled Ancient Monument and a Listed Building, one was a Historic Park and on was a Conservation Area, 53 were Listed Buildings and 227 were non-scheduled archaeological sites.

Of the 283 sites, 204 were too far from the route for any significant impact from the proposed pipeline construction. One site of high importance, the Trent and Mersey Canal, a Conservation Area, was crossed by the proposed pipeline. Forty-nine sites of medium importance (including Crewe Hall, a Grade II Registered Historic Park), twenty site sites of low importance and three sites of uncertain importance could potentially be impacted on by the proposed pipeline. The impacts on these 79 sites were discussed, and generic and site specific evaluation or mitigation measures proposed. During fieldwalking, 239 fields were visited, of which, 90% were surveyable. A further 23 fields were visited thereafter. Thirty-eight previously recorded areas or sites of archaeological interest were identified within 50m of the route corridor. A total of 53 areas of archaeological interest were further identified during the field surveys. These included anomalous uneven ground surfaces, which may have indicated buried remains, linear crop marks, areas of ridge and furrow agriculture, sunken or green lanes and former field boundaries. RINGMER TO GLYNDE AND DURHAM FARM TO SOUTH HEIGHTON

The Archaeological Background to Land Encompassed by the Ouse Valley Transfer Scheme Phases 2 & 3 (Ringmer to Glynde and Durham Farm to South Heighton)

Meaton, C Portslade : Archaeology South-East, 2007, 68pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

Archaeological background research was undertaken in advance of the new Ouse Valley Transfer Scheme. Two new pipeline routes were investigated between Ringmer and Glynde (Phase 2) and also between Durham Farm and South Heighton (Phase 3). A review of the SMR data revealed a large number of sites in the vicinity of both proposed routes, dating from the Neolithic through to the medieval period. Furthermore, an investigation of the cartographic evidence showed the rural landscape to have been relatively static during the post-medieval period, although a number of field boundary changes were noted; some of which were identified during the course of a walkover survey. This phase of work failed to identify any significant landscape features previously unrecorded, although an upstanding earthwork, most probably a 19th century railway siding, was found to lie to the west of the A26 along Phase 3 of the pipeline route. In summary, apart from the boundary changes and railway siding, no known sites were directly impacted by the proposed groundwork. However, both routes were immersed in important prehistoric landscapes, and similarly embedded within historic rural communities. As such, the potential for impacting previously unrecorded archaeological sites was high. [Au]

LAND SOUTH OF BODIAM CASTLE*Archaeological and Historic Landscape Survey. Land South of Bodiam Castle, East Sussex*

James, R & Whittick, C Portslade : Archaeology South-East, 2008, 103pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological and historic landscape survey was carried out at the site. The work involved a comprehensive review of existing primary and secondary historical and archaeological sources, with a particular emphasis on palaeoenvironmental sources and a landscape survey to identify and record features of archaeological significance. Five main categories of archaeological sites were identified, palaeoenvironmental deposits of at least regional significance, Romano-British settlement/industrial sites, sites of medieval buildings and associated crofts, post-medieval water management features and post-medieval boundaries. The study concluded that the site contained significant palaeoenvironmental deposits relating to the development of the Rother Valley and the wider Romney Marsh Area , and possible stratified Roman archaeological deposits of national importance. It also identified historical and archaeological themes that link the site with the remainder of the Bodiam property for the purposes of interpretation. [Au(adp)]

DOWN ROAD, BEXHILL*Archaeological Deskbased Assessment of Land at Down Road, Bexhill*

Richardson, L London : L-P: Archaeology , 2007, 22pp, figs, refs

Work undertaken by: L-P: Archaeology

A site was proposed for redevelopment and did not contain any Scheduled Ancient Monuments or Listed Buildings, nor did it fall within a council designated Conservation Area. The immediate vicinity of the site did not see extensive activity during the Prehistoric or Roman periods. During the early medieval period, a manorial complex was established in the hamlet of Bexhill, and a church was constructed by the early 12th century. Settlement remained small and scattered in scale throughout the medieval and early post-medieval period. The town of Bexhill-on-Sea developed out of a collection of small hamlets, scattered farmsteads and the main village with extensive new construction during the late Victorian and Edwardian period. The site area remained as common land until the early 20th century, at which point housing and a church were constructed close to the Down Road site. Given the distance of the site from the established settlement centre at Old Town Bexhill and the maintenance of the area as common land, the potential for significant archaeological remains being present on the study site was considered low. GUNTER'S LANE, BEXHILL*Archaeological Deskbased Assessment of Land at Gunter's Lane, Bexhill*

Richardson, L London : L-P: Archaeology, 2007, 21pp, figs, tabs, refs

Work undertaken by: L-P: Archaeology

A desk-based assessment found that the subject site was occupied by a school with associated playing fields. Examination of the available data indicated that the site did not contain any known archaeological deposits of national importance or any Scheduled Ancient Monuments. There was no known evidence to suggest there was any activity in the area of the study site in the Palaeolithic period. Some activity was noted in the study area from the Mesolithic and the wider landscape was likely exploited from this period forward. There was no evidence to suggest the site was a focus of settlement during these periods. Throughout the medieval and early post-medieval period the settlement of Bexhill was a small village with scattered satellite farms and cottages in the vicinity to the southeast of the Gunter's Lane site. The site area was likely held within the church lands of Bexhill Manor throughout this period for agricultural use. During the late Victorian period Bexhill increased in importance, however, the site area remained undeveloped throughout the post-medieval period until the early 20th century when the school and school playing fields were constructed on the site. Considering the potential for unexplored archaeology on site, there was a possibility that there may be a requirement for a programme of archaeological evaluation. [Au(adp)]

LAND AT WELBURY AND WOODHOLM FARMS, HAILSHAM*An Archaeological Desk-based Assessment of Land at Welbury and Woodholm Farms, Hailsham, East Sussex*

Short, J Portslade : Archaeology South-East, 2007, 52pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for a tract of land on the north-western outskirts of Hailsham. Development was proposed within an historic landscape, in which many of the field boundaries, areas of relict woodland and rural roads were likely to date back to at least the medieval period. However, a review of existing archaeological and historical sources suggested that the site had a generally low-moderate potential for containing archaeological deposits of all periods. The low instance of archaeological remains in the vicinity was considered to be partly due to the paucity of recorded archaeological fieldwork within the Hailsham area and may not have therefore accurately reflect the true archaeological potential of the Site. It was therefore suggested that a further programme of archaeological investigation take place, in order to obtain a more reliable indication of past human activity across the development area. It was anticipated that previous cultivation of the area, particularly during the 20th century, will have disturbed any surviving archaeological deposits across much of the site to an unknown extent. LAND AT ABBOTTS ANN***An Archaeological Desk-based Assessment and Walkover Survey on Land at Abbots Ann, Hampshire***

Meate, C

Portslade : Archaeology South-East, 2007, 67pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological desk-based assessment and walkover survey was conducted for three separate parcels of land in the village of Abbots Ann. A review of the SMR data and historical evidence showed a relative lack of prehistoric finds or sites within a one kilometre study area, although two possible cropmark based enclosure sites were identified close to the proposed site of the new school. This area was also situated over a probable palaeochannel, and was therefore considered to present moderate potential for prehistoric archaeology. Conversely, both the playing fields and existing school site were shown to lie within, or adjacent to the Anglo-Saxon and medieval village. Hence, both assessment areas were felt to show either moderate or high archaeological potential for these periods. A cartographic regression was also undertaken, which showed the post- medieval environment in and around Abbots Ann to have remained largely unchanged until the second half of the 20th century, when residential expansion was noted to the south of the village. Although detailed development plans were not presented for the proposed school relocation, recommendations for archaeological mitigation included fieldwalking, geophysical survey, trial trenching and a watching brief. Thorne, A Portslade : Archaeology South-East, 2007, 60pp, pls, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological desk-based Assessment and walkover survey was conducted on land at Kings Somborne Water Treatment Works. After assessment of the available evidence for the archaeological record it was considered that there was a generally low potential for most archaeological periods within the appraisal site. It had been shown that a post-medieval dairy house occupied the area of the water treatment works and, although this was likely to have suffered severe damage from the construction of the pumping station, associated deposits may have survived. LAND AT AVINGTON PARK, WINCHESTER*Archaeological Deskbased Assessment of Land at Avington Park, Winchester*

Hunt, G London : L-P: Archaeology , 2007, 67pp, pls, figs, refs

Work undertaken by: L-P: Archaeology

An archaeological desk-based assessment was carried out and revealed that the main archaeological potential of the site was for remains from the medieval period. The site lay close to the centre of a medieval village close to the site of the 18th century church, probably located on the site of the medieval church. The extent of the proposed development was small with the main impact coming from the construction of tanks and a small plant room. Small scale impacts would also be caused by the connection of the system to the existing buried sewers. [Au(adp)]

LAND AT SPRINGVALE ROAD/TUDOR WAY, KINGS WORTHY*Archaeological Desk-based Assessment of Land at Springvale Road/Tudor Way, Kings Worthy, Hampshire (2 Vols)*

Whitehead, B Southampton : Southern Archaeological Services Ltd 2007, 73pp, colour pls, figs, refs

Work undertaken by: Southern Archaeological Services Ltd

A desk-based assessment was carried out at the site where no specific development proposals had been made. The assessment showed that there were no archaeological features recorded on the site itself, but that there was a significant likelihood of Iron Age and Roman remains including a possible aqueduct extending into the site from a Scheduled Ancient Monument to the south of the site. Chance finds are known from the surrounding area. Cartographic evidence show that the site was farmland before it got developed for housing. [Au(adp)]

LAND AT MOUNT NOD, LONDON ROAD, GREENHITHE***Archaeological Walkover Survey and Assessment Report Land at Mount Nod, London Road, Greenhithe, Kent***

Hawkins, D London : CgMs, 2007, 24pp, colour pls, figs, refs

Work undertaken by: CgMs

An archaeological walkover survey and assessment in the form of a map regression exercise was carried out at the site and revealed that the site contained a number of locally important upstanding archaeological remains post-dating 1843. Existing site conditions, in particular the extensive tree and undergrowth cover, precluded the detailed recording of these features. It was recommended that a RCHM style Level I record was made of all the upstanding archaeological features on the site. A desk-based assessment identified the potential for underground archaeological deposits with the Palaeolithic and Roman periods most likely to be represented. A programme of archaeological evaluation was thought to be appropriate to test for buried archaeological remains, forming the third stage in the archaeological mitigation strategy. [Au(adp)]

LAND AT MAPLESDEN NOAKES SCHOOL, BUCKLAND ROAD***An Archaeological Desk-based Assessment of Land at Maplesden Noakes School, Buckland Road, Maidstone***

Short, J Portslade : Archaeology South-East, 2007, 53pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for a plot of land at Maplesden Noakes School, Maidstone. A review of existing archaeological and historical sources suggested that the site had a moderate potential for containing archaeological deposits of Iron Age, Roman and medieval date, although the site was considered to have a low potential for containing archaeological deposits of other periods. Agricultural activity, including the cultivation of hops and fruit trees, within the area during the 19th and 20th centuries, was likely to have disturbed archaeological deposits across much of the site to an unknown extent. CHILSTON ICEHOUSE, CHILSTON PARK, LENHAM

Chilston Icehouse ,Chilston Park, Lenham, Kent

James, P & Murray, J Portslade : Archaeology South-East, 2007, 37pp, colour pls, figs, refs

Work undertaken by: Archaeology South-East

An archaeological assessment of an icehouse at Chilston Park was undertaken. The aim of the work was to produce a definitive and up-to-date historical and archaeological assessment of the structure and assess its local and national significance. The work involved a review of readily available existing primary and secondary historical and archaeological sources and a landscape survey to identify and record features of archaeological significance within the property and its immediate environs. The report found that the icehouse was probably built in the latter half of the 18th century, but the available evidence was not sufficient to refine this date or to confidently assess the full character of the structure. As a result, further recommendations were made for a programme of archaeological fieldwork to address these issues. [Au(abr)]

FORMER RANK HOVIS SITE, MARGATE ROAD, RAMSGATE*Former Rank Hovis Site, Margate Road, Ramsgate, Kent. Archaeological Desk-based Assessment and Walkover Survey*

Boast, EJ Birchington : Trust for Thanet Archaeology, 2007, 60pp, pls, figs, tabs, refs

Work undertaken by: Trust for Thanet Archaeology

An archaeological desk-based assessment and walkover survey was carried out at the site and revealed that the site lay in an area of high to medium archaeological potential. Based on the distribution of remains in the landscape of the study area as a whole it was reasonably likely that archaeological remains could have been present on the site. The desk-based assessment also identified areas where there was no archaeological potential. These areas were the location of the construction of the original mill building, the location of the wheat silos and the removed railway bank and the location of the reservoir. There was a possibility that parts of a lime kiln of the industrial period survived. The lime kiln was likely to have been a deep cut feature and would have removed any earlier archaeological features on that part of the site. It was possible that other industrial period remains relating to the use of the mill survived, although it appeared that later extensions tended to be built on the site of previous structures removing all remains in the construction process. RANK HOVIS FLOUR MILL, RAMSGATE*Landscape Appraisal Rank Hovis Flour Mill, Ramsgate*

Lloydbore Landscape Canterbury : Lloydbore Landscape, 2007, 14pp

Work undertaken by: Lloydbore Landscape

A landscape appraisal was carried out at the site consisting of historical and photographic assessment. Before 1780, the site contained two windmills which took advantage of the site's position on an exposed ridgeline. Later, two lime works were located to the north of the site. The advent of steam in the 1860s created a triangle of land between the new railways and the main Margate Road and lime works, the southernmost part of which formed the appraisal site. The main brick mill building was developed by the Isle of Thanet Steam Flour Company in 1865 designed by Edward Pugin. Over time, the western portion of the site the original structures have been removed leaving a single brick shed and an extensive area of hard standing. The developments of the site over time and the alterations to the buildings have been complex leaving a legacy of two Grade II Listed Buildings and an assemblage of taller later structures which were still notable features in the local landscape. BOROUGH GREEN SAND PIT*Historic Landscape Assessment. Borough Green Sand Pit, Kent*

Thorne, A Portslade : Archaeology South-East, 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A visual field inspection and Historic Landscape Assessment was undertaken on land adjacent to the Borough Green Sand Pits. The work involved visual field inspection, a review of the historic maps of the site and review of aerial photographs. Four main forms of Historic Landscape feature were identified; post medieval field boundaries, Ancient Woodland and a footpath and possible post-medieval quarrying pits. The study concluded that four of the hedgerows were covered by the Hedgerow Regulations 1997, and therefore were of high significance, with the areas of Ancient Woodland classed as of moderate significance. The remaining features were deemed to be of low significance. The proposed works were seen to have a major adverse effect on one hedgerow, a moderate adverse effect on an areas of ancient woodland, a slight adverse effect on the footpath, a hedgerow and an area of former clay pits, and a negligible effect on all other features. THE BENENDEN CULVERT, BENENDEN*An Archaeological Desk-based Assessment of the Strawberry Wood Culvert, Benenden, Kent*

James, P Portslade : Archaeology South-East, 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for the Kent High Weald Project to review existing data relating to a stone-built culvert at Strawberry Wood. The culvert comprised a series of sandstone slabs set upon drystone retaining walls, and was situated at the point where a metalled trackway crossed a stream. The review found no evidence to date the structure, and no certain evidence of its function or origin. However, a study of the historic landscape context suggested that the structure may have been

associated with the iron industry, which flourished in the area between the 16th and mid-18th centuries.

2nd Cryogenic Pipeline and 3 Nitrogen Plant Grain LNG Importation Facility, Isle of Grain, County of Kent. Archaeological Desk Based Assessment

Howell, I London : Museum of London Archaeology Service, 2007, 30pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological desk-based assessment was carried out at the site and revealed that there were no statutorily designated archaeological resources on the site. The site had a high potential for geoarchaeological remains. The site had uncertain potential for prehistoric remains. There was evidence for Iron Age settlements in the area, as well as Bronze Age trackways used to cross the marsh and hulked boats in relict creeks. The site had moderate potential for Roman remains and early medieval, but being prone to flooding and being marshy probably did not contain settlements. Two silver Saxon coins were found by metal-detectorists immediately north of the proposed plant which might have indicated the presence of a cemetery on the edge of the gravel island and this might have extended into the site. The proposed pipeline crosses the site of a coastal salt works and the site of an early 20th century naval munitions storage facility. [Au(adp)]

ROCHESTER RIVERSIDE

An Archaeological Desk Based Assessment of Rochester Riverside, Kent. PB Building Site and Doust Way Car Park Site Volume 1/2

Carter, N Twickenham : AOC Archaeology Group, 2007, 122pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological desk-based assessment was carried out at two sites. The study identified 300 individual entries within the Kent County Council Sites and Monuments Record for archaeological features, chance finds and Listed Buildings. Within the 500m study radius of both sites, including seven historic parks and gardens, five Scheduled Ancient Monuments and five Conservation Areas. In total there were 177 Listed Buildings in the two study areas. The PB building site did not lay within a Conservation Area and did not contain any Scheduled Monuments, however, the site did contain a single SMR entry for the now demolished PB building, and a Grade I Listed section of the Rochester City Wall dating to the Roman and medieval periods. This section of the city wall, though not Scheduled, was considered of national importance. The Doust Way site lay within the 'Star Hill to Sun Pier Conservation Area' as identified by Kent County Council. The site did not contain any Scheduled Ancient Monuments, Listed Buildings or SMR entries. However, recent archaeological work on the site revealed burial evidence of possible Roman date, which had yet to be added to the Sites and Monument Records. [Au(adp)]

Revised Archaeological Desk Based Assessment Watermill Wharf, Canal Road, Strood, Kent

Darton, L & Chadwick, P London : CgMs, 2007, 79pp, colour pls, figs, tabs, refs

Work undertaken by: CgMs

An archaeological desk-based assessment was carried out at the site and revealed that the site has moderate to good archaeological and palaeoenvironmental potential for the prehistoric and Roman periods and a moderate for the Anglo-Saxon, medieval, post-medieval periods. The archaeological potential for the later post-medieval and modern periods was considered to be moderate to low due to the late 19th and 20th century impacts from the construction of the railway viaduct, demolition of the mill and land forming. The known post-medieval deposits and features at the study site were not considered to be impacted upon because they were located outside the footprint of the proposed development. Archaeological deposits pre-dating the post-medieval were buried beneath up to 3.5m of made ground and were not likely to be impacted by the proposed development. [Au(adp)]

LAND AT FRITWELL***An Archaeological Desk-based Assessment for land at Fritwell, Oxfordshire***

Clarke, S J Leicester : University of Leicester Archaeological Services, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

The assessment determined that the site lay within the historic core of the medieval village of Fritwell, within close proximity to Aves Ditch and the Portwey, two ancient trackways of possible pre-Roman origin. A previous watching brief across the development area revealed a scatter of medieval pottery. Any further development of the area was likely to have a damaging effect upon any archaeological deposits present. [Au(adp)]

LAND AT WOLVERCOTE MEAD, WOLVERCOTE***Land at Wolvercote Mead, Wolvercote, Oxfordshire. Desktop Assessment***

Oxford Archaeology Oxford : Oxford Archaeology , 2007, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The site was thought to have some potential for the presence of scattered remains of Neolithic, Bronze Age and Iron Age date, although these were unlikely to represent substantial sites. Associated waterlogged finds may also have been present. The settlement pattern from the Roman to modern periods were fairly well understood, and there were not thought to be any occupation remains from these periods. Some evidence of land use may have been encountered, however. Five hedgerows on the site were classified as important, an the site was well screened from all designated sites except the Grade II Listed Dukes Cut Canal. In general, there was thought to be a low to moderate potential for the discovery of archaeological remains, with little to no impact on them as a result of the development. [Au(adp)]

COWORTH PARK HOUSE, SUNNINGHILL
Coworth Park House, Sunninghill, Berkshire. Archaeological Desk-based Assessment
 Featherby, R London : Museum of London Archaeology Service, 2007, 28pp, colour pls, figs, tabs,
 refs
Work undertaken by: Museum of London Archaeology Service
 The assessment determined that the site had an uncertain potential for the prehistoric and Roman
 periods, however, this may have been a reflection of the lack of investigation carried out in the past. A
 low to moderate potential was assigned to the medieval period, owing to the possible presence of the
 original manor house, which was adjacent to but within the area proposed for development. A high
 potential was projected for the post-medieval period through deep cut features such as field boundaries,
 18th century and later formal landscape garden features or drainage ditches. [Au(adp)]

LAND AT LION HOUSE***An Archaeological Desk-based Assessment of Land at Lion House, Slough, Berkshire***

Russell, C Portslade : Archaeology South-East, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for a plot of land at Lion House. A review of existing archaeological and historical sources suggested that the site had a low potential for containing deposits of prehistoric to medieval date, and a high potential for containing deposits relating to a terrace of late 19th century buildings along the southern edge of the site. Farming and various phases of construction in the 19th century onwards was likely to have truncated to an unknown extent any archaeological deposits across much of the site. [Au(abr)]

ROAKES AVENUE, CHERTSEY
Roakes Avenue, Chertsey, Surrey
 Preston, S Reading: Thames Valley Archaeological Services, 2007, 37pp, figs, tabs, refs
Work undertaken by: Thames Valley Archaeological Services
 The site was within a topographic zone typically much favoured for prehistoric activity. Little significant archaeology was recorded in the vicinity, but this did include a Bronze Age site almost adjacent to the proposal area. This suggested a high potential for prehistoric archaeology to be present. The site was well beyond the likely extent of medieval Chertsey and there were no known Roman or Saxon remains close by: potential for these periods was probably lower. The site had been disturbed by modern development, but perhaps not extensively, and was not developed in the past. Field evaluation (trial trenching) should establish the presence/absence of archaeological deposits on the site. [Au(abr)]

CHURCH FARM BARNS, CHURCH HILL, TATSFIELD

Church Farm Barns, Church Hill, Tatsfield. County of Surrey. Archaeological Desk-based Assessment

Dawson, H London : Museum of London Archaeology Service, 2007, 30pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The site had a moderate potential to contain prehistoric remains. This potential related to the presence of prehistoric artefacts and ancient trackways in the study area. The site's location, close to a Roman road, meant that there was a moderate potential for Roman remains. The site was close to the possible location of a deserted medieval village, conjectured south of the church. Potential was high for the post-medieval period, because of farm buildings known on the site from cartographic records from the mid-18th century onwards. [Au(abr)]

An Archaeological Desk-based Assessment of 73 Westhall Road, Warlingham, Surrey

Russell, C Portslade : Archaeology South-East, 2007, 39pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for a plot of residential land in Warlingham. A review of existing archaeological and historical sources suggested that the site had a low potential for containing archaeological deposits of prehistoric to post-medieval date. Farming, of which most was pre-20th century, and the construction of several houses thereafter, was likely to have truncated to an unknown extent any archaeological deposits across much of the site. At the client's request, no walk-over survey took place of the site. This was a crucial method of data collecting in any desk-based assessment, and so the conclusion drawn from the available sources must be considered incomplete. [Au(abr)]

LAND WEST OF HORSHAM

An Archaeological Desk-based Assessment of Land West of Horsham, West Sussex

James, R Portslade : Archaeology South-East, 2007, 60pp, colour pls, figs, tabs, refs
Work undertaken by: Archaeology South-East

A desk-based assessment was prepared for a plot of land to the west of Horsham. A review of existing archaeological and historical sources suggested that the site had a generally low potential for containing archaeological deposits of prehistoric to medieval date, although the alluvial and gravel deposits of the Arun valley were considered to have a moderate potential of containing significant geoarchaeological and palaeoenvironmental deposits. The site was considered to have a moderate to high potential of containing archaeological deposits of post-medieval date, particularly associated with a number of known historic sites of the period, historic hedgerows, including a possible deer park boundary; a possible fulling mill and a Second World War pillbox. Recent intensive farming activity was likely to have truncated archaeological deposits across much of the site to an unknown extent. [Au(abr)]

LOCKLEAZE PRIMARY SCHOOL, LOCKLEAZE*An Archaeological Desk-based Assessment of Lockleaze Primary School, Lockleaze, Bristol*

MacQuarrie, H Twickenham : AOC Archaeology Group, 2007, 60pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

A review of sources indicated that the site lies in an area not developed until the mid-20th century urbanisation. Based on the baseline description there was little evidence to suggest prehistoric to Romano-British finds or features surviving within the site boundary. The potential was thus low. It was suggested that there was a low potential for previously unrecorded finds or features from Saxon to medieval periods. There was a low potential for previously unrecorded finds or features from the post-medieval period. [Au(abr)]

NOS. 55-81 NEWFOUNDLAND STREET, ST. PAULS, BRISTOL*Nos. 55-81 Newfoundland Street, St. Paul's, Bristol. Archaeological Desk-based Assessment*

Bruce, J Bristol : Avon Archaeological Unit, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Avon Archaeological Unit

The assessment indicated that the site was located within the former medieval manor of Barton and the ancient out parish of St. James, Bristol. The late 1780s saw a rapid expansion of the area and by the time of Mathew's 1794 plan, the south-west part of the site had been developed. By 1828 the site was taken over by terraced properties and a burial ground. The potential for the preservation of significant buried archaeological remains was not tested. It was thought that the site may have contained remains similar in scope to those of the 1999 trenches, excavated on adjacent land. It was thought that further field evaluation would be necessary. Stevens, D Bristol : Bristol & Region Archaeological Services, 2007, 48pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The results of the assessment indicated that the land surrounding the proposal area was occupied by Brislington Farm, later Langton Court, from at least the 16th century. The first evidence for development within the study area itself was an estate plan of 1971, showing buildings and enclosed plots. The site changed little until the late 19th-early 20th century when much of the site was demolished and replaced with terraced housing. [Au(adp)]

Archaeological Desk-based Assessment of land at The Former Esso Petrol Filling Station, Nos. 165-205 Bath Road, Totterdown, Bristol

Bryant, J Bristol : Bristol & Region Archaeological Services, 2007, 22pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The assessment established that the site included part of the former turnpike road to Bath, diverted onto the present Bath Road in 1834. Some remains of the old turnpike house and associated structures were thought to remain. Housing was constructed along the Bath Road frontage mainly in the 1880s and 1890s, but was demolished in the 1970s for a grand road scheme that was never completed, although the road and junction were later enlarged. On the lower level was, for many years, a boatyard that repaired barges used in the Bristol Docks and on the Avon. [Au(adp)]

Bristol & Region Archaeological Services Bristol : Bristol & Region Archaeological Services, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The site was located on a street, itself of medieval origin, with Nos. 9-10 still retaining part of a late medieval wall and also housing other elements relocated during redevelopment work in 1981. There had clearly been a residence of some quality here in the 15th century, with part of a 16th or 17th century timber-framed front illustrated in 1746. From the late 18th century onwards the site was used for warehousing, for decades as a cheese and butter store, but latterly leather. The warehouse was demolished in 1981. [Au(adp)]

LAND AT AND ADJACENT TO QUEEN ANNE HOUSE, QUEEN SQUARE/KING STREET, BRISTOL

Archaeological Desk-based Assessment. Land at and adjacent to Queen Anne House, Queen Square/King Street, Bristol

Bryant, J Bristol : Bristol & Region Archaeological Services, 2007, 33pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The site was first developed from the 1660s to the 1720s. All the buildings in the square, and many in the street, were destroyed during the Bristol Riots in 1831. Replacement houses of different proportions and warehouses replaced the previous buildings. Commercial usage took over the street in the ensuing century, with properties at the west end cleared in the 1930s for a new dual carriageway, with additional loss during the Blitz. The site was redeveloped in the 1970s and 80s. [Au(adp)]

ST. MICHAEL'S HILL & TYNDALL AVENUE, CLIFTON

Archaeological Desk-based Assessment of Land off St. Michael's Hill & Tyndall Avenue, Clifton

Townsend, A Bristol : Bristol & Region Archaeological Services, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The study area bestrode land that comprised part of an English Civil War defence known as the Royal Fort. From the 17th century, the area developed into a high-status residential enclave incorporating a number of fine town houses. The area was subsequently redeveloped in the mid-18th century by Thomas Tyndall to form part of Tyndall's Park. A building known as the "Great House" was demolished and replaced by the present Grade I Listed Royal Fort House [c.1760]. A 19th century hospital was also known to have existed at the site. Development continued through the 19th and 20th centuries, with extensions to the hospital and a Physics Workshop. A number of post-medieval houses had been demolished as a result of 20th century development impacts. [Au(adp)]

WINE STREET AND UNION STREET, BRISTOL

Wine Street and Union Street, Bristol. Archaeological Desk-based Assessment

Morton, R & Kenyon, D Cirencester : Cotswold Archaeology, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

The assessment established that a 12th century medieval wall ran through the site, below the area occupied by Southey House and Aylward House. The city defences were realigned in the 13th century and a new wall was constructed alongside the southern bank of a former course of the River Frome, to the north of the site. A defensive bastion situated on this wall lay immediately to the north of the site. Following the construction of the 13th century wall the site lay wholly within the defended area of the city, and it was likely that the Wine Street medieval tenements were created around this time. The medieval tenement pattern was destroyed by bombing in the Second World War. Modern basement development was thought to have severely truncated the site. [Au(adp)]

 Bristol & Region Archaeological Services Bristol : Bristol & Region Archaeological Services, 2007, 52pp, colour pls, figs, tabs, refs
Work undertaken by: Bristol & Region Archaeological Services
 The study area appeared to have comprised agricultural land until the mid-19th century whereupon it was developed for the Bristol and Gloucestershire Diocesan Training College [opened 1853]. The College underwent dramatic expansion in the 20th century, particularly in the 1950s and 60s, to become one of the Church of England's foremost learning institutions. It was closed in the 1970s to become the Bristol Polytechnic, and latterly the University of the West of England. Although the burial environment will have suffered considerable disturbance during the 1850s and after, it was possible that features and deposits of archaeological and historical interest may have survived, including under the existing buildings.  Etheridge, D Bristol : Avon Archaeological Unit, 2007, 42pp, colour pls, figs, tabs, refs
Work undertaken by: Avon Archaeological Unit
 The study area was formerly within the 12th century manor of Bedminster and the ancient parish of St. John, Bedminster, and known at that time as "The Marsh". From the early 12th century the eastern bank of the western arm of the meander was thought to have been used as a wharf, with associated settlement and warehouse activity. Tenements and a church were added later. Both sides of Redcliff Street appeared to have been settled by the early 13th century. Development in the post-medieval period continued, with the site's use reflecting the industry taking place [e.g. glasshouses and sugar bakers]. The area was completely remodelled in the 1950s after World War II bomb damage. [Au(adp)]

Townsend, A Bristol : Bristol & Region Archaeological Services, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The evidence examined as part of the assessment indicated that the study area was situated in an area of historical importance and exceptionally good archaeological potential. From the medieval period onwards, the Redcliffe area developed into an important suburb of Bristol, with Redcliff Street comprising one of three main routes linking the southern outer limits of the suburb to Bristol Bridge. The area had undergone episodic redevelopment and was severely damaged during World War II. The site was entirely redeveloped from the 1950s to the 1980s. It was, however, possible that archaeological remains still existed below the depth of any previous development. [Au(adp)]

Linge, A Bristol : Bristol & Region Archaeological Services, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The assessment found that the study area was likely to have been occupied since the medieval period. There was the possibility of a 17th century Civil War defensive bank and ditch crossing the development area. In the late 17th or early 18th century, houses were built on the West Street and Bragg's Lane frontages and tenements were grouped around a courtyard on the interior of the site. The site was thought to have high archaeological potential. Damage to the archaeological resource will have been caused by cellars and the terracing of Swift's premises into the hill slope. Archaeological Desk-based Assessment of Ashton Park School, Bower Ashton, Bristol

MacQuarrie, H Twickenham : AOC Archaeology Group, 2007, 75pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The assessment indicated that the site was historically part of Ashton Court Estate, a medieval estate that had been subjected to post-medieval landscaping. The north-east corner of the site contained post-medieval structures which would have formed part of the village of Bower Ashton. There was thought to be low potential for the discovery of any pre-medieval features within the site boundary. A landscape survey and evaluation were recommended to mitigate any impacts on known and unknown archaeological remains. [Au(abr)]

Land at the corner of Bedminster Place and Stillhouse Lane, Bedminster, Bristol. Archaeological Desk-based Assessment

Willis, A Bristol : Avon Archaeological Unit, 2007, 21pp, colour pls, figs, tabs, refs

Work undertaken by: Avon Archaeological Unit

It was suggested that the study area had a low to moderate potential for the preservation of significant buried remains from the 1730s onwards. The site was known to have been built on during this period, and as a result the potential for archaeological features and deposits from before this was unknown. An evaluation was suggested to test this potential. [Au(adp)]

EASTERN SECTION OF THE SOAPHOUSE INDUSTRIAL ESTATE, ST. GEORGES, BRISTOL

Archaeological Desk-based Assessment of the Eastern Section of the Soaphouse Industrial Estate, St. Georges, Bristol

Bashford, D Bradford : Daniel Bashford, 2007, 20pp, figs, tabs, refs

Work undertaken by: Daniel Bashford

Prior to the construction of the warehouse on the site in 1800, the potential for archaeological deposits of earlier periods was unclear but probably slight. Roman finds and features in the area, however,

suggested an improved potential for this period. The west-face of the west wing of the original Workhouse formed the north-eastern boundary of the site. 19th and 20th century structures may have survived as footings below the mid-20th century buildings. The raising of the ground level in the 1960s may have preserved earlier archaeological deposits beneath, but the level of ground disturbance prior to this landscaping was unclear. [Au(adp)]

Work undertaken by: AOC Archaeology Group

The assessment identifies twenty-two individual entries within the Bristol Historic Environment database (HER) for archaeological features, chance finds, archaeological events or listed buildings within the 500m radius of the study area. The site itself contains three HER entries relating to Roman archaeological evidence and three HER entries relating to the relevant archaeological investigations conducted within the bounds of the development site. There are no Listed Buildings or Scheduled Ancient Monuments within the bounds of the development site, and the site does not lie within any Conservation Areas or Areas of Archaeological Priority. There are no Conservation Areas, Areas of Archaeological Priority, Registered Parks and Gardens, Scheduled Monuments or Listed Buildings within the 500m radius of the site. There is one Scheduled Monument (the medieval Mere Bank) approximately 800m to the northwest of the site. [OASIS(Au)]

LAND BETWEEN KNOWLE LANE AND TIVERTON ROAD, CULLOMPTON

Archaeological Assessment of Land between Knowle Lane and Tiverton Road, Cullompton

Collings, A Exeter : Exeter Archaeology, 2007, 9pp, refs

Work undertaken by: Exeter Archaeology

An assessment was undertaken in July 2007 prior to redevelopment. The site lay in an area where previous archaeological work had established evidence for prehistoric and Roman activity. There was known Bronze Age activity recorded on the northern side of the Roman forts on St. Andrew's Hill, at the St. Andrew's Medical Centre site. During the medieval period the course of the former medieval town leat crossed the northern part of the site. Although now infilled, the feature may well have survived below ground, with the potential for the survival of medieval structural elements. Based on the pattern of fields shown on early maps, it was likely that the majority of the site was agricultural land during the medieval period. A single hedge bank survived within the site, and this almost certainly respected the line of the original medieval strip field divisions, and may itself have dated from enclosure undertaken later in that period. The layout of fields within the site had changed significantly since the 19th century, and ditches associated with former medieval boundaries may also have survived. A field name may have indicated small-scale brick working in the area. There were no surface traces for this, although it was possible that below-ground evidence, such as wall foundations, industrial deposits or surfaces might have been present. On a large site such as this there may be the potential for hitherto unknown archaeological deposits to be present. The presence of in situ prehistoric and Roman activity nearby indicated a general potential for the area to contain archaeological remains of these periods. [Au(Abr)]

NOSS MAYO*Noss Mayo Rising Main. Rapid desk-based assessment*

Pearson, A F Cardiff : Andrew Pearson, 2007, Grey literature bound report, 17 pages

Work undertaken by: Andrew Pearson

A rapid desk-based assessment was undertaken for a rising main at Noss Mayo, near Plymouth, Devon. There has been no systematic study of the archaeology of this locality, but there is sufficient evidence to demonstrate human activity since later prehistoric times. The locality is well-represented in the Domesday Survey and the area is likely to have been farmed since the medieval period. Noss Mayo retains its traditional character as a small riverside settlement enveloped by a pastoral fieldscape. The study area for this project took in a buffer of 500m around the line of the rising main. Within this area there were few known sites, and none that coincided with the route of the main. The County Archaeologist did not recommend any further archaeological monitoring during construction of the rising main. [OASIS(Au)]

NORTH GATE LODGE*North Gate Lodge Castle Street Totnes Results of an Archaeological Desk-based Study*

Green, TBarnstaple : South West Archaeology , 2007, A4 comb bound

Work undertaken by: South West Archaeology

South West Archaeology were asked to undertake a desk-based archaeological and historical assessment of a property known as Northgate Lodge, Castle Street, and Totnes where development was proposed. The site would have been outside the Saxon burh and Northgate Lodge occupies a site which may lie within the outer bailey of the castle, and which may have been part of the later medieval or post-medieval development. Although there was possibly a post-medieval dwelling on the site, the first clear indication of the existence of the present building dates from the 1840s. It was probably built by James Gill, one-time Mayor of Totnes. [OASIS(Au)]

PARISHCHURCH OF ST. PETER, UGBOROUGH***Archaeological Assessment of Proposed Reordering Works at the Parish Church of St. Peter, Ugborough, Devon***

Passmore, A J Exeter : Exeter Archaeology, 2007, 11pp, tabs, refs

Work undertaken by: Exeter Archaeology

An archaeological assessment for proposed reordering of the Church of St. Peter at Ugborough, was prepared. The church contained fabric dating from the 14th century, although it may have had a much earlier history. The church contained a Norman font and this was to be relocated as part of the reordering. Most of the boundary to the churchyard formed a banked oval enclosure, features of this type are often characteristic of late prehistoric settlement. Inside the church, below ground intrusive works would be needed where pews were to be removed and excavations would be required for new stone flags. Limited excavation may be needed under the relocated position of the Norman font. Proposed works in the churchyard included excavation of a drain and construction of a new ramp. These may impact on deposits associated with the possible early enclosure in which the church was constructed, as well as burials pre-dating the existing 19th century layout of the churchyard. In order that damage to hitherto unknown archaeological features, burials, structures or other deposits could be minimised, it was proposed that a comprehensive archaeological watching brief was undertaken during all groundwork. KINGKERSWELL MANOR HOUSE, KINGKERSWELL***Kingkerswell Manor House, Kingkerswell, Devon. Archaeological Assessment***

Humphreys, C Kentisbury : South West Archaeology, 2007, 32pp, colour pls, figs, tabs, refs

Work undertaken by: South West Archaeology

The ruins lying to the north-west of the church at Kingkerswell were thought to be those of a manor house built by the Dinham family in the late 14th century. The early history of the site as a royal manor and its location at a cardinal point in the landscape might have suggested that, together with a chapel, a manorial residence may have existed here from an early date. It was clear from the documentary evidence that this was in existence here by 1329, when the manor was held by the family of de Moeles. The Dinhams acquired the manor around 1381, where extensions or embellishments may have occurred. By the mid-16th century the house was in a decline that continued into the 19th century, when all that was left was a ruin. [Au(abr)]

RICHMOND DOCK, APPLIEDORE

Archaeological Assessment of Richmond Dock, Appledore

Neophytou, M & Gent, T Exeter : Exeter Archaeology, 2007, 10pp, refs

Work undertaken by: Exeter Archaeology

The importance of Richmond Dock was reflected in its Grade II* Listed status. It was constructed between 1852 and 1856 as part of the expansion of shipbuilding in the area and was in use until the mid-20th century. In that time the layout within the dock was remodelled on a number of occasions. The site is now derelict, although the most important original structure, the dry dock, was largely intact and in generally good condition. This feature would be retained as part of the proposed redevelopment, and the redevelopment of the site was deemed as unlikely to have an impact on any earlier archaeological remains, such as preserved prehistoric organic deposits on the estuary floor. SEVERN TRENT ASSET RENEWAL, WOODMANCOTE, BISHOPS CLEEVE***Archaeological Desk-based Assessment for Severn Trent Asset Renewal, Woodmancote, Bishops Cleeve, Gloucestershire***

May, R Sheffield : ARCUS, 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The proposed pipeline route lay within an area in which a large amount of archaeological remains had been recorded. The known sites consisted of Iron Age settlement remains on Cleeve Common, a Romano-British settlement at Haymes, excavated in advance of construction of the existing booster station and a covered reservoir, a medieval settlement and cultivation remains. The site mainly lay on the higher ground, and appeared to have been cultivated in the prehistoric, Roman and medieval periods, but had since been used for pasture and orchards. Gambles Lane and a lane predating the B4632 may have originated in the medieval period or earlier. Possible medieval settlements were listed on the Historic Environment Record at Haymes and to the north, within the proposed pipeline route. The majority of sites to be impacted by the proposed pipeline and new booster station were of local archaeological significance, mainly consisting of medieval ridge and furrow and communication routes. Remains associated with medieval and Iron Age settlements could have been of regional significance. A watching brief was recommended for the entire route, with more detailed strip and record in the sensitive areas. [Au(adp)]

Thomas, A Cirencester : Archaeology & Planning Solutions, 2007, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology & Planning Solutions

No known archaeological sites were present within the study area, however, this may have been due to a lack of investigation. There was a record of an undated rectangular enclosure in a field directly east of the application area, whilst another was recorded to the west. A probable medieval enclosure was also recorded to the west. This suggested a potential for unknown archaeological remains to be buried at the site, and as a result a programme of geophysical survey followed by targeted trial trenching was recommended. Clapton Court, Clapton-in-Gordano, North Somerset. Archaeological Desk-based Assessment

Blackwell, R Cirencester : Cotswold Archaeology, 2007, 31pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

There was generally a limited potential for currently unrecorded archaeological remains within the site. Romano-British features were observed during the construction of the M5, directly to the south of the site, and consequently there was some potential for associated remains within the site Clapton Court, the Church of St. Michael and All Angels and the Entrance Archway are Listed Buildings of national importance. The Court and Church are of medieval origin but there is no recorded evidence of settlement around the manorial focus. [Au(abr)]

Archaeological Desk-based Assessment of The Tithe Barn, St. Mary's Grove, Nailsea, North Somerset

Bristol & Region Archaeological Services Bristol : Bristol & Region Archaeological Services, 2007, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The original building (Grade II* Listed) was considered to date to the fifteenth century. The building was used as a school in the first half of the nineteenth century. The barn was of a modest side when compared to the great monastic tithe barns known elsewhere. The potential existed for significant archaeological features and deposits dating to the prehistoric, Roman and post-medieval periods within the burial environment of the study area. [Au(abr)]

PUMPING HOUSE SITE, MIDDLE STREET, LOWER BRIXHAM

Archaeological Assessment of the Pumping House Site, Middle Street, Lower Brixham

Manning, P Exeter : Exeter Archaeology, 2007, 9pp, refs

Work undertaken by: Exeter Archaeology

An assessment was undertaken on a proposed development site. The extent of any disturbance to potential archaeological features or deposits at the lower end of the site was deemed to be limited to the depth of the foundations, and any service trenches. Within the higher south-western part of the site the ground would be disturbed to a depth of c. 2.5m, plus foundations, in order to create a level site. This area would appear to have the greatest potential for the survival of archaeological features. It was suggested further potential archaeological features or deposits may also be encountered outside the footprint of the site during the excavation of trenches for the provision of services. Excavations within Middle Street could expose remains of former buildings associated with the earlier street layout and any works to the east and west could expose remains of early buildings, or features associated with the former creek. [Au(abr)]

CARY ARMS, GLEN HOTEL & BEACH CAFÉ SITES, BEACH ROAD, BABBACOMBE, TORQUAY

Archaeological Assessment of a Proposal Redevelopment at Cary Arms, Glen hotel & Beach Café Sites, Beach Road, Babbacombe, Torquay, Devon

Best, J Exeter : Exeter Archaeology, 2007, 24pp, pls, figs, refs

Work undertaken by: Exeter Archaeology

An assessment of three sites of the proposed redevelopment at Beach Road were located within an area of 19th century development. The presence of fisheries along this part of the coast was first recorded in the Domesday Survey of 1086. Medieval occupation was concentrated along the base of the cliff, in the form of a cellar settlement. Most of the permanently occupied fishing village along the south coast developed during the late 15th and the first half of the 16th century. Development in the area of Cary Arms and the Glen Hotel was likely to have taken place in the early to mid 19th century when the village became established as a seaside resort. Structures were recorded within all of the sites since at least 1840. Should intact archaeological remains survive at any of these three proposed sites it was considered there they were likely to be highly localised in extent. [Au(abr)]

BROMESBERROW HEATH TO MAISEMORE PIPELINE

Bromesberrow Heath to Maisemore Pipeline, Gloucestershire. Archaeological Desk-based Assessment

Tyler, R Edgbaston : Birmingham Archaeology , 2007, 57pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment was undertaken. The assessment comprised a documentary search of all readily available published and unpublished sources. Subsequent to documentary searches, a walkover survey of the entire route was undertaken to assess the topography, current land use and survival of any above ground archaeological features or earthworks of possible archaeological interest. The route was shown to pass through a varied landscape of above and below ground archaeological remains. The identified remains dated predominantly to the medieval period, representing early agricultural exploitation of the landscape and included two moated sites, at Hartpury and Prestberries Farm. Such moated sites normally date to the 12th/13th centuries and were traditionally associated with rural agricultural settlement and initial colonisation of former wooded landscapes, which appeared to be the case here. Areas of high relative archaeological potential identified by the desk-based assessment appeared to be the historic core of Redmarley D'Abitot village, an area of extensive earthworks around Prestberries Farm, and the road alignment between Maisemore and Hartpury. Given the nature of the proposed pipe trench, it was deemed unlikely that significant, useful information would be forthcoming from the maintenance of an archaeological watching brief during construction. A specific exception applied in the case of the ancient road or trackway where the maintenance of a watching brief was considered to be worthwhile. [Au(abr)]

NEWMAN COLLEGE, GENNERS LANE, BARTLEY GREEN, BIRMINGHAM

Newman College, Genners Lane, Bartley Green, Birmingham. An Archaeological Desk-based Assessment 2007

Bishop, E Edgbaston : Birmingham Archaeology, 2007, 20pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

A desk-based assessment was carried out by Birmingham Archaeology at Newman College. A walkover survey of the area was also undertaken to assess any visible potential above and below ground archaeological remains. The assessment concluded that there was low potential for the existence of prehistoric or Roman remains within the study area. Due to the close proximity of the medieval and post-medieval village of Bartley Green, it was possible that archaeological remains dating to these periods may have existed within the study area. However, these remains were likely to be in the form of the remains of agricultural features such as field boundaries. As the study area was redeveloped when Newman College was built in the late 1960s, these remains were unlikely to have survived. It was unlikely that any structural remains relating to the medieval and early post-medieval periods were present as the main settlement during this period appeared to have been located to the north-west of the study area. It may have been possible that remains of the 19th century Athol House and associated farm buildings, which were considered of local interest, could still be present below ground within the study area. These possible remains were likely to be located in the western part of the study area, later used as a car park. However, the development proposals would appear to have no impact on any possible surviving remains of Athol House and associated buildings. [Au]

OLD BOWLING GREEN, PARSONS HILL, KINGS NORTON***Old Bowling Green, Parsons Hill, Kings Norton, Birmingham. A Desk Based Assessment 2005***

Halsted, J Edgbaston : Birmingham Archaeology , 2005, A4 spiral bound report

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment was undertaken by Birmingham Archaeology in September 2005 examining the area of a proposed development at the Old Bowling Green, Parsons Hill, Kings Norton, Birmingham (NGR 40567, 27895). All available documentary and published sources were examined as part of the assessment and a site visit was made in order to identify features of the topography which may influence the presence of in situ archaeological deposits. The assessment highlighted that the site was in close proximity to a Roman road and excavated Roman settlements in the locality, together with several medieval settlement foci. The cartographic sources and site visit suggested that the site had not been subject to any significant development in its recent history and that the potential for the survival of in situ archaeological deposits remained high. 31 COMMERCIAL STREET***31 Commercial Street, Birmingham. A Desk-based Assessment***

Hislop, M Edgbaston : Birmingham Archaeology , 2007, 25pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

A desk-based assessment was undertaken on the origins of No. 31 Commercial Street as part of a larger plot encompassing the current extent of Nos 25-31 and first developed c. 1862 as a sawmill and timber yard. There had been buildings on the site of No. 31 since 1888 at the latest, which seemed to have been respected by building carried out on the adjoining sites of Nos. 37-45 in 1897, and Nos. 25-9 in 1899. However, there was no convincing evidence that it became a territorial entity in its own right until c.1919. Rebuilding of the north-west end of No. 31 seemed to have taken place in the mid-20th century, and of the south-east end in the early 1960s, but it was probable that earlier structures survived within the complex. ASTON STUDENT VILLAGE, ASTON UNIVERSITY***Aston Student Village, Aston University, Birmingham. An Archaeological Desk-based Assessment***

Collins, P Edgbaston : Birmingham Archaeology , 2007, 58pp, pls, colour pls, figs

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment of part of Aston University campus was undertaken. The aim of the assessment was to identify the extent, potential survival and significance of any archaeological remains within the study area, prior to the redevelopment of much of the site. The study area was developed from the middle of the 18th century onwards as Birmingham expanded outwards from its medieval core. It grew as a mixed area of working class courtyard housing industry and commerce. The earliest development occurred to the east of the site prior to 1731, and the majority of the site was fully developed by c.1839. The same configuration of streets survived until demolition in the 1970s following a compulsory purchase order of the land. Because of this, the old street grid could be used to locate any archaeological remains. Despite extensive modern redevelopment of the site since the 1970s, there appeared to be potential for the survival of archaeological deposits relating to Birmingham's post medieval industrial development, particularly from the mid-19th century. These were likely only to survive outside the footprint of existing and past modern developments constructed since the 1970s. There remains the potential for any future development to impact on any such remains, where this extends beyond existing or former buildings constructed since the 1970s. [Au(abr)]

MINWORTH

Minworth, Birmingham. Desk-based Assessment and Impact Assessment

Ramsey, E Edgbaston : Birmingham Archaeology, 2007, 26pp, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment and impact assessment was carried out. The site was located within the flood plain of the River Tame, and was surrounded by small hamlets of medieval origin including Minworth Greaves, Water Orton, Curdworth and the deserted medieval village of Wiggins Hill. Evidence for the medieval landscape was in the form of occasional standing buildings, ridge and furrow earthworks, excavated field boundaries, and quantities of pottery recovered during fieldwalking. To the south of the site was Minworth Mill, also recorded as medieval in origin. Cartographic evidence suggested that the development site itself was fields, and it was likely that no archaeological deposits may have survived within the areas proposed for development within the Sewage Treatment Works. The proposed area for landscaping, however, was much closer to the medieval village of Curdworth, and cartographic evidence suggested that there had been no development or disturbance in this area, suggesting that any archaeological deposits there may have survived. MINWORTH SEWAGE TREATMENTS WORKS

Minworth, Birmingham. Desk-based Assessment and Impact Assessment

Ramesey, E J Edgbaston : Birmingham Archaeology, 2007, 11 pages A4 report text, 13 pages A4 illustrations, 3 pages A4 Appendix, WSI

Work undertaken by: Birmingham Archaeology

An archaeological desk based assessment and impact assessment was carried out in April 2007 on land within and adjoining Minworth Sewage Treatment Works, Birmingham in advance of the redevelopment of part of the sewage works and landscaping to the east. The site was situated within the flood plain of the River Tame, and was surrounded by small hamlets of medieval Origin including Minworth Greaves, Water Orton, Curdworth and the deserted medieval village of Wiggins Hill.

Evidence for the medieval landscape is in the form of occasional standing buildings, ridge and furrow earthworks, excavated field boundaries, and quantities of pottery recovered during fieldwalking. To the south of the site is Minworth Mill, also recorded as medieval in origin. Cartographic evidence suggests that the development site itself was fields and it is likely that no archaeological deposits survive within the areas proposed for development within the Sewage works. The area proposed for landscaping, however, is much closer to the medieval village of Curdworth, and cartographic evidence suggests that there has been no development or disturbance in this area, suggesting that any archaeological deposits here may survive. 32 MARKET STREET, STOURBRIDGE

32 Market Street, Stourbridge, West Midlands. An Archaeological Desk-Based Assessment

Cherrington, R Birmingham : Benchmark Archaeology , 2007, 36pp, colour pls, figs, refs

Work undertaken by: Benchmark Archaeology

An archaeological desk-based assessment was carried out as part of the demolition of existing buildings, and the erection of 16 flats with associated parking and access on the site. A wide range of sources were consulted during the desk-based assessment. A site visit comprising a brief walk-over and photographic survey was carried out in June 2007. Based on this research, the application site was seen to contain no known archaeological sites. No HBSMR entries were identified within the application site. The nearest entry relates to the Grade I listed building of St. Thomas' Church which bordered the site to the north. A total of twenty HBSMR entries were identified within a 0.2km radius of the application site. With one exception, these entries all related to post-medieval and modern historic buildings. Based on the available cartographic evidence, the application site appeared to have remained relatively undeveloped until the late 19th Century, although some minor probable agricultural structures to the north of the site were shown on mapping of 1837. Thin strips of land shown on the 1837 map suggested that small scale farming was being carried out at this time which implied that the site was being regularly ploughed. The presence of further levelling deposits was confirmed by recent geo-technical work carried out by G.I.P Ltd. This would suggest that any unidentified archaeological remains (if present) may have survived in a good state of preservation. Alternatively, any such remains may have been truncated by episodes of ploughing carried out prior to the landscaping of the site. Based on the available evidence, the archaeological potential of the site was considered to be "low to

moderate". The proposed development included the construction of some 16 new units in the area of the site identified as having historically remained undeveloped. [Au(abr)]

2 Straits Green, Gornal, Dudley, West Midlands. An Archaeological Desk-based Assessment

Collins, P Edgbaston : Birmingham Archaeology, 2007, 24pp, colour pls, tabs, figs

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment was undertaken of land at 2 Straits Green, Gornal. The study area was located on the fringe of the Black Country, in an area that developed during the 18th and 19th centuries into a semi-rural, semi-industrial landscape. There was evidence of buildings on the land

from 1826, and the local area was known for its history of nail making. In 1826 a house, shop, garden, warehouse and stable were recorded as having been within in the study area. At the time of the assessment a pair of early to mid-19th century semi-detached houses occupied the study area together with a former privy. Dry stone walls defining a smaller plot than the study area, were also 19th century in date. None of these structures was of special architectural or historic interest, but the boundary walls made a significant contribution to the character of the historic landscape in this locality. No evidence was found for the survival of significant below-ground archaeology. [Au(abr)]

RIDGE HILL HOSPITAL, WORDSLEY

Ridge Hill Hospital, Wordsley, Dudley MBC, West Midlands. Desk-based Assessment

Kelleher, S Edgbaston : Birmingham Archaeology, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

A desk-based assessment was undertaken of Ridge Hill Hospital. The work was undertaken in order to highlight the archaeological implications of a proposed development at the site. A search was made of all readily available published and unpublished documentary records, including maps, illustrations and archaeological and geotechnical records. In addition, a walkover of the study area was undertaken in order to assess the topography and any above ground archaeology, including standing buildings. The assessment revealed a site with little development on it until the construction of the hospital buildings in the late 1970s. The only tangible evidence for development here prior to this was the existence of a brick kiln in the late 18th and early 19th-centuries, whilst earthworks on Cooknell Hill may be related to the Second World War period. The development of Ridge Hill Hospital at the study area in the late 1970s was the first major development in an area historically almost exclusively utilised as pastureland. This hospital development radically altered the landscape and topography of the study area, with plateaus being created for buildings, pools being drained, and a stream running through the site being culverted. Recommendations were made for future archaeological work. [Au(abr)]

WALSALL WATERFRONT***Walsall Waterfront Development, Walsall. Supplementary Desk-based Assessment***

Paul, S Edgbaston : Birmingham Archaeology, 2007, 32pp, figs, refs

Work undertaken by: Birmingham Archaeology

A desk-based assessment found there was no evidence for archaeological remains pre-dating the medieval period being present within the study area. During the medieval period the study area lay within the medieval park associated with Walsall manor. It was likely that the construction of the canal in 1799 along with its associated services and structures would have removed a great proportion of any earlier archaeological features and deposits. The clearance and re-building of the 1870's would have also removed much of the evidence for the earliest structures relating to the wharfs and docks. During the archaeological evaluations that have taken place surrounding the study area, the natural subsoil was encountered at varying depths below the present ground surface. However, there did appear to be a general trend of an increasing amount of overburden above the natural from the east to the west of the study area. It is proposed that trial trenching equivalent to 60 linear meters be carried out in order to complete the archaeological evaluation of the study area, in accordance with the recommendations of the original desk-based assessment in 1999. Cherrington, R Birmingham : Benchmark Archaeology, 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Benchmark Archaeology

An archaeological desk-based assessment was undertaken in advance of a proposed development. During the medieval period a moat existed in the Moat Street area and the putative southeast corner of the moat impinged upon the northwest corner of the proposed development site. Although the moat

was infilled in the late 19th Century, the remains of the moat may have survived below the present ground surface, including early deposits towards the bottom of the moat. Due to the archaeological potential of the site, a condition requiring a scheme of archaeological work comprising a programme of desk-based assessment and a watching brief was placed upon the planning permission. The desk-based assessment had established that it was very likely that the former Willenhall moated site extended across the north-west corner of the application site. If the remains of the moat survived below the ground surface there was a probability that the proposed development would impact upon them. The implementation of an archaeological watching brief during groundwork appeared to be adequate mitigation at this stage. [Au(abr)]

GC Bilston Bankfield Waterside, Bilston. Archaeological & Cultural Heritage Desk-based Assessment

JG London : Halcrow Group Ltd., 2007, 58pp, colour pls, figs, tabs, refs

Work undertaken by: Halcrow Group Ltd.

An archaeological desk-based assessment was carried out and revealed that Area A seemed to have been subject to open cast coal mining prior to the 19th century. Area B had seen little in the way of development, and clearance Area C had seen episodes of industrial waste dumping across the site. The establishment of the iron works on the site will have an impact to buried archaeology predating the 19th century. Area D seemed to have seen a small change in the buildings occupying the area, which appear to lie on a matrix of redeposited material containing substantial quantities of industrial waste. The presence of two subterranean air raid shelters indicates some limited truncation of buried deposits. [Au(adp)]

Work undertaken by: RPS Planning Transport and Environment

There was no direct evidence to suggest that the site contained any significant archaeological remains. Neither medieval or early medieval agricultural nor the limited landscaping and enclosures associated with the construction of the Cottage Hospital had left any significant archaeological remains. It seemed that any traces of limestone quarrying or burning were probably restricted to the area outside the site to

the north-west. The north-south oriented track shown on the 1928 map and visible in earthwork form on the ground was difficult to interpret but seemed more likely to have been the result of 20th century landscaping than of any earlier activity. [Au(adp)]

THE BEECHES, IRONBRIDGE

Archaeological Desk Based Assessment for the Beeches, Ironbridge

Lindsay, H Liverpool : Purcell Miller Tritton architects, designers and historic buildings consultants, 2007, 64pp, pls, colour pls, figs, refs, CD

Work undertaken by: Purcell Miller Tritton architects, designers and historic buildings consultants

An initial search into the Historic Environment Records revealed that Ironbridge was a World Heritage Site and that within an 800m radius of the site there were approximately 180 records, including two Scheduled Ancient Monuments and over 120 Listed Buildings. The site was owned by English

Partnership. The site could broadly be divided into two separate areas. The north and east part of the site was vacant of any notable structures, occupied largely by natural vegetation to the north and open pasture to the east, and containing the only two access roads onto the site. The southern half of the site was the former Beeches Hospital, which was mostly contained within the original Madeley Union Workhouse. There were a number of later additions and extensions, including a Nurses Home at the south edge of the site. It was understood that there was very little archaeological evidence present on the site prior to the industrial occupation of the mid 19th century, and while maps of this time indicate a brickworks to the southeast of the site and a railway track to the east, these were not actually within the boundaries of the site. Therefore, the main archaeological significance and potential of the site relates to the Madeley Union Workhouse itself, as removed from its current condition and function. [Au(adp)]

Land off Coppy Nook Lane, Burntwood, Staffordshire. Archaeological Desk-based Assessment

Tyler, R Edgbaston : Birmingham Archaeology, 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment, which comprised a documentary search of all readily available published and unpublished sources, in addition to a walkover survey of the study area, revealed that the study area had experienced little historical development, originating as heathland cleared from the Royal Cannock Forest. Throughout its history, the study area appeared to have constituted common heathland and subsequently undeveloped arable farmland and pasture. Extensive urban development to the west, associated with the rise of coal mining in the later 19th century, had not encroached upon the study area, which had retained its rural, agricultural aspect. Such development that had occurred within the boundary of the study area had comprised small-scale residential developments of the late 19th and 20th centuries. The potential for associated archaeological remains within the study area was low. The dispersed nature of the medieval Hammerwich settlement was of interest and there was a potential for the survival of medieval remains related to the former 14th century centre of Overton. Overall, the results of the desk-based assessment indicated that the archaeological potential within the study area was low and the implementation of an initial programme of trial trenching would have served as an appropriate mitigation strategy. BILSTON URBAN VILLAGE

Bilston Urban Village, The Black Country. Archaeological Desk-based Assessment Supplement

Ramsey, E Edgbaston : Birmingham Archaeology , 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological desk-based assessment and walkover survey of 40 acres of land to the south of Bilston and the Black Country Route was commissioned in 2003 by Wolverhampton City Council in advance of the proposed development of "Bilston Urban Village". The desk-based assessment was designed to update a previous report, and to propose specific mitigation strategies in advance of the development. The assessment was further revised in 2007 after the addition of new areas to the original site. The assessment highlighted the importance both historically and archaeologically of the area surrounding the historic core of Bilston, from the early industrial sites of the medieval period through to the massive expansion and development of the iron and coal industries during the post-medieval period. It suggested that while the area as a whole had been subjected to a lot of modern development and landscaping, there was still the potential for earlier archaeological deposits to survive in discrete areas across the site. The significance of any surviving industrial archaeology is not only important in relation to Bilston itself, but, as Bilston was a typical example of a Black Country town, the industry based here had an effect at a national level. ALMA STREET, COVENTRY

Alma Street, Coventry. An Archaeological Desk-based Assessment

Kelleher, S Edgbaston : Birmingham Archaeology, 2007, 20pp, figs, refs

Work undertaken by: Birmingham Archaeology

A desk-based assessment was undertaken of a site at Alma Street. A search of all relevant and readily available published and non-published documentary sources, including historic maps and photographs, was carried out. In addition, a walkover of the study area was undertaken in order to assess the topography and any above ground archaeology, including standing buildings. The assessment revealed information about a site with an interesting history. It appeared to have been used as undeveloped pasture land probably from at least the 17th century until the mid-19th century when the surrounding area was developed for residential and industrial purposes. In the mid-19th century the study area was occupied by terraced housing on each side; this was eroded away by industrial development towards the end of that century. It was also found that recent excavations at nearby Lower Ford Street yielded some interesting medieval archaeological deposits. Given the potential for medieval and post-medieval deposits, recommendations were made for future archaeological work. [Au(abr)]

Nos. 2 to 22 Northgate Street, Warwick, Warwickshire: An Archaeological Desk-based Assessment

Kelleher, S Edgbaston : Birmingham Archaeology , 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

A desk-based assessment was included a search of all readily available published and unpublished documentary records, including maps, illustrations, and archaeological and geotechnical records. In addition, a walkover of the study area was undertaken in order to assess the topography and the standing buildings. The assessment revealed a site with a rich and remarkable history in a town with evidence of settlement dating back to the Neolithic period. The study area was located along an important medieval street, dating back at least to 1086, which was on the main route between Warwick Castle and Kenilworth Castle, and was the main route between the Collegiate Church of St. Mary and St. Sepulchre's Priory to the north of the town. The great fire of 1692 saw the destruction of the medieval dwellings on the site, which were later replaced by high status, high quality "fireproof" townhouses. In the 19th and 20th centuries these townhouses were converted for the administration of the Warwickshire militia. [Au(abr)]

An Archaeological Assessment of the Development Known as Worcester County Cricket Club
 Lacey, C Goring on Thames : The Historical Environment Consultancy, 2007, 35pp, colour pls, figs, tabs, refs
Work undertaken by: The Historical Environment Consultancy
 It was considered that the likelihood of any remains being encountered would be restricted to areas of piling only, and would most likely comprise Second World War defences and the possible foundations of 19th century buildings. The presence of archaeologically significant deposits was dependent on whether excavations extended beneath the modern overburden into the floodplain surface, and whether the presumed minimal use of the land had on the past left any physical remains. Napthan, M Worcester : Mike Napthan Archaeology, 2007, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Mike Napthan Archaeology

It appeared that there was little evidence to support the contention that there was Roman occupation on the site. There was, however, potential for remains or deposits associated with a documented early medieval "Berwick" or outlying farmstead at Mucknell, confirming that the site had been continuously occupied since the Norman Conquest. Recent landscaping of the hill top was thought to have severely impacted upon any archaeological remains present. The 19th century farm buildings on the site had been extensively repaired and were to retain their character. [Au(adp)]

Johnson, M York : York Archaeological Trust, 2007, 18pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

A high density of archaeological remains around the site were present, in the form of crop marks. Within the development area, the only definite archaeological remains were shown by crop marks representative of ridge and furrow. It was thought that earlier features may have continued into the development area, however, it was uncertain how much of the archaeological record may have survived. A geophysical survey was suggested to give a clearer insight into the nature of the archaeology at the site. [Au(adp)]

Steedman, K Kingston-upon-Hull : Humber Field Archaeology , 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

The proposed quarry lay in an area of archaeological importance. 25 sites or findspots were identified within the study area, comprising single finds to extensive Iron Age/Roman field systems and settlement enclosures. An Anglo-Saxon burial was also noted. Two major cropmark complexes lay within the proposal area, parts of which had been subject to previous investigation. Iron Age roundhouses were seen to be replaced by Roman settlement enclosures, trackways and buildings. A wide early watercourse or palaeochannel was seen to run east to west across the site. Recommendations were made to minimise the impact of mineral extraction on the archaeological resource. [Au(adp)]

Archaeological Desk-based Assessment of Burton Grange Nursery School, Monk Bretton, Barnsley, South Yorkshire
 Stenton, M Sheffield : ARCUS, 2007, 26pp, colour pls, figs, tabs, refs
 Work undertaken by: ARCUS
 An archaeological desk-based assessment was carried out and revealed that the site lay near the gatehouse of the Monk Bretton Priory. There was no evidence relating directly to the site prior to 1855 when a field boundary was shown to cross the site. The site remained undeveloped throughout the 19th century when it was used as pasture. An open sided structure stood on the site in 1931, and was replaced by the nursery school in 1955. This was likely to have damaged earlier deposits associated with the 1931 building, which was unlikely to have possessed cellarage. No archaeological finds were reported in association with the development of the school. The standing structures were not considered to be of key archaeological significance, however, in the light of the site's proximity to the 12th century priory, previously unknown archaeological deposits could not be ruled out. PENISTONE GRAMMAR SCHOOL, HUDDERSFIELD ROAD, PENISTONE
Archaeological Desk-based Assessment, Penistone Grammar School, Huddersfield Road, Penistone, Barnsley

Stenton, M & Barnes, J Sheffield : ARCUS, 2007, 66pp, colour pls, figs, tabs, refs
 Work undertaken by: ARCUS

The desk-based assessment indicated that medieval activity occurred immediately south of the proposal area, with Nether Mill perhaps occupying the site of Penistone's manorial mill. The proposal area was part of a field system at the time of its enclosure in 1819 and was likely to have been in agricultural use during the post-medieval, and perhaps medieval, periods. The earliest recorded development within the site was the Penistone Union District Workhouse, which was constructed in 1859. This structure has been modified several times but remains extant as the Netherfield Annexe of Penistone Grammar School. Weirfield House had been constructed at the north of the site during the second half of the 19th century and it became the new site of the grammar school in 1892. The 19th century buildings have been modified substantially, with numerous structures added throughout the site during the 20th century. Previously unknown archaeological features or deposits could not be ruled out and, should they exist, the lack of development in the playing field area to the west of Huddersfield Road may mean that any features could be well preserved. Several of the buildings within the school complex are of architectural and historic interest. Two purpose-built, early 20th century school buildings also retain many of their historic details and fittings. The former workhouse buildings were designed by the renowned 19th century architects Lockwood & Mawson, and their original layout is almost complete. Recent modifications appear to have had a relatively minor impact on the building's historic fabric. These structures may be worthy of recording via a historic buildings survey. [Au(abr)]

COLTRAN ENGINEERING WORKS, CHURCH STREET, MEXBOROUGH*Archaeological Desk-based Assessment of Coltran Engineering Works, Church Street Mexborough, South Yorkshire*

May, R & Jessop, O Sheffield : ARCUS, 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The desk-based assessment indicated that there was the potential for the survival of sub-surface archaeological remains associated with the mid to late 19th century Don Corn Mill, and with the 18th to 19th century farm buildings formerly along the street frontage. There was also the potential for the survival of medieval deposits within the application area. The extent of survival of remains could not be assessed on the basis of the available evidence. Further archaeological assessment, such as trial trenching, was recommended to assess the extent, nature and condition of surviving remains. This would then inform as to the requirements for any further archaeological mitigation prior to development. Several of the standing buildings, including the brick-built former bakery the remains of the corn mill and the barrel-roofed workshops were of local historic interest and it was thought further recording may have been required prior to demolition. NORTON COMMON ROAD, NORTON*Archaeological Desk-based Assessment of a Proposed Fishpond Site at Norton Common Road, Norton, Doncaster, South Yorkshire*

May, R Sheffield : ARCUS, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

A desk-based assessment of a field at Norton Common Road was undertaken. Very little archaeological activity had been recorded within the immediate vicinity of the site, although significant prehistoric to medieval sites were known in the wider area, including Mesolithic to Bronze Age flint scatters, Iron Age/Romano-British field systems and dispersed settlement, and the medieval moated site and chantry chapel at Norton Priory. Aerial photographs showed fragmentary crop marks suggestive of Iron Age/Romano-British activity to the immediate north and east of the site, although it was unclear if these extended into the application area, and their interpretation was uncertain. The potential for medieval and later archaeological remains was considered to be low, as the site was likely to have been marshy common land until the Parliamentary Enclosure of 1814, when it was drained and improved for

arable cultivation. Field drains and drainage ditches were likely to be the only significant post-medieval features within the site. Further archaeological investigation would be required to assess whether prehistoric to Roman activity extended into the application area. [Au(abr)]

BANKWOOD LANE, NEW ROSSINGTON

Archaeological Desk-based Assessment, Bankwood Lane, New Rossington, South Yorkshire

Stenton, M Sheffield : ARCUS, 2007, 30pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

A desk-based assessment indicated that the proposal area was located within an area of extensive Iron Age and Romano-British settlement and that the site's greatest archaeological potential related to these periods. The proposal area was deemed unlikely to have been the focus of settlement between the 13th and 20th centuries, when it was part of the Rossington Hall estate. Cartographic evidence indicated that the site was in use as pasture between 1854 and 1933 but was part of a series of allotment gardens by 1948. Little ground disturbance is likely to have occurred during the allotment phase and the construction of a clothing factory during the 1970s appeared to have involved the use of shallow foundations, with little levelling of the terrain and no excavation of basement levels. This suggested that, while the upper levels of any sub-surface archaeological deposits may have been impacted, the lower levels of such features could be relatively undisturbed. [Au(abr)]

LAND AT COULMAN ROAD, THORNE

Archaeological Desk-based Assessment of Land at Coulman Road, Thorne, South Yorkshire

Stenton, M Sheffield : ARCUS, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The desk-based assessment indicated that the proposal area was part of Thorne's North Common until its enclosure in 1825. This suggested that the site was likely to have been commons during the early post-medieval period and thus may have retained this status from the medieval period. The site was likely to have been in agricultural use during these periods and therefore not the focus of settlement. The proposal area continued to be used as pasture and arable land during the mid-19th century and remained part of a field system until the mid-20th century. No development had occurred within the site by 1950, but small factory or industrial units had been constructed by 1956. These features did not appear to have contained basements. However, landscaping may have occurred in association with site preparation works prior to the construction of the units and this work was likely to have impacted upon any subsurface archaeological features that may have been present. The extension of the industrial buildings during the late 20th century and their subsequent demolition may also have affected any deposits. No archaeological finds or features were reported during either the construction or demolition phases and the site's archaeological potential can be considered to be low, although previously unknown deposits could not be ruled out. VAR CENTRE, COKE HILL, ROTHERHAM***Archaeological Desk-based Assessment of the Site of the Proposed VAR Centre, Coke Hill, Rotherham, South Yorkshire***

May, R Sheffield : ARCUS, 2007, 33pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The desk-based assessment undertaken indicated that Romano-British and medieval activities had occurred in the vicinity of the proposed development site, although no finds have been recorded within the site itself. The proximity of the road to Sheffield and Westgate Green, shown in the 18th century, suggested that unrecorded medieval and early post-medieval activity may have been undertaken at the western edge of the site, which appeared to have been used for agricultural and horticultural purposes in the 18th and 19th centuries. Housing development took place within the application area in the later 19th century, the main phase of development being between 1899 and 1901, with the construction of 14 terrace houses. The houses were cellared at the front, with a lesser cavity below the kitchen to counteract the sloping ground. The yards to the rear were also levelled. This construction is likely to have damaged any earlier deposits. The houses were demolished in 1985, and there has been no subsequent development on the site. The potential for the survival of buried remains relating to the housing, including foundations and cellars, was considered to be high. The potential for the survival of any earlier remains was considered to be low, although it could not be completely discounted. The housing is considered to be of low local significance, as an example of late Victorian workers housing,

of which many standing examples survive. Material culture associated with the houses, from rubbish pits or yard deposits, may provide evidence for the living conditions of the occupants. Any medieval or earlier archaeological deposits would be of high local to regional significance. The proposed development was considered likely to impact on buried archaeology [Au(abr)]

MANVERS WAY, ROTHERHAM

An Archaeological Desk-based Assessment of Land at Manvers Way, Rotherham, South Yorkshire

Stenton, M Sheffield : ARCUS, 2007, 31pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological desk-based assessment was undertaken on land at Manvers Way, Rotherham. The proposal area appeared to have been agricultural during the medieval and post-medieval periods. Prior to the Wath parliamentary enclosures of 1814, the site comprised commons and privately-enclosed fields remaining in use as pasture throughout the 19th century. A mineral railway most likely associated with Manvers Main Colliery ran through the proposal area between 1901 and 1989, while a large spoil heap was also present within the site between 1947 and 1976. Substantial ground disturbance associated with this period, including the construction of railway embankments and a land reclamation programme following the removal of the spoil heap, is likely to have impacted upon any previously unknown subsurface archaeological deposits that may have been present. This was likely to have been compounded by landscaping works associated with the area's post-industrial regeneration and the construction of Manvers Way. Although previously unknown archaeological deposits could not be ruled out, it suggested that there was a low potential only for the survival of such deposits. [Au(abr)]

LAND AT THE REAR OF 14-20 CHURCH STREET, OUGHTIBRIDGE

An Archaeological Desk-based Assessment of Land at the Rear of 14-20 Church Street, Oughtibridge, South Yorkshire

May, R Sheffield : ARCUS, 2007, 36pp, colour pls, figs, refs

Work undertaken by: ARCUS

An archaeological desk-based assessment was carried out at the site and revealed a corn mill recorded on the site in 1794 and in 1881 a paper mill and grinding wheel were mentioned on the site. A group of buildings were shown to have existed to the north of the original mill and mill cottages. A water wheel and corn drying kiln were still in existence in 1934 but the mill closed down prior to the Second World War and the buildings were demolished in the 1950s. The site was subsequently used as haulage contractors with three garages or depots built on the site for vehicles and storage. [Au(adp)]

SAVILE STREET, SHEFFIELD

An Archaeological Desk-based Assessment of Savile Street, Sheffield, South Yorkshire

MacQuarrie, H Edinburgh : AOC Archaeology Group , 2007, 78pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological desk-based assessment was carried out for the site and revealed that there were no Scheduled Ancient Monuments or Listed Buildings on the site. The assessment identified 41 sites and monuments within a 500m radius of the site. The cartographic and historical evidence indicated that the site remained undeveloped until 1851. There were three areas of archaeological potential. Area A included the area of Spital Hill, the road or any amendments to the side of the road. Area B comprised the small area which fronted onto Carlisle Road. Although this area was small and in poor condition it was one of the few areas in the north of site which may have preserved pre 19th century horizons. Area C was the area along Savile Street. Only the southern and western area was included as the eastern part would not be subject to ground reduction and the northern area would have been truncated during the construction of the Wicker Station. 23 GARDEN STREET AND 60-70 BROAD LANE

23 Garden Street and 60-70 Broad Lane, Sheffield, South Yorkshire, Archaeological Desk-based Assessment

Stenton, M Sheffield : ARCUS, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

In July 2007, a desk-based assessment was undertaken on land at Garden Street and Broad Lane. The assessment indicated that in 1637, the proposal area was located immediately north of Broad Lane, a route which may have developed as a driveway during the medieval period. There was no evidence relating directly to the proposal area prior to 1736, when it was undeveloped land. However, by 1779 the site contained a number of allotment gardens with associated small sheds. The proposal area had been developed by 1808, although individual structures were not shown until 1853 when the site was occupied by terraced and back-to-back housing. In addition to these domestic properties, retail and small industrial premises were also present within the site by 1876. The 19th century structures were demolished in 1935 during municipal clearance programmes and were replaced by the present-day buildings. It was not clear if the 19th century buildings contained cellarage, and the extent to which the construction of the 1935 works may have impacted upon any subsurface deposits relating to the earlier structures. If the workshop area of 23 Garden Street was levelled during the site's 20th-century redevelopment this would have destroyed any archaeological deposits that may have been present in this area. Further evaluation may be required in order to assess the extent of survival of subsurface archaeological features and deposits. [Au(abr)]

HANOVER WORKS, SCOTLAND STREET

Archaeological Desk-based Assessment, Hanover Works, Scotland Street, Sheffield

Stenton, M Sheffield : ARCUS, 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The desk-based assessment revealed that the site was a former area of medieval commons that remained open land in 1736 but had been developed fully by 1808. Individual structures were not shown prior to 1853 and the nature of the development, along with the period in which it occurred, was unclear. However, cutlery manufacturers occupied premises within the site in 1856 and it is possible that the company took over a number of previously independent properties. Many of the buildings shown in 1853 remained extant until the second quarter of the 20th century. Depending on the nature and extent of site clearance and landscaping works that took place in association with the site's mid-

20th century redevelopment and the construction of the Hanover Works, 19th century subsurface archaeological features and deposits may have remained in situ beneath the present-day works and the embankment at the south of the site. However, their extent and condition could not be determined by the available evidence. Further archaeological evaluation was recommended during any future work in order to assess the extent of survival of sub-surface archaeological features and deposits. [Au(Abr)]

BLACKBURN MEADOWS POWER STATION

An Archaeological Desk-based Assessment of a Proposed Development at Blackburn Meadows Power Station, South Yorkshire

Wilson, A & Kinsley, G Nottingham : Trent & Peak Archaeological Unit, 2007, 35pp, colour pls, figs, tabs, refs

Work undertaken by: Trent & Peak Archaeological Unit

No part of the site appeared to have remained clear of structures relating to the power station or the adjacent sewage works. Any surface features which may have existed were therefore likely to have been heavily truncated or destroyed. Only deep features such as palaeochannels were likely to be preserved. These could contain enhanced preservation of ancient organic material (including river-related structures), and botanical and faunal evidence of past environments. The scheme design was not sufficiently advanced to assess its impact, but aside from the reduced risk of finding palaeochannels in the area of ground investigations, there was no known focus of archaeological features or finds to be avoided. PARK HILL FLATS

Archaeological Desk-based Assessment, Park Hill Flats, Sheffield

Stenton, M & May, R Sheffield : ARCUS, 2007, 65pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

A desk-based assessment was undertaken of Park Hill Flats, Sheffield. During the medieval period, the site was part of the Great Park, a deer park created by the lords of Sheffield and unlikely to have been the focus of settlement. By 1637, the northern part of the site was being leased for quarrying, although this appeared to have ceased by 1736. At that date, the site remained largely undeveloped. Development had begun by 1795, with extensive urbanisation spreading throughout the site between

1808 and 1841. The site was dominated by domestic housing, although industrial and ecclesiastical premises, schools and retail and leisure outlets were also present within the site. Municipal demolition programmes had begun to clear the area during the 1930s but these were not completed until the 1950s, when the Park Hill redevelopment programme was undertaken. This involved the demolition and clearance of the majority of the area's 18th and 19th century structures, the removal of much of the road layout, the landscaping of the site and the construction of Park Hill Flats. Depending upon the nature and extent of site clearance and landscaping works that took place in association with the construction of the flats, 18th- and 19th-century subsurface archaeological features and deposits may remain in situ beneath areas such as car parks and landscaped lawns. Further archaeological evaluation was recommended in order to assess the extent of survival of sub-surface archaeological features and deposits throughout the site. [Au(abr)]

PARSON CROSS COLLEGES, PARSON CROSS, SHEFFIELD

Archaeological Desk-based Assessment of Parson Cross Colleges, Parson Cross, Sheffield, South Yorkshire

May, R Sheffield : ARCUS, 2007, 32pp, colour pls, figs, refs, CD

Work undertaken by: ARCUS

A desk-based assessment was carried out at the site and revealed that little archaeology was recorded within a 1km of the site, which was part of an open field in the medieval period and was gradually enclosed into smaller fields in the 17th and 18th centuries. The application area remained undeveloped until the mid 20th century. The college sites were developed as schools in the 1950s-60s and later became part of the Sheffield College network. The potential for medieval and later date archaeology was considered to be low. The potential for prehistoric and Roman archaeology could not be accurately assessed on the basis of current knowledge. LAND AT BROWNELL STREET, SHEFFIELD

Archaeological Desk-based Assessment of Land at Brownell Street, Sheffield, South Yorkshire

May, R Sheffield : ARCUS, 2007, 41pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological desk-based assessment was carried out at the site and revealed that the site was part of a field and was enclosed by 1637. It was developed in the late 18th to early 19th centuries mainly with terraced housing, some with shops on the ground floor. Historic street furniture including store setts and historic kerbs survived on Brownell Street and there were retaining walls to either side of the street, possibly dating to the 19th century. Cellars were anticipated to be encountered on the site. The potential for remains predating the late 18th century housing was considered to be low except in areas where the ground levels had been raised. Further archaeological investigation such as trial trenching would be required to assess the extent nature and condition of buried remains. [Au(adp)]

ASSELBY TO PANNAL NATURAL GAS PIPELINE***Asselby to Pannal Natural Gas Pipeline Archaeological. Field Reconnaissance Survey Report:******Appendum***

Network Archaeology LtdLincoln : Network Archaeology Ltd, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Network Archaeology Ltd

A desk-based assessment and field reconnaissance survey was carried out on the site. The additional survey was carried out due to access restrictions from the original survey in 2006. Thirty-two of the thirty-seven plots which remained unsurveyed were subjected to a field reconnaissance survey. This work identified a further sixteen sites of archaeological importance and potential. All identified sites had been graded according to their perceived archaeological importance. A potentially regional important site was identified, a stone scatter possibly related to the Scheduled remains of South Dyke, part of the Aberford Dykes monument complex. A regionally important site was also recorded where the pipeline crossed the course of the former Roman road between Tadcaster and Doncaster. The remaining fourteen sites were assessed as being of local importance, the majority being the product of post-medieval agricultural practice. [Au(adp)]

CASTLEFORD INTERCHANGE

Archaeological Desk-based Assessment. Castleford Interchange, West Yorkshire

Speed, G Barnard Castle : Northern Archaeological Associates, 2007, 34pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The proposed development comprised the construction of a new bus/rail interchange and associated infrastructure. The site lay less than 100m to the south of Lagentium Roman fort, with the Doncaster to Tadcaster Roman road bisecting the development area from north to south. Previous investigations had demonstrated that the road in the area of the development was flanked by extensive remains of the Roman civilian settlement, or vicus. Due to the nature of the development, there was not thought to be any impact on these deposits. However, there were several areas where information on the archaeological record was uncertain, and as a result a mitigation strategy was recommended. [Au(adp)]

Toop, N York : Field Archaeology Specialists Ltd., 2007, 68pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Field Archaeology Specialists Ltd.

The desk-based assessment highlighted the potential for palaeoenvironmental remains in the area, in addition to sites and finds of prehistoric to modern date. In particular, it seemed likely that Roman field systems, and possibly settlement, would have occupied a wide area, and a possible medieval mill had been noted to the immediate east of Marsh Drain. Implementation of an appropriate programme of evaluation was recommended for significant areas of proposed groundwork prior to the onset of further drainage works, to determine the extent and character of remains to be impacted, and to allow a suitable mitigation strategy to be designed. Work undertaken by: Archaeological Services WYAS

It was clear that there had been activity and occupation around the study area since at least the later prehistoric period, however, much of the landscape owed its origins to the dispersed pattern of late medieval and post-medieval settlement marked by the enclosure of land with dry stone walls. Evidence for post-medieval extraction of slate and limestone was also noted. [Au(adp)]

May, R Sheffield : ARCUS, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

A desk-based assessment found that the valley was likely to have been used in prehistoric times. No walk-over survey was possible, therefore the extent of survival of above-ground archaeology could not be established. The potential for buried prehistoric and medieval deposits cannot be accurately assessed on the basis of current evidence. The potential for significant post-medieval remains was considered to have been low. [Au(abr)]

Hunter, K Malton : MAP Archaeological Consultancy Ltd., 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: MAP Archaeological Consultancy Ltd.

An archaeological desk-based assessment was carried out. A dismantled World War II railway exists along the eastern boundary of the site. The Hawes to Northallerton disused railway embankment crosses the proposed development area. Prehistoric, Roman and Saxon artefacts have been located within a 1km radius but no archaeological finds have been recovered from the proposed development area. There are no Scheduled Ancient Monuments or Listed Buildings within the proposed development area. It is unlikely that there are any nationally important archaeological remains on the site that would prevent its allocation for housing purposes. [Au(adp)]

Ferguson, M & Hopkinson, G Egham : ArchaeoScape, 2007, 40pp, pls, figs, refs

Work undertaken by: ArchaeoScape

The assessment indicated that the site had the potential to contain archaeological remains of a number of different periods. Previous archaeological interventions in the vicinity have shown that survival of archaeological deposits across the site was likely to be highly variable and was somewhat dependant on the impact of 19th century quarrying and terracing. Basements of both existing and previous buildings on the site will also have taken some toll of the stratified deposits. The area had produced medieval deposits. [Au(adp)]

Fraser, R & Bishop, M Barnard Castle : Northern Archaeological Associates, 2007, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The appraisal determined that there were some 90 archaeological and historical sites within a 1km radius of the study area. The pipeline route commenced close to the former site of a prehistoric hillfort at Grafton Hills which had been lost to quarrying. It followed and crossed the lines of two Roman roads, one forming the principal Roman route north from York to Hadrian's Wall via Aldborough. Impacts of the pipeline would be limited to trenches excavated close to the B6265 road and the line of the former Roman road. The section of new pipeline between Whixley and Acomb Landing had more potential to impact upon archaeological remains, as a construction easement would need to be stripped across fields close to several medieval settlements and the pipeline would cross the line of the Roman road on several occasions. A site inspection followed by appropriate mitigation was recommended. [Au(adp)]

FORMER SITE OF MANOR FARM, HOVINGHAM

Desk Study Report on site at Former Site of Manor Farm, Hovingham

Foster, K Bristol : Structural Soils Limited, 2007, 68pp, colour pls, figs, tabs, refs

Work undertaken by: Structural Soils Limited

An archaeological desk-based assessment was carried out at the site, and included examination and provision of historical maps and an environmental database search covering geology, hydrology, historical, land use, water abstractions, groundwater source protection zones, landfill sites, radon, trade directory entries, petrol filling stations and nature reserves for the site and surrounding area. The report also considered the source-pathway-receptor linkages in the form of conceptual site models and risk assessments. The earliest map dated 1856 shows segregated fields possibly connected to the residential cottages located to the west of the site. In 1953 a building was shown in the northern section of the site and an additional six were erected by 1981 these buildings had been removed by 1995. In 1981 the site was identified as Manor Farm, there were a number of small farms within the area. The surrounding area had been gradually developed for predominately residential use. [Au(adp)]

GALE COMMON ASH DISPOSAL SITE, PHASE III, WOMERSLEY

Gale Common Ash Disposal Site, Phase III, Womersley, North Yorkshire. Desk-based Cultural Heritage Assessment

Lakin, M Barnard Castle : Northern Archaeological Associates, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The study identified a total of 20 recorded archaeological and historic sites within a 1km radius of the proposed development area. The site lay immediately adjacent to the regionally significant medieval moated site of Wood Hall. The site itself contained a number of cropmarks recorded from aerial photographs, and these were likely to relate to ditches and other features from the Iron Age or Roman periods, or to medieval or pre-enclosure post-medieval agricultural features. There was also the

potential for the discovery of prehistoric material within the study area. The most significant impact of the proposed development on any archaeological remains within the proposed development site would arise from the removal of topsoil and excavation for associated drainage works within the area of improved grassland in advance of commencement of ash disposal. In addition, the deposition of material to a final height of c.56m would have a potential, but unquantifiable, compaction impact upon any archaeology present at the site. [Au(adp)]

ASSELBY TO PANNAL PROPOSED NATURAL GAS PIPELINE***Asseby to Pannal Proposed Natural Gas Pipeline. Local Sources Review***

Ralph, S Lincoln : Network Archaeology Ltd, 2007, 86pp, figs, tabs, refs

Work undertaken by: Network Archaeology Ltd

An archaeological desk-based assessment was carried out at the site. This review and subsequent analysis identified 68 new and 3 updated sites. There was low potential for Mesolithic remains in the development area. There was moderate potential for Neolithic material and low to moderate potential for Bronze Age material. There was moderate to high potential for Iron Age material and Roman, Anglo-Saxon and medieval material. Post-medieval material was represented by a number of wells, quarries, footpaths and other isolated finds. [Au(adp)]

CATHEDRAL GREEN, DERBY***Archaeological Evaluation and trial trenching at Cathedral Green, Derby***

Baker, S Sheffield : ARCUS, 2007, 35pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The 18th century bridge at the site turned out to be remarkably well preserved, with exterior walls, stone cutwaters and brick vaulted arches surviving with little modern disturbance. Retaining walls associated with the mill stream were also encountered. These appeared to represent a late 19th or early 20th century phase of building. The western wall of the doubling shop was also identified, with an adjacent internal brick floor surviving adjacent. [Au(adp)]

LAND AT THE FORMER BRISTOL STREET MOTORS, ALFRETON ROAD, DERBY*Archaeological Evaluation on Land at the Former Bristol Street Motors, Alfreton Road, Derby, Derbyshire*

Tate, J BLeicester : University of Leicester Archaeological Services, 2007, 31pp, colour pls, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

Six evaluation trenches were excavated, revealing undated boundary ditches, probable medieval furrows and evidence for Roman occupation in the form of a mid first century ditch (possibly pre-fort) post holes and features containing charcoal and daub from disused timber structures. An abundance of 2nd to 3rd centuries and possibly the 4th century were noted residually in the ploughsoil, indicating longevity of occupation in the area. [Au(adp)]

CODNOR CASTLE*Codnor Castle, Derbyshire. Archaeological Evaluation and Assessment of Results*

Birbeck, V Salisbury : Wessex Archaeology, 2008, 48pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation involved the excavation of six trenches, three in the lower court to examine the approaches to the gatehouse and three in the upper court to explore the rear of the extant gatehouse and to trace the curtain wall of the upper court. The trenches in the lower court encountered a large moat, approximately 6m wide and 3m deep, with substantial masonry abutments that would have supported a drawbridge. Pottery recovered from the fills of the moat indicated that this probably fell out of use and was backfilled in the 16th

or earl17th

century. The finds from the lower fills suggested that the moat was probably open from the early 13th century. The lower fills also produced a notable find, a gold noble of Henry V (1413-1422), struck at the London mint. Although much of the archaeology in the upper court had been heavily disturbed by post-medieval and modern coal extraction and garden features, excavations here revealed part of the back wall of the gatehouse, which appears to have been built in the early 13th

century, and parts of the northern and eastern curtain wall, including the footings of a tower or turret on the northern wall. Occupation deposits were found within the turret, although these appeared to relate to a fairly late phase in the use of the castle. The Time Team evaluation has demonstrated the extent, character and condition of the castle remains and has shown that despite the later industrial use of the area, substantial and important medieval remains survived below ground. Analysis of the finds suggested that the masonry castle was probably established in the early 13th century and continued in use until the 16th or early 17th century. [Au(adp)]

MIDDLETON BOTTOM WHEEL PIT***Middleton Bottom Wheel Pit, Middleton-by-Worksworth, Derbyshire. Archaeological Trial Trenching***

Baker, S Sheffield : ARCUS, 2008, 16pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

Trenches were hand excavated around the eastern and western ends of the wheel pit structure, as part of a programme of refurbishment. The build of the structure appeared to be 19th century in date, and the pit had been cut into the embankment deposits relating to construction of the Cromford and High Peak Railway. This was not thought to be contemporary with the build of the railway in the 1820s, but instead suggested a later insertion or replacement of an original pit. [Au(abr)]

RAW DYKES ROAD, LEICESTER***An Archaeological Evaluation of Land Adjacent to Raw Dykes Road/Aylestone Road, Leicester***

Harvey, J Leicester : University of Leicester Archaeological Services, 2007, A4 spiral bound report

Work undertaken by: University of Leicester Archaeological Services

An archaeological evaluation was undertaken at land adjacent to Raw Dykes Road/Aylestone Road, Leicester (SP 583 026) by the University of Leicester Archaeological Services between the 20th and 23rd February 2007 for Total Fitness Ltd. The evaluation area was located on projected line of the Raw Dykes, which is thought to be an aqueduct that had been constructed to provide fresh water for Roman Leicester. This work represented the second phase of evaluation that was required to establish the extent of any surviving archaeological deposits relating to the Raw Dykes. A single trench was excavated across the projected line of the Raw Dykes revealing archaeological deposits relating to this feature. The eastern bank was located, although its western side had been truncated. Traces of the western bank were also identified. Deposits within the channel itself were well preserved and evidence of fine grain sediments was recorded. Unfortunately no artefactual material was recovered from Raw Dykes that may have clarified its construction date. Beyond the western extent of the feature a metalled surface that overlaid a possible paleo-channel was also recorded. [OASIS(Au)]

KNAVE HILL, STONTON WYVILLE*Knave Hill, Stonton Wyville, Leicestershire. Archaeological Evaluation and Assessment of Results*

Hall, N & Hyde, C Salisbury : Wessex Archaeology, 2008, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation was undertaken by Channel 4's "Time Team" at the site of Knave Hill, to investigate the existence of a possible Anglo-Saxon settlement site. This area had been previously identified by a systematic fieldwalking survey which recovered the largest concentration of Anglo-Saxon pottery identified by field walking in Leicestershire to date. Geophysical survey and excavation identified a large D-shaped enclosure, which proved on excavation to date to the Late Iron Age to Romano-British period. Another possible enclosure was identified lying 120m to the east. In addition, excavation revealed two possible Anglo-Saxon post-built structures, suggesting that the Saxon settlement focus lay to the north-west of the D-shaped enclosure. This activity was not visible to the geophysical survey. Dating evidence recovered was relatively limited (pottery and coins), and the Saxon pottery in particular was not susceptible to close dating, dated broadly as early/middle Anglo-Saxon (5th/6th century AD). The date range of the Romano-British finds (pottery and coins) appeared to span the period from 1st century AD (with some possible pre-conquest pottery) to 4th century AD, although continuity of activity throughout the period cannot be demonstrated, and the four late Romano-British coins recovered, three of which were perforated for suspension, could in fact have been collected and re-used during the Anglo-Saxon period. Work undertaken by: Northamptonshire Archaeology

A total of six trenches were excavated, two of which confirmed archaeological features. Four intercutting gullies and a single north-south oriented ditch were recorded in Trench Four. Trench Three produced two intercutting gullies aligned east to west. They may have formed a rectangular enclosure with the gullies in Trench Four, where a few sherds of medieval pottery were also recovered. [Au(adp)]

Work undertaken by: University of Leicester Archaeological Services

Five trial trenches were examined, of which four had very silty fills, perhaps indicative of fish ponds or possibly an outer castle ditch. Another trench contained a spread of building rubble with the remains of granite wall foundations, probably relating to a substantial structure of medieval date, based on a sherd of Stamford ware pottery and a fragment of ridge tile. Two fragments of Roman roofing tile from this trench also indicated activity of this period in the vicinity. [Au(adp)]

Clarke, JNorthampton : Northamptonshire Archaeology, 2007, 21pp, Colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological evaluation was undertaken at land to the rear of 137-199 Asfordby Road, Melton Mowbray. Two trenches produced evidence of Iron Age occupation comprising of ditches, which appeared to be boundary ditches, although two parallel gullies suggested a trackway or driveway. Iron Age and Roman pottery and animal bone were recovered from the ditch and gully deposits. One other trench produced a 20th century brick surface of agricultural use, whilst the other trenches contained no archaeology under modern made ground. [Au(abr)]

NO. 3 CASTLE HILL, CASTLE DONINGTON*Archaeological Evaluation of a Proposed Extension to No. 3 Castle Hill, Castle Donington, Leicestershire*

Webb, P & Kinsley, G Nottingham : Trent & Peak Archaeological Unit, 2007, 15pp, colour pls, figs, refs

Work undertaken by: Trent & Peak Archaeological Unit

An evaluation was carried out in response to proposals to construct a new extension. The site was located within Scheduled Ancient Monument No. 17096, a medieval castle earthwork. The castle's outer earthworks had been levelled, in the vicinity of the site, since at least the early 20th century. Dating from associated pottery suggested that the uppermost 1m of the excavation was deposited no earlier than the late post-medieval period. The bottom layer, which extended beneath the excavation depth, contained demolition debris from a stone-walled and stone-roofed, mortared building, of uncertain date. [Au(adp)]

4 - 6 CHURCH STREET, OAKHAM***Archaeological Evaluation and Building Report***

Capon, L & Clarke, C Twickenham : AOC Archaeology, 2007, A4 text, plate images, figures

Work undertaken by: AOC Archaeology

An archaeological evaluation was undertaken by AOC Archaeology Group on the 11th and 12th April 2007 at the site of 4 to 6 Church Street, Oakham. The aim of the evaluation was to assess the impact of the proposed residential redevelopment on any surviving archaeological remains. The evaluation comprised three machine excavated trenches. All three trenches were recognised as containing archaeological features. Trench 1 and 3 contained possible wells, one of which was dated to the early post-medieval period, the other well was undated. Trench 2 contained a variety of features, including a boundary ditch, small pit, and several postholes. All features in trench 2 were undated, except for a posthole which dated to the post-medieval period. The evaluation trenches demonstrated that a moderate density of archaeological features survive, in a good state of preservation, across the full area of the site. Overburden on site is limited due to a previous phase of horizontal truncation. [OASIS(Au)]

Work undertaken by: Archaeological Project Services

A previous desk-based assessment had identified the potential for late Saxon, medieval and later activity in the area, and it was possible that such deposits may have occurred in the development site. Geophysical anomalies had identified several ditch-like anomalies, however, only one of these turned out to be of an archaeological origin. This was thought to be a field boundary, and post-medieval material was recovered from the fill of the ditch. [Au(adp)]

SIBSEY LANE, BOSTON***Sibsey Lane, Boston. Archaeological Evaluation***

Trott, K Lincoln : Lindsey Archaeological Services, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Lindsey Archaeological Services

Evaluation has established the position of the medieval Bar Ditch on the site of the former printworks. A culvert and a well of probable 19th century date cut through a late 18th century garden soil horizon. This overlay a series of post-medieval deposits that sealed the Bar Ditch. The ditch had silted up and was eventually backfilled. Associated pottery was of 14th-15th century date. The ground beams and service trenches of the proposed development should not reach sufficiently deep to impact the deposits, however, it was thought that piling would have an impact on this resource. Land at The Thatch/Rosegarth, North Thoresby, Lincolnshire. Archaeological Evaluation

Glover, G Lincoln : Lindsey Archaeological Services, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Lindsey Archaeological Services

Five trenches were excavated across the site, with ditches and pits of some significance recorded. The finds assemblage was small with mostly undated material, but broadly suggested Saxon and medieval activity along with sporadic use of the site during the Late Neolithic/Early Bronze Age. However, the low density of finds may have suggested that the site was located towards the margins of any occupation during these periods. A photographic record of the east facing elevation of Rosegarth was made, but rendering of the walls obscured the fabric of the building. Archaeological features were at a depth that would leave them vulnerable to impact from the proposed development. [Au(aφ)]

Allen, M Branston : Allen Archaeological Associates, 2007, 19pp, colour pls, figs, tabs, refs

Work undertaken by: Allen Archaeological Associates

A cobbled surface exposed within the excavated trenches was likely to be of a 13th century date or later, with a medieval jetton from the surface in Trench One indicating that the surface was still in use after 1530-40. A stone-lined well was thought to be contemporary with the cobbled surface. A stone structure with a tiled roof of 12th/13th century date was recorded. This was thought to have been demolished in the 16th century. Later activity in the form of pits was identified in both trenches, including a large possible sand extraction pit of early 18th to 19th century date. [Au(adp)]

Work undertaken by: Allen Archaeological Associates

A single trench measuring 15m long was excavated, and found a series of deposits dating from the Roman period to the Second World War. The majority of the deposits consisted of a series of soils that appeared from the associated pottery evidence to have formed around the 2nd to the 9th and 11th centuries AD. A horizon immediately below the ground surface was probably associated with the modern destruction of post-medieval structures along Mill Lane. The latest feature identified at the site was probably a Second World War bomb shelter. [Au(adp)]

MILL LANE, LINCOLN***Archaeological Evaluation Report. Trial Trenching on Land at Garages and Workshop Site, Mill Lane, Lincoln***

Chavasse, P Branston : Allen Archaeological Associates, 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Allen Archaeological Associates

Five evaluation trenches were excavated, uncovering over 2m of deposits from the Roman to modern periods. The sequence showed that the site was probably wet, marginal ground in the Roman period, used for dumping refuse. There was a break in activity until the 9th/10th centuries when a cultivation layer was created, which continued to be worked throughout the medieval period. The remains of an 18th-19th century windmill were exposed below ground level, as well as some Victorian buildings with associated cellars that were constructed after the destruction of the mill. A bone flute of probable medieval date was recovered from a layer beneath a Victorian building. [Au(adp)]

Proposed development at Cuthbert's Yard, Burton Road, Lincoln. Archaeological Evaluation (Trial Trenching)

Wragg, K Martin : Lincs Archaeo-tech, 2007, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Lincs Archaeo-tech

Trial Trench A revealed a large ditch cut, two possible pit features, and ten further deposits. The latest of the features was visible in section (though generally not in plan) at a depth of c. 400mm below the existing ground level. Artefacts recovered from both stratified and unstratified contexts generally suggested a post-17th century date for the majority of the activity in this area, but a few fragments of Roman pottery or tile were also retrieved, hinting at the possibility of earlier remains on the site. Trial Trench B revealed further multi-phase features and deposits, including a possible continuation of the large ditch, a sizeable pit cut, and nine additional deposits. In general, the latest features began to appear at a depth of approximately 550mm below the existing yard level. Dating evidence from this trench indicated a broadly similar date for the majority of the deposits to that seen in Trench A, with the bulk of the finds apparently from the 17th century or later, although pieces of 12th to 13th/15th century roofing tile were also recovered. LINCOLN ROAD, HOLDINGHAM, SLEAFORD

Archaeological Trial Trenching at Lincoln Road, Holdingham, Sleaford, Lincolnshire

Cope-Faulkner, P Sleaford : Archaeological Project Services, 2007, 6pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Project Services

Only the position of the north and west walls of a stone building were located. An extension to the west appeared to have been removed by the construction of a pond. It appeared that the slight earthwork platform that provided the basis of the interpretation of a building was probably formed from the demolition of the two walls at the northwest corner. Few finds were encountered. [Au(adp)]

Hall, R Sleaford : Archaeological Project Services, 2007, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Project Services

The site lay within an archaeologically sensitive area, and as a result an evaluation was carried out in advance of development. Extensive evidence of the medieval Bourne potteries was revealed during the investigations. Three trenches, located across the central part of the site, exposed clay extraction sites backfilled with medieval pottery. The deposits were extremely well-preserved, well sealed and stratified, and offered very good potential for the further study and analysis of Bourne's medieval pottery industry. [Au(adp)]

BLACKHILLS FARM AND THE HOLLYS, WICKENBY***Blackhills Farm and The Hollys, Wickenby, Lincolnshire. Archaeological Evaluation and Assessment of Results***

Hall, N Salisbury : Wessex Archaeology, 2008, 53pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation comprising the excavation of eight trenches was undertaken by Channel 4's "Time Team" at the site of Blackhills Farm and The Hollys. This confirmed the density of Iron Age and Romano-British activity on the site. Geophysical evidence suggested three main phases of use on three separate alignments. The earliest activity appeared to comprise a number of penannular ditch structures and a north-west/south-east alignment of linear boundaries, thought to be Late Iron Age or early Romano-British in date. Two further alignments of rectangular enclosures and possible trackways, thought to be Romano-British in date, although of uncertain chronological relationship to each other, were also seen. As the area of the site was extensive much was unexcavated, but interventions were placed into a number of ditches and pits and dating from the Romano-British period. Traces of medieval ridge and furrow ploughing were visible in several trenches, cutting across the Iron Age and Romano-British alignments and in many cases obscuring the earlier archaeology. Only a small area of the site was excavated, and the quantity of finds recovered was small. The chronological sequence, therefore, remained somewhat tentative. [Au(adp)]

WESTWOOD BIOGAS PLANT, HIGHAM PARK, RUSHDEN***Westwood Biogas Plant, Higham Park, Rushden, Northamptonshire. Archaeological Field Evaluation***

Ingham, D Bedford : Albion Archaeology, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

The evaluation revealed the remains of an extensive field system within the development area. Although undated, comparable systems of Roman date had been recorded in the vicinity. A post-medieval ditch was found to be the origin of a cropmark identified earlier. The development would have a negative effect on the remains. However, the presence of at least 0.55m of overburden across the site meant that any archaeology would be preserved in situ wherever excavation was shallower than this. [Au(adp)]

FERRERS COLLEGE, HIGHAM FERRERS***Late Iron Age and Roman Settlement at Ferrers College, Higham Ferrers, Northamptonshire***

Caryllyle, S & Flavell, N Northampton : Northamptonshire Archaeology, 2007, 34pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological evaluation of land to the south and east of Ferrers College was undertaken. The work, comprised of a geophysical survey and trial trench excavation, and demonstrated the presence of archaeological remains relating to late Iron Age and Roman settlement, which extended across the proposed development area on a north-east to south-west axis. The north-eastern periphery of the settlement had previously been investigated during the construction of the A6 Higham Ferrers/Rushden by-pass. The settlement comprised a complex series of inter-cutting enclosures, gullies and ditches, largely clustered in the northeast and south-west corners of the site, with the focus of settlement shifting throughout the period of occupation. Pottery and animal bone were recovered, together with a small quantity of other finds and environmental remains. The settlement was probably established in the 1st century BC, or perhaps slightly earlier, and was abandoned in the mid-2nd century AD. [Au(abr)]

LAND NORTH OF ROTHWELL***Geophysical Survey of Land to the North of Rothwell, Northamptonshire***

Holmes, M, & Walford, J, Northampton : Northamptonshire Archaeology, 2007, A4, blue spine, heat bound, clear cover

Work undertaken by: Northamptonshire Archaeology

Northamptonshire Archaeology, commissioned by CgMs Consulting on behalf of a client, conducted geophysical prospection as part of the archaeological evaluation of a 58ha proposed development site to the north of Rothwell, Northamptonshire. The project was conducted in two phases. The first, in October 2006, covered 43ha, and the second, in January 2007, an additional 18ha. All surveyable parts of the site were investigated by magnetometer scanning and a sample area of c 15ha was surveyed in detail. An extensive settlement complex, of presumed Iron Age or early Roman date, was found near the north-west corner of the site. This was overlain by post-medieval agricultural remains, including a barn a trackway and several field boundaries. Towards the north-eastern end of the site a field system of unknown date was found. Medieval or later ridge and furrow was detected in many areas and an area of former quarrying was noted but not investigated further. [OASIS(Au)]

DALLINGTON GRANGE, NORTHAMPTON*Dallington Grange, Northampton. Archaeological Evaluation Report*

Laws, G Oxford : Oxford Archaeology, 2007, 47pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

Sixteen evaluation trenches were excavated targeted on known or suspected features and settlements. At the western side of the site the cropmarks of Sites 9 and 13 were demonstrated as being geological in origin. The linear cropmarks investigated by Trench 36 (Site 6) were also likely to be of natural origin. Sites 2 and 3 were confirmed as being of middle Iron Age and Roman date as established by previous evaluation although further clarification of the character of these settlements was not possible within the scope of this evaluation. Likewise, assessment of the causewayed enclosure was beyond the scope of this investigation although a curving ditch excavated within Trench 37 appeared to respect the southern boundary of this monument. With the exception of Trench 35, significant plough truncation did not appear to have occurred within the excavated trenches. [Au(abr)]

LAND WEST OF EARLS BARTON QUARRY

Archaeological Trial Excavation on Land West of Earls Barton Quarry

Mason, P Northampton : Northamptonshire Archaeology, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

A trial excavation was undertaken on land to the west of Earls Barton Quarry. The site lay in the floodplain of the River Nene within a landscape known to contain important Bronze Age remains. As a result of the fieldwork a small number of archaeological features, including a single human cremation, were discovered. Although not firmly dated, the features were thought to be roughly contemporary with an upstanding Bronze Age barrow (SAM17135) which occupied a position in the centre of the application area. Further work on environmental samples may help date the cremation deposit and facilitate comment on the floodplain's palaeoenvironment. [Au(abr)]

SEWARDSLEY PRIORY, SHOWSLEY GROUNDS, TOWCESTER

Sewardsley Priory, Showsley Grounds, Towcester, Northamptonshire. Archaeological Evaluation and Assessment of Results

Thompson, S Salisbury : Wessex Archaeology, 2008, 47pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The aim of the evaluation was to attempt to reveal the layout of the monastic buildings, to confirm (or otherwise) the suggested mid 12th

century construction date, and to establish the date range of the surviving archaeological remains. The evaluation revealed that the priory had a similar layout to many religious houses in Britain, based upon a 9th

century hypothetical blue-print of the ideal monastery known as the St. Gall Plan. The layout comprised a central doister with a chapel or church to the north, and ranges of buildings surrounding the remaining three sides. A number of phases of construction were identified, the earliest dating to the 12th

century, with later buildings constructed at times of relative prosperity. Burials accompanied the earliest phase of construction, and further burials dating to the 13th

century were also excavated. A possible two-storey building was located to the south-west of the cloister, perhaps the remains of the Prioress's bdgings, although its precise nature and function was uncertain. [Au(abr)]

Hurford, M Leicester : University of Leicester Archaeological Services, 2007, 25pp, colour pls, figs, refs

Work undertaken by: University of Leicester Archaeological Services

In total, 19 trenches were excavated in order to assess the potential for the survival of archaeological remains. A large enclosure ditch of Roman date was encountered in the south-western corner of the development site. Further Roman archaeology comprising a curvilinear feature extended to the north east and a pit to the north-west. The fragmentary remains of sub-rectangular fields were also present to the north-east of the enclosure, and were probably of Iron Age or possibly Roman date. Medieval furrows were noted at the site. GEDLING ACCESS ROAD*An Archaeological Evaluation on the Gedling Access Road, Gedling, Nottinghamshire*

Burrow, A Northampton : Northamptonshire Archaeology, 2007, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological evaluation was undertaken on two areas of land along a proposed access road at Gedling. In one area, a large linear ditched earthwork or hollow-way was present. This was interpreted as a probable trackway, possibly related to the former Gedling colliery to the north, although it may have originated as an earlier landscape feature. No archaeological remains were present in the other area. [Au(abr)]

Hurford, M Leicester : University of Leicester Archaeological Services, 2007, 32pp, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

In total, 33 trial trenches were excavated in order to assess the potential for the survival of archaeological remains. A number of linear features suggestive of boundaries were found on a gravel terrace, along with pits of probable industrial use and a single sherd of Saxon pottery. Undated linears in another part of the site were interpreted as possible Roman drainage ditches, with the exception of a prehistoric pit containing a Late Neolithic flint assemblage. Two post-medieval or modern drainage ditches were found to the south of Mill Hill, as well as a hollow way that may have been used as a route from land to the south of Clifton to the east. [Au(adp)]

Hunt, L & Score, V Leicester : University of Leicester Archaeological Services, 2007, 43pp, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

An evaluation was carried out in advance of the construction of a new railway station on land south of Red Hill, the site of a Scheduled Ancient Monument and the remains of Roman and Iron Age activity. Previous evaluation had revealed a Roman site with possible prehistoric activity. This evaluation continued on from previous work, and largely corroborated those results, with a paucity of features on higher ground but a concentration of activity at lower levels. Features were dated by artefacts to the 2nd-4th centuries AD, and reflected settlement activity. A small amount of Neolithic/Bronze Age material was found in the north-east corner of the higher area, the most part of which was considered to be fields. [Au(adp)]

Krawiec, K Edgbaston : Birmingham Archaeology, 2007, 55pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

The evaluation trenches revealed deep, urban style stratigraphy with a thick Roman layer. The archaeology was characterised by rubbish pits and gully-like drainage features. There were also four inhumations with grave goods in two of the trenches. A number of metal artefacts, mainly Roman coinage, and a small amount of possible prehistoric or Saxon material was recovered, illustrating the

longevity of the site. Pottery was wide ranging in style and status but was very well preserved in general. Later episodes of medieval ridge and furrow cultivation as well as negative features were observed. [Au(adp)]

AWS WATER TREATMENT WORKS, WING

AWS Empingham to Hannington Pipeline. Archaeological Trial Trenching. Interim Report

Mudd, A Northampton : Northamptonshire Archaeology, 2007, 15pp, pls, colour pls, figs

Work undertaken by: Northamptonshire Archaeology

A first stage of trial trenching was undertaken in October 2007. A total of 55 of the 110 planned trenches were excavated. Seven trenches contained features of possible archaeological significance. These included ditches, pits and post holes. None were dated and all appeared to be isolated, although this could not be demonstrated from the limited areas examined. A number of the linear features discovered in the geophysical survey turned out to be furrows of little significance. The two northern fields evaluated proved to have been quarried previously and a number of the trenches here were curtailed. [Au(abr)]

LAND EAST OF SAXON DRIVE, BIGGLESWADE

Land East of Saxon Drive, Biggleswade, Bedfordshire. Archaeological Field Evaluation

Preece, T Bedford : Albion Archaeology, 2007, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

The site was located within an area of extensive Saxon, medieval and post-medieval settlement, which had been the focus of archaeological investigation since the 1990s. Traces of earlier occupation were also revealed in the vicinity. The trial excavation was undertaken between 22nd January and 9th February 2007, with a total of nine trenches being opened. Six of the nine trenches contained archaeological remains. These were divided into two archaeological areas (western and southern) with a third blank Eastern Area. The Western Area contained Trenches 3, 4 and 6, the Southern Area Trenches 8, 9 and 10 and the Eastern Area Trenches 2, 5 and 7. Trench 1 could not be opened as the excavation licence did not permit damage to trees and shrubs, which were present in this part of the site. In the Southern Area, twenty ditches were identified along with associated pitting. Quantities of Romano-British pottery were found in several of the ditches and pits. However, the contrasting alignment of some of the ditches is likely to reflect the presence of both Roman and medieval activity in this area. There was evidence of sequential activity as several of the ditches had been redug indicating long-term use. A series of ditches were identified in the Western Area, some of which appear to be associated with a hollow way, a sunken routeway, probably defining a back lane to the settlement. Other features included two large pit-type features thought to be ponds and a smaller pit. At least three phases of activity were defined; they are probably associated with the eastern margin of the later medieval / post-medieval settlement. The evaluation has revealed well-preserved remains of both Roman and medieval date. The presence of Roman features was significant as it confirmed the continuation into this area from the south of previously identified activity. Preservation of the archaeological remains was generally good across the site, indicated by the both the presence of features such as postholes, and the depth of surviving features. The Roman activity has the potential to address issues concerning the origin and evolution of the settlement. These are general issues identified both in national and regional research agendas. The continuation of medieval and later features into the area will allow examination of the eastern margin of the settlement. [Au(abr)]

STRATTON BUSINESS PARK-WESTERN AREA, BIGGLESWADE

Stratton Business Park-Western Area, Biggleswade, Bedfordshire. Archaeological Field Evaluation

Preece, T Bedford : Albion Archaeology, 2007, 65pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

Trial excavation was undertaken between 22nd August and 7th September 2007, with contingency work on 14th September. A total of 29 trenches were opened, 10 within the Central land parcel and 19 within the Western land parcel. The results from an additional four trenches were incorporated from an

earlier trial excavation. Of the 33 trenches, 27 contained archaeological remains. In the Central land parcel, all of the trenches except one contained features comprising ditches, postholes and evidence of medieval agriculture. Two Archaeological Areas (AA1 and AA2) were defined comprising ditches which correspond to a previously recorded site visible as cropmarks (HER 13956), likely to represent a possible enclosure system (AA1). To the east and south of AA1, peripheral activity was identified that probably relates to an associated field system (AA2). In the Western land parcel, a total of 29 ditches were identified along with associated pitting, some of which contained quantities of Iron Age pottery. Two concentrations of features were identified comprising a series of enclosures in the northeast (AA3) and an enclosure associated with settlement in the south-west (AA5). Several of the ditches correspond to the previously recorded cropmark site (HER 13956). The area between these contained sparse archaeological features, probably defining associated field systems (AA4). The evaluation has confirmed the presence of archaeological features consisting of the well-preserved remains of Iron Age activity. These Iron Age remains probably represent a series of enclosures and a settlement area with peripheral activity likely to be an associated field system. Preservation of the archaeological remains across the site was generally good as indicated by the survival of features such as postholes and the depth of the features. [Au(abr)]

 An archaeological evaluation, comprising a single trench, was undertaken on land at Moor End, upon the site of a possible moat recorded in the Bedfordshire Historic Environment Record. The evaluation located one side of the moat and determined it had been backfilled in the twentieth century, most likely to create better access to the property. [Au(abr)]

Foundations Archaeology Swindon: Foundations Archaeology, 2007, 22pp, colour pls, figs, tabs, refs

Work undertaken by: Foundations Archaeology

The features revealed during the evaluation comprised the remains of 19th/20th century brick terrace housing and associated features which previously stood on the site. Trench One contained a chalk-cut well. Trench Four contained a deep pit which appeared to be a rubbish pit. Trench Five contained the possible corner of a building with associated drain run, a rubbish pit and a post hole, likely to be garden features. Trench Six contained a probable garden wall which may have delineated a garden path and a deep linear cut, brick-lined on one edge, filled with rubbish. In addition, a small fragment of brick walling was present in Trench Six which was likely to be contemporary with the other features considering its alignment. [Au(abr)]

A120-COGGESHALL-WHITESHILL FARM STANE STREET WATER MAINS RENEWAL

Detailed Archaeological Monitoring and Excavation of the A120-Coggelshill-Whiteshill Farm Stane Street Water Mains Renewal

House, J Cambridge : Cambridgeshire Archaeology, 2008, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridgeshire Archaeology

The site ran alongside Roman Stane Street, although there were some hints of earlier activity, represented by residual Early Neolithic and Iron Age finds. Roman finds from the site spanned from the 1st to 4th centuries indicating the road's use in the period. The road itself appeared to have remained in use, with people also living and working next to it. There was also evidence for medieval activity, as well as domestic and agricultural post-medieval land use. [Au]

40 WEST END ROAD, HADDENHAM

West End Road, Haddenham: Archaeological Evaluation 2007

Bishop, L Edgbaston : Birmingham Archaeology, 2007, Bound internal report

Work undertaken by: Birmingham Archaeology

In October 2007 Birmingham Archaeology undertook an evaluation at 40 West End Road, Haddenham, Cambridgeshire on behalf of CgMs Consulting prior to a proposed residential development. A total of 8 trenches were excavated to provide a 5% sample of the development area. Two trenches along the Eastern side of the site identified two ditches of possible prehistoric date. Other features within these trenches included small gullies and a pit, also of possible prehistoric date. Features excavated in trenches located along the western and central parts of the development area proved to be of recent origin. Earlier excavations to the east and southeast of the site have recorded activity dating from the late Iron Age through to the medieval period. The archaeological features recorded at 40 West End Road would appear to predate these. [OASIS(Au)]

WILBURTON EVALUATIONS

Land at Wilburton, Cambridgeshire (Mereham New Community). Archaeological Evaluation Report (phase II) Trenches 15-22 and 24

Wheaton, K Oxford : Oxford Archaeology , 2007, A4, plastic spiral bound

Work undertaken by: Oxford Archaeology

July 2006 to September 2007. Oxford Archaeology carried out a series of field evaluations on land at Wilburton, Cambridgeshire. The evaluations revealed part of a middle Iron Age farmstead at the west of the development area. The site appears to have gone out of use before being re-used in the late Roman period. Elsewhere on site prehistoric and middle/late Anglo-Saxon activity was observed as well as post-medieval quarries. While ridge and furrow activity had been shown on an earlier geophysics survey there was no evidence for this was observed during the evaluations. [OASIS(Au)]

95 GLEBE ROAD

Undated Remains to the Rear of 95 Glebe Road, Cambridge, Cambridgeshire

Muldowney, R Bar Hill : Cambridge Archaeological Unit, 2007, Evaluation report, 13 pages, 4 figures, 2 appendices.

Work undertaken by: Cambridge Archaeological Unit

The evaluation provided evidence for the presence of archaeology on the site, however, these features were mostly undateable. These features included an undateable ditch and two tree boles of possible Iron Age date. A second ditch may have pre-dated the Iron Age features, but was again undateable. Other features included an undated pit, a possible posthole and beamslot arrangement and a geological/alluvial layer. [OASIS(Au)]

Archaeological Evaluation on Land for the Newmarket Lower Links Nitrate Scheme [WTW Site], Woodditton, Cambridgeshire

Bradley-Lovekin, T Sleaford : Archaeological Project Services, 2007, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Project Services

The evaluation revealed no evidence of archaeological remains on the site prior to the construction of the water treatment works, although a number of prehistoric worked flints of Mesolithic and Early Neolithic form were recovered from both residual and unstratified contexts. The size of the assemblage suggested either peripheral activity, perhaps related to more intensive activity beyond the site's boundaries, or low-key visiting of the site by more transient communities. An Archaeological Evaluation

Hogan, S, Barton, T, Hallybone, C, Weston, P, Woolhouse, T Hertford : Archaeological Solutions, 2007, 47pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation revealed twenty archaeological features consisting of eight ditches, five quarry pits, a small pit, one brick-built outhouse with its construction cut, one quarry pit/ditch, two uncategorised features and an area of modern disturbance. Dated features comprised a late Bronze Age/early Iron Age pit, two medieval ditches, post-medieval quarry pits, a post-medieval outhouse and two post-medieval ditches. The medieval ditches, dating to AD 1150-1500, constituted interesting evidence of medieval land division in the area. [Au(abr)]

WHITTLESEY STONALD FIELD

Archaeological Evaluation on land at Stonald Field, Whittlesey, Cambridgeshire

Murphy, K Sleaford : Archaeological Project Services, 2007, A4 Comb Bound

Work undertaken by: Archaeological Project Services

An archaeological evaluation was undertaken on land at Stonald Field, Whittlesey, Cambridgeshire. The archaeological evaluation revealed evidence for the survival of prehistoric remains, especially towards the western boundary of the site. Post-medieval features were located towards the southern half of site, taking the form of boundary and drainage ditches. Extensive evidence for modern disturbance on site was uncovered, with machine stripping and modern dumping being particularly severe towards the north. [OASIS(Au)]

HOMELANDS, HIGH ROAD, GUYHIRN,***Archaeological Evaluation Report. Trial trenching at Homelands, High Road, Guyhirn, Cambridgeshire***

Clay, C Lincoln : Allen Archaeological Associates, 2007,

Work undertaken by: Allen Archaeological Associates

Five evaluation trenches were excavated in advance of residential development, revealing limited evidence for archaeological activity. The remains consisted of a series of probable former drainage and boundary features of post-medieval to modern date, in addition to layers of peat and alluvium in the NW part of the site, which reflect the flooding of the area prior to drainage. Two-large silt filled drainage features were exposed, although it is not clear what phase of drainage these relate to.

Excessive flooding limited detailed investigation of some features, although it was still possible to demonstrate that the development area had little archaeological potential. [OASIS(Au)]

MANOR FARM***Manor Farm, Church Road, Brampton, Cambridgeshire. Archaeological Field Evaluation Report***

Osborn, V Bedford : Albion Archaeology, 2007, Ring bound Report cream cover

Work undertaken by: Albion Archaeology

Albion Archaeology was commissioned to carry out the archaeological evaluation of land proposed as the site of a residential development at Manor Farm, Brampton Cambridgeshire. The site is located in the historic core of the village, 100m to the south of the medieval parish church of St Mary Magdalene, and adjacent to a series of ponds and water channels probably dating to the medieval period. The results of the evaluation indicated the presence of past human activity of possible medieval or post-medieval date located towards the far north of the proposed development area. To the centre of the site, large, deep but undated features possibly representing further medieval ponds were found. Subsoil ('B' horizon) deposits were found only in the north of the site, indicating the potential for good preservation of archaeological remains in this area. Elsewhere, overburden comprised levelling and demolition deposits of modern rubbish and building rubble up to 0.70m thick. The greatest impact from any proposed construction works on archaeological remains was concluded to be most likely in the north of the development area, where remains associated with settlement activity was identified beneath intact protective subsoil deposits. HINCHINGBROOKE SPORTS GROUND, HUNTINGDONSHIRE REGIONAL COLLEGE*Prehistoric Activity at Hinchingsbrooke Sports Ground, Huntingdonshire Regional College (Land Adjacent to Hinchingsbrooke Constabulary)*

Wheeler, D Bar Hill : Cambridge Archaeological Unit, 2008, Evaluation report, 20 pages, 4 figures, 3 appendices.

Work undertaken by: Cambridge Archaeological Unit

An evaluation was undertaken on land adjacent to Hinchingsbrooke Constabulary in advance of proposed development. Fourteen trenches, 50m long and one of 25m were excavated. Evaluation revealed a small assemblage of Neolithic flint work, Neolithic and Bronze Age pottery and a range of features dateable to the Iron Age. These pits, postholes and boundary ditches suggest this area is perhaps on the edge of a larger focus of settlement to the west. Later activity is indicated by finds from the Roman and Medieval periods, but these are likely evidence of occupation in the wider environment. Significant truncation was observed in the trenches to the western portion of the development area. [OASIS(Au)]

Work undertaken by: Oxford Archaeology

The evaluation encountered a small quantity of Roman pottery, recovered from the surface of the ploughsoil to the immediate west of Trenches Seven and Eight. This seemed most likely to have derived from field manuring. A small assemblage of late Saxon pottery recovered from the same area may have indicated contemporary activity within the vicinity, although evidence of this was absent from the trenches. Ditches were recorded that corresponded in position and orientation with field boundaries recorded on the 1st Edition 6" Ordnance Survey map of 1891, and were likely to have defined boundaries established during the period of Inclosure. LAND TO THE REAR OF 20 CHURCH STREET, STILTON***Archaeological evaluation of land to the rear of 20 Church Street, Stilton, Cambridgeshire***

Wolframm-Murray, Y Northampton : Northamptonshire Archaeology, 2007, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological evaluation was carried out on land to the rear of 20 Church Street. The earliest stratigraphic feature, which was otherwise undated, was a large, shallow hollow, at least 6m across. This feature may have been a pond, or possibly a watering hole for livestock. A farm track, shown on an aerial photograph dating to the mid-1980s, was identified in the north-west corner of the site. The track appeared to have been in use for a considerable period and may have dated back to the post-medieval period. The track was used to drive livestock from the farm to the former pasture fields to the north. Two ditches of a similar date were encountered to the east of the track. A layer of demolition rubble, possibly from former farm buildings and a boundary wall, was spread over a large area beneath the topsoil. [Au(abr)]

SCOTLAND FARM, SCOTLAND ROAD

Scotland Farm, Scotland Road, Dry Drayton, Cambridgeshire. Archaeological Field Evaluation

Ingham, D, Abrams, J, & Palmer, R Bedford : Albion Archaeology, 2007, A4 colour spiral-bound report

Work undertaken by: Albion Archaeology

A planning condition placed on the construction of a new grain store at Scotland Farm required the implementation of a programme of archaeological works. Albion Archaeology was commissioned to undertake an archaeological field evaluation. A reassessment of aerial photographic evidence that was undertaken as part of this project provisionally suggested that the crop-marks were non-archaeological in nature. Scotland Farm is believed to have been a settlement since the medieval period. The development area was evaluated in six trenches. They revealed the remains of late Iron Age activity, medieval ridge and furrow earthworks and two modern ditches. One of the Iron Age ditches appeared to correspond to the crop-mark crossing the development area. The archaeological remains in the east of the development area were sufficiently deep to be preserved in situ, whereas those in the west of the area were threatened by the proposed development. LAND ADJACENT TO 6 VICARAGE CLOSE

Land adjacent to 6 Vicarage Close. Archaeological Evaluation Report

Hudson, A Letchworth : Heritage Network, 2007, 5 page A4 comb bound booklet, green cover

Work undertaken by: Heritage Network

In order to meet the requirements of the planning consent for the development of a new dwelling on land adjacent to 6 Vicarage Close Melbourn, Cambridgeshire, the Heritage Network was commissioned by the developers to carry out an archaeological evaluation. A single trench was excavated within the footprint of the proposed building, the stratigraphy and the presence of ground water at the sedimentary layer was indicative of a possible shallow infilled garden pond possibly relating to when the site formed part of the gardens to the original vicarage. The modern nature of the backfill suggests that the pond went out of use during the latter half of the twentieth century. [OASIS(Au)]

CAMBRIDGE SCIENCE PARK***Trinity College/NAPP Phase I. An Archaeological Evaluation***

Hutton, J Cambridge : Cambridge Archaeological Unit, 2007, A4 wire bound with plastic laminated front, 18 pages and 6 colour plates.

Work undertaken by: Cambridge Archaeological Unit

An archaeological evaluation was undertaken by a team from Cambridge Archaeological Unit on behalf of Trinity (N) Ltd, on a c. 2.5ha site, centred TL 466 620, adjacent to the A14 and A10 on the Cambridge Science Park. The evaluation revealed a single pit of probable Late Bronze Age/Early Iron Age date, a small Romano-British ditch, a single posthole and pit of uncertain date, and the remnants of seven furrows. In addition, demolished construction material and fragments of armoured vehicle engine and body components relating to former wartime facilities were uncovered. The results of the evaluation provide limited evidence of later prehistoric and Romano-British activity with extensive disturbance from a fairly modern presence. [OASIS(Au)]

Hallybone, C & Pole, C Hertford : Archaeological Solutions, 2007, A4 ringbound document

Work undertaken by: Archaeological Solutions

The site had a high potential for archaeology of the Bronze Age, Iron Age and Romano-British periods with a possible masking of such periods by the remains of a ridge and furrow cultivation which was reminiscent of the medieval period. A sophisticated Bronze Age and Iron Age settlement site which included a possible metal working area reached as far as the plot adjacent to the current site. Gullies and linears ran through the site on an almost unanimous north to south alignment, except for a single east to west gully as found in Trench 7. The linears revealed are mainly shallow and it was originally suggested onsite that these were truncated by ploughing activity which predates the modern redeposited clay overburden layer L1000. However, another interpretation of the site is that the linears themselves are the remains of a plough damage such as medieval ridge and furrow cultivation. This would account for their regular spacing shallowness and uniform profile. This work represented a second phase of evaluation following that carried out by Northamptonshire Archaeology. These two phases of evaluation have demonstrated that the site fits into the wider landscape of this area to the south of Papworth Everard which is characterised by Iron Age occupation (preceded by Bronze Age activity that appears not to have been identified during this project), Romano-British activity and medieval and later agricultural activity. SUMMERSFIELD*Summersfield, Papworth Everard, Cambridgeshire. Archaeological Evaluation by Trial-Trenching.*

Allen, P T & Pocock, M Chelmsford : Essex County Council Field Archaeology Unit, 2007, A4 bound report, with photo of enclosure ditch section on front cover

Work undertaken by: Essex County Council Field Archaeology Unit

A trial-trenching evaluation was carried out following an earlier desk-based assessment and a geophysical survey. The most significant remains were recorded in the north-west of the site, on the spur of a low hill-top. Residual mesolithic flint implements were recovered there, and a probable Middle Iron Age settlement was recorded. Evidence of Late Iron Age and early Roman activity was slight, despite Ermine Street, a major Roman road, running along the eastern side of the site. A late Roman farmstead in a rectangular enclosure was recorded on the spur of the hill-top, with evidence of

at least one internal building and domestic occupation. Late Roman enclosures, probably for livestock, were recorded in the south-east of the site, near Roman Ermine Street. Environmental evidence suggests that the site was pastoral rather than arable. The late Roman enclosure in the north-west was re-used in the Late Saxon period, with an area of settlement to the north, next to St Peter's church. There is evidence of medieval ridge and furrow cultivation across the entire site area, with two medieval stock enclosures in the north-west, next to the Cow Brook, and a medieval windmill enclosure in the south-east, on Ermine Street. The medieval open field was not enclosed until 1818. Part of a 17th/18th-century farmyard was recorded to the rear of properties alongside Ermine Street, and the related farm was at the southernmost limit of the village at this date. [OASIS(Au)]

Work undertaken by: Barry J Hillman-Crouch

Fieldwalking found that two areas were identified as having had a sense spread of large flint and stone nodules, some definitely shaped as cobbles. Romano-British pottery including one piece of foliated Samian rim and thick Roman style tile was recovered. A complete honestone and the tip of another was also found. One struck flint core was also recovered from which many flakes had been removed. There was also much post-medieval peg tile and some earlier thicker nib-tile of the type found on medieval barns. 'SKYLINE 120 AREA A' GREAT NOTLEY BUSINESS PARK, NEAR BRAINTREE
An Archaeological Evaluation at 'Skyline 120 Area A' Great Notley Business Park, Near Braintree, Essex July-August 2007

Wightman, A Colchester : Colchester Archaeological Trust, 2007, 15pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological evaluation consisting of 831.1m of trenches was carried out between July and August 2007. Features were found to be spread very thinly over the site and were almost all linear cuts resembling ditches or gullies, with a few pit like features. Some parts of the site, in particular in the south-west, were found to be devoid of archaeology, with features recorded in 13 of the 24 trenches. Only five of the 27 features recorded produced any finds. Of those features without finds, most were natural in appearance and may have been the result of natural processes occurring during the last Ice Age, or of more recent activity such as the felling of trees or invasive agricultural practices. Post-medieval field drains and likely field boundaries observable on the 1881 OS map were excavated in the western and north-eastern parts of the site, while linears which did not produce any artefacts dominated the archaeology of the rest of the site. The absence of any Late Iron Age and early Roman finds indicated minimal activity in this area associated with the probable farmstead to the southwest of the site. This implied that most of the land was not inhabited or used for arable farming in that period, and it has been suggested that it was heath land. [Au(abr)]

Ennis, T Chelmsford : Essex County Council Field Archaeology Unit, 2007, 22pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

No features relating to the Saxon or medieval origins of Halstead were identified although the presence of a few sherds of 14th-16th century pottery attested to late medieval/early post-medieval activity in the area. A series of post-medieval pits dating to the 17th and 18th centuries were excavated. A brick drain may have been contemporary with this structure. The latest feature excavated was a beam slot indicating the probable position of a 19th or 20th century timber garden shed. With the exception of the 18th century brick wall, no archaeological remains of significance were recorded. [Au(abr)]

LAND NORTH OF WRIGHTS FARMHOUSE LOWER GREEN LANE, BLACKMORE END***Land North of Wrights Farmhouse, Lower Green Lane, Blackmore End an Archaeological Evaluation***

Ennis, T Chelmsford : Essex County Council Field Archaeology Unit, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

An archaeological evaluation was carried out on land to the north of Wrights Farmhouse. Four trenches were excavated across a possible medieval house platform. Although only limited excavation was undertaken, the nature of the earthwork was now better understood. One deposit of probable Roman date was excavated. The recovery of a quantity of unstratified Late Iron Age to Roman pottery indicated the likely presence of further archaeological remains of this date in the vicinity. It was clear from the pottery evidence that the house platform earthwork was likely to date to the late medieval period. A ditch demarcating the western side of the platform contained 13th-16th century pottery and further unstratified pottery of this date was recovered from upon the platform itself. No building remains were identified, but it was likely that these sherds of late medieval pottery accumulated during use of the platform. The lack of later pottery suggested that the platform had gone out of use by the end of the 16th century. The remains of 19th century outbuildings, associated with Wrights Farmhouse and depicted on the 1st edition Ordnance Survey map, were also identified in the south of the field. [Au(abr)]

Harris, P, Sparrow, P & Woolhouse, T Hertford : Archaeological Solutions, 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation revealed shallow linear features of post-medieval/modern date. Their alignment corresponded with the alignment of the current site boundaries. A calf burial of relatively recent date was also recorded. In Trench 1, a small post hole, a pit of post-medieval date and a brick cellar wall of post-medieval date were recorded. The cellar wall almost certainly related to the range of ancillary mill buildings on cartographic sources from the early to mid 19th century onward, possibly demolished by 1922. [Au(abr)]

48 CRESCENT ROAD, HEYBRIDGE, MALDON***48 Crescent Road, Heybridge, Maldon, Essex. An Archaeological Evaluation***

Hogan, S & House, J Hertford : Archaeological Solutions, 2007, A4 Ring Bound Document

Work undertaken by: Archaeological Solutions

In February 2007 Archaeological Solutions Ltd carried out an archaeological desk-based assessment and trial trench evaluation at 48 Crescent Road, Heybridge, Maldon, Essex (TL 8488 0844) prior to the redevelopment of the land for housing. The site is located towards the centre of substantial archaeological activity dating from the Neolithic through to the modern period, with particular phases of occupation and industry dating to the Iron Age, Roman and early Saxon eras. Cartographic sources indicated the site area has seen little urban development throughout the post-medieval periods, probably as a result of the main settlement at Heybridge shifting south-eastwards closer to the river course. After the probable Saxon occupation of the area, the site has remained essentially agricultural land until urban growth in the later 20th century. Excavations within the vicinity of Crescent Road, Holloway and Langford Road have revealed archaeological remains, indicating that this modern urban development has not removed all traces of ancient activity. The evaluation revealed evidence of Romano-British activity in the form of probable quarrying, represented by a group of three large intercutting pits. Other features may represent boundaries and the presence of a possible refuse pit may attest domestic activity nearby. [OASIS(Au)]

CHIGNALL HALL FARM, CHIGNALL ST. JAMES, CHELMSFORD

Chignall Hall Farm, Chignall St. James, Chelmsford, Essex

Schofield, T P & Peachey, A Hertford : Archaeological Solutions, 2007, A4 ringbound document

Work undertaken by: Archaeological Solutions

From August to October 2007, Archaeological Solutions Ltd conducted an archaeological evaluation on land at Chignall Hall Farm, Chignall St James, Chelmsford, Essex (NGR TL 668 104). Prehistoric activity is widespread in the area, with Mesolithic flint scatters and Neolithic sites including the Springfield Cursus 6km to the east. A Bronze Age settlement was excavated at Broads Green 2.5 km away. Significant Iron Age, followed by Roman, occupation has been identified to the south and east of Chignall Roman Villa, a Scheduled Ancient Monument. Medieval activity includes traces of narrow rig cultivation associated with a settlement close to the site of St. Mary's Church to the north. The

archaeological evaluation revealed dry valleys, tree hollows, medieval and post-medieval agricultural furrows and ditches. Prehistoric activity includes an early Neolithic cremation vessel containing human bone, and worked flint. The late Bronze Age/early Iron Age was represented by an occupation site on top of the rise in the south field. Features included a re-cut rubbish pit, postholes and ditches. There were also four ditches, two of which were particularly wide, in the south-eastern corner of the site. Iron Age activity is less represented, with only a posthole and a ditch close to the late Bronze Age/early Iron Age occupation site. Roman features in the south-west of the site include a large ditch present in three trenches and a small ditch. Two further ditches were present in the centre and south-eastern corner of the field. BELSTEADS FARM, BELSTEADS FARM LANE, LITTLE WALTHAM, CHELMSFORD

A Historic Building Survey and Archaeological Evaluation by Trial-trenching at Belsteads Farm, Belsteads Farm Lane, Little Waltham, Chelmsford, Essex

Alston, L, Spurgeon, E & Wightman, A Colchester : Colchester Archaeological Trust, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Belsteads Farm farmhouse is a Grade II Listed Building (EHER no 30649) and thought to be of c. 15th-century date with alterations and additions of the 17th century. The farmhouse is surrounded by a complex of farm buildings of historical interest, including a 16th century Grade II Listed timber framed barn (EHER no 39410), a probable 19th century brick barn, a cart lodge and an open fronted shelter shed; the combination of buildings is a good example of a post-medieval farm complex. The three 19th-century buildings were the subject of a written and photographic record at English Heritage (2006) Level 2. The site was subject to an archaeological evaluation. [Au]

MARCONI NEW STREET WORKS

Test Pitting at the former Marconi Wireless Factory (SELEX Communications plc) New Street, Chelmsford. An Archaeological Evaluation

Timberlake, S Cambridge : Cambridge Archaeological Unit, 2007, 25 page report, bound with wire comb, clear plastic and card covers, with colour frontpiece and 11 B and W and colour plates (incl. photographs)

Work undertaken by: Cambridge Archaeological Unit

An archaeological evaluation of the former Marconi Wireless Factory site, New Street, Chelmsford. Ten test pits were dug by the CAU in May 2007 within the car park and roadway areas outside the current factory buildings occupied by Selex Communications plc. This was undertaken prior to the prior to the possible sale of the site and demolition of the factory in order to determine the level of archaeological truncation and to assess the potential for archaeology within this previously unevaluated area of North Chelmsford. The limited sampling suggested that no more than 50% of the development area had potential for greater sub-surface survival of archaeology, with an area of probable truncation existing beneath the 1912 factory, but deeper sequences of possible early agricultural soils surviving at the south end of the site close to the railway embankment and at the far west of the site alongside Townfield Street East. A nineteenth century brick demolition horizon was identified across the southern part of the evaluated areas, although no clearly earlier archaeological features were identified.

A possible brickearth quarry with up to 2.5m of redeposited loam, clay and gravel was sampled at the west end of the site, the latter containing Victorian pottery and 18th century bottle glass. To the south east of this, part of the foundations or cellar of the T.D.Ridley Steam Corn Mill (late 19th - early 20th century) were located beneath the current car park area. [OASIS(Au)]

LAND AT THE JUNCTION OF CELEBORN STREET & THE WITWINDLE, SOUTH WOODHAM FERRERS, CHELMSFORD

Report on Negative Evaluation

Wightman, A Colchester : Colchester Archaeological Trust, 2007, 5pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

A nursing home was proposed to be built on land at the junction of Celeborn Street and The Withywindle. No archaeological material or features were observed, and no finds were recovered. The thin layer of topsoil and small amount of subsoil overlying natural geological material may have indicated that the area had been subjected to some degree of reduction or levelling, probably when the surrounding housing estate was originally constructed. This would account for the absence of archaeological material identified in the evaluation. [Au(abr)]

STAGE 1B, ALIENATED LAND AREA S2 (SOUTH), COLCHESTER GARRISON, COLCHESTER

Stage 1b archaeological evaluation, Alienated Land Area S2 (south), Colchester Garrison, Colchester, Essex January 2007

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 21pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Evaluation on a site to the south of the Roman Way Camp and west of the Berechurch Dyke revealed a number of prehistoric, Roman and post-medieval ditches. The ditches were on three different alignments, and appeared to have represented fragments of three distinct landscapes. The first field

system, dating to the Early or Middle Iron Age, was overlaid by a later, Late Iron Age or Roman, field system which was almost certainly to be associated with the early years of the oppidum of Camulodunum, one of the defensive lines of which (Berechurch Dyke) ran along the edge of Area S2 (south). Later, a third field system as evidenced by a series of post-medieval ditches. The ditches representing the Iron Age and Roman field systems were mainly to be seen on the western and eastern edges of the evaluation site. The central part of the evaluation site appeared to indicate that no archaeology was evident. The other excavated features, i.e. a small number of pits and post holes, were more apparent on the eastern side of the evaluation site, where the post holes may have represented structures such as buildings or fences, which were not fully visible in the evaluation trenches, and the pits may have represented domestic activity on or around those buildings or structures. STAGE 2 ALIENATED LAND AREA S2 (SOUTH), COLCHESTER GARRISON, COLCHESTER

Interim Assessment Report on Stage 2 Archaeological Excavations, Alienated Land area S2 (south), Colchester Garrison, Colchester, Essex February-March 2007

Brooks, H, Holloway, B & Masfield, R Colchester : Colchester Archaeological Trust, 2007, 43pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Following an evaluation earlier in 2007, four sites with a total area of approximately 0.5 ha were excavated on the sports pitches south of the Roman Way Camp (i.e. on Colchester Garrison Alienated Land Area S2 (south)), Sites A-D. This land was situated inside the oppidum of Camulodunum, with the Berechurch Dyke (one of Camulodunum's defences) extending along its eastern side. These excavations revealed a number of phases of occupation. Early prehistoric flints, Grooved Ware and a Beaker sherd may have indicated a passing presence here in the Mesolithic, Neolithic and Early Bronze Ages. The first permanent settlement was marked by a possible Late Bronze Age to Early Iron Age roundhouse. A single ditch approximately at right-angles to the Berechurch Dyke may have dated to the Iron Age although a later (Anglo-Saxon or medieval) date was also possible. There was no firm evidence of Late Iron Age activity here, and only a minor Roman presence could be demonstrated, presumably because in both periods this was farmland inside the oppidum. However, a small stock control system probably used for the close handling of sheep and tentatively dated to the Roman period showed some pastoral use of this landscape. Elements of a farmstead's enclosure (probably fronting onto the medieval precursor of Berechurch Hall Road) and further field boundaries were laid out in the medieval period. These may have been maintained and added to up to the mid 18th century. At that time, a small agricultural building, possibly a barn, was erected. Later, but still in the 18th century, the old field system was rendered redundant by the creation of a large enclosure. This was shown on the Chapman and André map of 1777, and appeared to contain a large building, which would have stood beyond the east edge of Site D. This enclosure was itself no longer used by the final quarter of the 19th century. [Au]

Miscellany, Medieval Britain and Ireland-Fieldwork Highlights in 2007. Rediscovering a Medieval Church in Colchester

Society for Medieval Archaeology London : Maney Publishing, 2008, 4pp, figs, refs

Work undertaken by: Colchester Archaeological Trust

New light was shed on the medieval ecclesiastical landscape of Colchester when traces were confirmed of the Crouched Friars church, revealed in a watching brief and excavation in advance of redevelopment. From this it was possible to identify also Colchester Building 181, excavated to the west of the current site at number 42 Crouch Street in 1988, as forming part of the west end and cloisters of the same church. This church was probably contemporary with the first documentary reference to the Crouched Friars in Colchester in AD 1251, although there was no direct archaeological evidence yet to support this contention. CAR PARK OF THE ADULT COMMUNITY COLLEGE, GREY FRIARS, HIGH STREET, COLCHESTER***An Archaeological Evaluation by Trial-trenching in the Car-park of the Adult Community College, Grey Friars, High street, Colchester, Essex January-February 2007***

Orr, K Colchester : Colchester Archaeological Trust, 2007, 29pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

The investigation was a partial evaluation to find remains of the friary of 'Grey Friars'. The investigation demonstrated the existence of medieval, post-medieval and possibly Roman archaeological features on the site, most of which were to be found at approximately 1m below ground level. The possible Roman feature was a robbed foundation. Romano-British material was found residually in later contexts. One piece of Anglo-Saxon pottery suggested occupation on the site between the 5th-7th centuries. In T1, a wide medieval foundation was likely to represent part of the friary church. Next to it was a large amount of building rubble. A copper alloy buckle typical of that worn on a monk's girdle came from this rubble. Three pieces of floor tile and four fragments of worked stone, all pointed to a monastic building. In T2 was another medieval wall foundation, at right-angles to that found in T1 and probably part of the same building, or perhaps a cloister attached to the church. The layer of demolition debris sealing these features contained medieval and post-medieval material indicating that these buildings continued in use well after the Dissolution of 1538. Further south, no foundations were exposed, but there were two probable medieval sand-quarry pits. Removal of L10 exposed a large pit (F21) and a spread of building rubble (F22). The large pit was deep down, at 1.3m below ground level, and cut natural sand (L11), making it likely to have been a sand-quarry pit, however, the greenish hue of its outer fills did resemble cess. A linear spread of building rubble and a large pit filled with building rubble most likely derived from demolished friary buildings such as the church, cloister, precinct wall or the gatehouse. Although no graves were exposed, one piece of skull was found. The fragment of human skull was found on the spoil heap (finds no 42) in the same vicinity as the rubble from F22. A search was made of this end of the trench in order to identify the grave from which the skull came. No grave was found, nor was any more human bone found on the spoil heap. It could only be assumed that this find came from a grave in the vicinity which had already been disturbed. Activity following the Dissolution of the monastery was evidenced by spreads of building rubble in T2 which appeared to have functioned as some kind of surface or walkway. Several other post-medieval pits and ditches were exposed. A WW2 air-raid shelter was exposed, dating to the time of the site's use as the County High School for Girls. [Au(abr)]

JARMIN ROAD, COLCHESTER*An Archaeological Evaluation at Jarmin Road, Colchester, Essex January 2007*

Pooley, L Colchester : Colchester Archaeological Trust, 2007, 14pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Seven evaluation trenches were located within the old Jarmin Road depot in advance of construction works on the site. In total, 20 features were recorded: seven modern, four Roman, four undated (but which may have been Roman), four natural, and one dated to the post-Roman period. The Roman features consisted of at least two ditches and a small number of pits, each containing domestic waste dating from the early Roman or possibly Late Iron Age period through to the early 2nd century. No evidence associated with the late 4th century kiln was identified, but one piece of cremated human bone found may have derived from a nearby disturbed Roman burial. [Au(abr)]

SHORT CUT ROAD, COLCHESTER*An Archaeological Evaluation at Short Cut Road, Colchester, Essex January 2007*

Brooks, H & Orr, K Colchester : Colchester Archaeological Trust, 2007, 15pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological trial-trenching evaluation of a site in Insula 2 of the Roman town found modern strata, drains and footings lying over a considerable depth of post-medieval soils. The highest significant archaeological horizons were generally Roman in date, and were found at depths ranging from 1.3m to 1.8m below present ground-level (i.e. the car-park surface). A significant quantity of Roman brick and tile and other building material found in residual contexts in the post-medieval soils shows that Roman buildings once stood here. They were presumably demolished by the medieval period at the latest, as is usually the case in Colchester. Historic maps indicated that this was an area of gardens in the post-medieval period. That fact, combined with the gradual infilling of buildings over the 18th to 20th centuries, would explain the depths of soil and the modern footings and drains found here. [Au]

ST. HELENA SCHOOL, SHEEPEN ROAD, COLCHESTER*An Archaeological Evaluation at St. Helena School, February 2007*

Pooley, L Colchester : Colchester Archaeological Trust, 2007, 20pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Six evaluation trenches (totalling 87m by 1.6m) were located within the St. Helena School site in advance of plans to extend the school car-park. A total of 18 features were recorded, consisting of 10 Roman (seven pits, one wall foundation, one ditch and one metalled surface), one mid/late Bronze Age pit, one post-medieval ditch, six undated features (four pits and two ditches) and one natural feature. Significantly, the Roman wall foundation appeared to have been part of the precinct wall for the late 1st century Roman temple known to have been located on the site. A large quantity of Roman finds were also recorded including two coins which belong to the post-conquest pre-Boudican occupation of Sheepen, a brooch fragment and briquetage which may also date to before AD 60/1, and a number of pottery sherds dating primarily from the 1st to the early 2nd century. THE PLAYGROUND, UPPER CASTLE PARK, COLCHESTER***Report on an Archaeological Investigation: CAT Report 416***

Orr, K Colchester : Colchester Archaeological Trust, 2007, 4pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An evaluation trench, measured approximately 1.5m x 1m, was excavated. The highest layer consisted of 100mm of wood chippings and 150mm of modern overburden. This sealed a modern geotextile membrane. The membrane was removed to expose a mixed mid-brown soil with patches of sand. This layer contained Roman brick and tile fragments but did not appear to be 'dark earth'. It was more likely to have been topsoil. It was decided to excavate the eastern side of the trench down to natural. The mid brown soil continued until natural sand was encountered at approximately 500mm below ground level. There did not appear to be an intervening layer between the topsoil and the natural. Two ditch or pit like features cut the natural at approximately 500mm below ground level. [Au(abr)]

TOPFIELD, RAWSTORN ROAD, COLCHESTER***An Archaeological Watching Brief and Partial Excavation at Topfield, Rawstorn Road, Colchester, Essex August 2006-May 2007***

Orr, K Colchester : Colchester Archaeological Trust, 2007, 18pp, pls, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological watching brief and partial excavation were undertaken during a small residential development at Topfield, which was part of a known Roman cemetery area in Colchester. Two Roman inhumation burials were exposed in the south-eastern part of the site. These could be added to the four inhumations found during the 2001 evaluation, and were most probably outliers to the known Roman cemetery at the adjacent St. Mary's hospital site. Downslope, in the north-western area of the site, waterlogged wooden posts probably dating to the Iron Age or Roman period were removed by machine during the digging of a sewer trench. [Au]

ABBEY FIELD CAR PARK, CIRCULAR ROAD NORTH, COLCHESTER***An Archaeological Excavation on the Abbey Field Car-park, Circular Road North, Colchester, Essex January-February 2007***

Brooks, H, Holloway, B & Masfield, R Colchester : Colchester Archaeological Trust, 2007, 48pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

This site lay within the oppidum of Camulodunum. An area of land measuring approximately 28m by 56m was excavated on the site of the new car park on the south-western side of the Colchester Garrison athletics track at the Abbey Field. The principal discovery was a double-ditched Roman track or driveway heading north-south. Between the track or driveway ditches were a number of patches of gravel, which may have been the remnants of a more extensive metalled surface. To the east of the east ditch of the track or driveway were five urned and two unurned Roman cremation burials. Four recent

and presumably Army-related pits were left unexcavated due to ordnance risk. A large area of recent disturbance along the southern edge of the site was also left unexcavated. A number of excavations or evaluations have taken place in the vicinity as part of the Garrison Alienated Land project, including an evaluation on this site in 2006. This report also included a brief report on a negative watching brief which was held on the digging of a cable trench along the north side of the Garrison athletics track. [Au]

RAWSTORN ROAD (ADJACENT TO TOPFIELD), COLCHESTER

An archaeological evaluation at Rawstorn Road (adjacent to Topfield), Colchester, Essex June 2007

Orr, K Colchester : Colchester Archaeological Trust, 2007, 24pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Two trial-trenches were excavated to evaluate an area currently used as garages next to Topfield, Rawstorn Road in June 2007. The investigation was carried out to evaluate the site of a known Roman inhumation cemetery, however, no burials were exposed by the evaluation trenches. Roman features were present in the form of small pits of uncertain function in Trench One and one large pit in Trench Two. Also in Trench One was an area of compact gravel that could possibly be interpreted as a metalled trackway or road of presumed Roman date. [Au]

STAGE 1B ARCHAEOLOGICAL EVALUATION, ALIENATED LAND AREA J2, COLCHESTER GARRISON, COLCHESTER

Stage 1b Archaeological Evaluation, Alienated Land area J2, Colchester Garrison, Colchester, Essex October 2006 and August-September 2007

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 27pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological evaluation by 19 trial-trenches revealed fragments of an undated, but probably Roman, agricultural landscape. Some undated natural features were encountered. The natural features consisted of small to medium sized irregular pits with highly leached fills, suggestive of tree-throw pits. However, the presence of small traces of charcoal in the fills indicated the possibility of tree-stump removal during an episode of agricultural clearance. Previous excavations and evaluations have identified a north-south droveway linking the main Roman road system to the fields of the oppidum of Camulodunum. This droveway should cross the extreme north-east corner of Area J2, but the presence of an access route meant that a trench could not be placed in the appropriate position for confirmation. The relevance of this droveway to Area J2 is that it appeared to act as a boundary between two different areas of land use, a Roman cemetery areas to its east and enclosed Roman farmland to its west. Sections of Roman ditches excavated in eight of the trenches were interpreted as field boundaries belonging to Roman farmland. The discovery of a few sherds of prehistoric pottery indicated limited activity here in the Late Bronze Age or Iron Age. Post-Roman features included a post-medieval north-south gravelled track (possibly associated with a similar track excavated on Area J (west) in 2004), two medieval or later field ditches, and a large number of modern, garrison related foundations and services. STAGE 1B, ALIENATED LAND AREA H, COLCHESTER GARRISON, COLCHESTER*Stage 1b Archaeological Evaluation, Alienated Land area H, Colchester Garrison, Colchester, Essex January-February 2007*

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 22pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological evaluation by seven trial-trenches revealed two Roman cremation burials and twelve Roman inhumation burials. A number of east-west and north-south aligned ditches may define the boundaries of discrete burial plots. The dating of the burials is closer to those excavated in 2004 on Garrison Area J1 North (immediately to the south) than to those excavated at Butt Road in the 1970s and 1980s (150m to the north of Area H). The burials were not excavated fully; it is anticipated that excavation will be completed during a later stage of archaeological work. [Au]

COLCHESTER GARRISON CHURCH, MILITARY ROAD, COLCHESTER*An Archaeological Evaluation at Colchester Garrison Church, Military Road, Colchester, Essex April 2007*

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

This plot was a known burial ground for the Napoleonic garrison at Colchester. An evaluation by four trenches revealed twelve linear features, which were interpreted as graves and intercutting graves. No human bone was exposed. Further excavation would be needed to confirm that these features were graves. There was scope for informative documentary research into burial records held by the Essex Record Office. This would shed light on the regiments whose soldiers were buried here, and would add to the knowledge of this interesting era in Colchester's history. [Au]

STAGE 1B, ALIENATED LAND AREA B1A, COLCHESTER GARRISON, COLCHESTER*Stage 1b Archaeological Evaluation, Alienated Land Area B1a, Colchester Garrison, Colchester, Essex January 2007*

Pooley, L, Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 29pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Two evaluation trenches were located within Area B1a of the Colchester Garrison Alienated Land redevelopment site. In total, 22 archaeological features were identified: five Roman, one medieval, three late medieval/early post-medieval, nine early post-medieval, two modern, and two undated. The Roman features provided evidence for Roman domestic/settlement activity in the vicinity of the circus, and the medieval features and finds (including a wall foundation) were probably associated with St. John's Abbey. The early post-medieval features consisted mainly of ditches and pits, but an interesting

structural feature may have represented a post-Dissolution building recorded on Speed's map of 1610. [Au(abr)]

STAGE 1B, ALIENATED LAND AREA B1B, COLCHESTER GARRISON, COLCHESTER

Stage 1b Archaeological Evaluation, Alienated Land Area B1b, Colchester Garrison, Colchester, Essex July-September 2007

Brooks, H, Holloway, B & Masefield, R Colchester : Colchester Archaeological Trust, 2007, 84pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

An archaeological evaluation by 25 trenches uncovered evidence for prehistoric, Roman, medieval and post-medieval activity. Area B1b represented the meeting point of three zones of Roman extramural activity comprising a settlement zone, a public entertainment building in the form of the Roman circus, and a cemetery. A small number of struck flints indicated a low level of activity in the prehistoric period. A large quantity of residual Roman pottery and tile (including tesserae, pila tiles and roofing tiles) was presumably derived from domestic activity and unidentified Roman buildings in this area. Roman pitting (T10, T12, T13) and a ditch (T17) were similarly representative of a settlement zone and added to the 2nd century domestic pit found during the 2002 evaluation of the site. Pottery and coin finds suggested a later 1st to 4th century date for this extramural occupation. The information could be added to the results of the Area B1a, evaluations undertaken in 2002 and 2007, which identified further Roman pitting, ditches and post holes and residual domestic finds including a quantity of painted wall plaster from a nearby building. Two Roman inhumation burials and one cremation burial, the latter within a large quarry pit (T31) were excavated at the south end of the site. These were probably part of the same general Roman cemetery previously excavated in GAL Area C2, 150m to the WSW, and at Napier Road, immediately to the south-west. Loose finds indicated at least three more burials. Roman quarrying was also evident in the south-east corner of the site. The predicted position of the east end of the Roman circus coincided with the southern edge of the site, and five trenches were specifically targeted on the circus structure. These confirmed the expected position of the cavea walls, and also exposed the south face of the partially robbed St. John's Abbey precinct wall. One robber trench contained peg tile, indicating a potentially late date for the end of the robbing activity here. A gravel surface was located on the outer side of the circus, matching that previously found on GAL Areas C1 and C2. Although Anglo-Saxon burials were recorded on the east side of Mersea Road, no Anglo-Saxon material was recovered during this evaluation. Despite the location of this site in the southern and western part of the walled precinct of St. John's Abbey, only one building could definitely be associated with the medieval abbey. This was a right-angled wall foundation with a rough cobble surface on its west side and a clay floor on its east side, possibly the south-west corner of a building with an internal clay floor (T18). Given the position of this structure, it must have been part of the monastic buildings. Other possibly medieval structural remains were located to the south in T9, on the western edge of the site, where buildings appear to have linked up with the western precinct wall of the abbey. Another abbey-period structure was a lime kiln/pit probably contemporary with the rebuilding of the abbey after the major fire of AD 1133. Finds probably from the abbey church included thick glass from a stained glass window. Other wall foundations containing peg tile (T22, T25) may have been late medieval (and so associated with the abbey), or post-medieval (and associated with post-Dissolution use of the site and particularly the Lucas mansion). MA COMS BUILDING, CAMBRIDGE ROAD, HARLOW***M/A COM Building Archaeological Monitoring Report***

Winter M Letchworth : Heritage Network, 2007, A4 booklet, green cover, com bound 9 pages

Work undertaken by: Heritage Network

In response to a condition on the planning permission for the construction of a steel framed building and storage yard at MA COMM Building, Cambridge Road, Harlow, Essex, the Heritage Network was commissioned by Cameron Facilities Ltd acting on behalf of Builbase Ltd to undertake the archaeological monitoring of the development groundworks. All ground reduction and drainage trenches were monitored. The site appears to have been heavily disturbed, probably during quarrying and subsequent levelling of the area for construction purposes. During the groundworks programme a series of buildup/levelling deposits were uncovered. These deposits were substantial in nature and as such no evidence of earlier activity was noted. [OASIS(Au)]

PASSMORES HOUSE***Passmores House, Third Avenue, Harlow, Essex. Archaeological Assessment by Trial Pits (Phase 1)***

Allen, P T Braintree : Essex County Council Field Archaeology Unit, 2007, Bound A4 copy with photograph of Passmores House on front cover

Work undertaken by: Essex County Council Field Archaeology Unit

Passmores House is an 18th century country house incorporating 16th century elements, with a 19th century stable block. It is built on the site of an earlier, medieval, moated manor house. The medieval manor house is documented from the 12th century, and part of the moat survives as an ornamental pond to the rear of the existing house. Monitoring of 8 trial pits excavated around the outside of the house proved that potential medieval deposits survived at a depth of between 0.45 and 0.75m. One trial pit located the organic fill of the eastern aerm of the medieval moated enclosure. Documentary research identified a summary report on atrench dug in 1999 in the south-west corner of the existing house, which revealed a complex sequence of structural remains beneath the house, dating to the 15th-16th centuries. An undated earlier wall is probably medieval. A garderobe infilled in the 15th century

contained large quantities of pottery and wooden and leather artefacts in its waterlogged lowest fill. Parchmarks in the grass behind the existing house probably indicate the foundations of the original medieval manor house. [OASIS(Au)]

HEYBRIDGE HALL, HEYBRIDGE, MALDON

Iron Age, Roman, Medieval and Post-medieval Remains at Heybridge Hall, Heybridge, Maldon, Essex: Evaluation September 2007

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 21pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

Heybridge Hall was a fine 13th century and later Listed Building, which burnt down in 2004. An archaeological evaluation consisting of ten trenches around the hall site in 2007 revealed evidence for occupation in the Late Iron Age and Roman periods, and possibly in the Middle Iron Age. An evaluation in 1991 had located an area of medieval activity to the east of the hall site, and beyond the eastern boundary of the 2007 evaluation. It was believed that this may have been the site of a timber building, either a predecessor of the now destroyed 13th century hall or an ancillary building. Trenching in 2007 also found a medieval ditch to the east of the site of the 13th century hall. The few sherds of medieval pottery from this ditch and other (residual) contexts supported a 12th or 13th century date for the foundation of the medieval hall complex. Most of the excavated remains were associated with the hall in its post-medieval phase. These included a gravelled yard and the foundations of an ancillary building to the south of the hall site. OLD MILL CLOSE, HIGH STREET, MALDON***Old Mill Close, High Street, Maldon, Essex. Archaeological trial-trenching***

Germany, M Chelmsford : Essex County Council Field Archaeology Unit, 2007, A4, 19 pages, 4 figures, 5 appendices

Work undertaken by: Essex County Council Field Archaeology Unit

Essex County Council Field Archaeology Unit carried out an archaeological trial-trenching evaluation during residential development at Old Mill Close, Maldon. The main discovery was four closely-spaced ditches dated to the late 12th/early 13th century. One of the ditches was cut by a late 12th/early 13th-century pit. The ditches most likely represent a medieval property boundary which was frequently renewed, or possibly ditches either side of an alleyway between neighbouring tenements. [OASIS(Au)]

MARTELL'S QUARRY, ARDLEIGH

An Archaeological Evaluation at Martell's Quarry, Ardleigh, Essex

Fallon, D Portslade : Archaeology South-East, 2007, 62pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken at Slough Farm. Sixty four trenches were excavated. A number of ditches were found that had a broad correlation to some of the crop-marks plotted from an aerial photograph. The earliest securely identifiable activity on the site was of Roman date. It consisted of a number of pits and ditches located to the north-west of the site. Two isolated finds were found in

the southwest of the site, a single sherd of pottery and a single fragment of brick. An artefact assemblage from the Roman period comprised a wide range of materials including slag, roof tile, human bone, animal bone, imported and locally produced pottery, including two semi-complete vessels, and iron nails. This was interpreted as an assemblage indicative of domestic habitation. The majority of features encountered during the fieldwork were undatable and were comprised of boundary ditches within an agricultural landscape. [Au(abr)]

THE LUFKINS FARM RESERVOIR SITE, GREAT BENTLEY

Neolithic and Roman remains on the Lufkins Farm reservoir site, Great Bentley, Essex October-November 2007

Brooks, H & Holloway, B Colchester : Colchester Archaeological Trust, 2007, 41pp, figs, tabs, refs

Work undertaken by: Colchester Archaeological Trust

The Tendring peninsula's archaeological potential was defined by extensive areas of cropmarks, very few of which have been excavated. In advance of an application to construct an agricultural reservoir, a group of important cropmarks (including a ring-ditch and a potential Neolithic enclosure) was excluded from the application site in order to protect them. An evaluation by 84 trial trenches revealed thinly spread activity ranging from the Neolithic to the Roman period, discounting modern field boundaries. The most important archaeological feature was a Neolithic pit containing at least four early Neolithic bowls, associated with flints, burnt flints and conglomerate stones. This pit group may be associated with the potential Neolithic enclosure, which lay 25m to the east. Other prehistoric features and finds, principally Neolithic, occurred sporadically across the evaluation site, but not at a density to suggest intensive or long lived activity. A Roman field system separated the area occupied by the earlier monuments from Roman fields and paddocks, in one of which was a possible Roman agricultural structure. [Au(abr)]

37-61 HIGH STREET***37-61 High Street, Great Dunmow, Essex***

Pocock, M Chelmsford : Essex County Council Field Archaeology Unit, 2007, A4 Blue spine

Work undertaken by: Essex County Council Field Archaeology Unit

An archaeological evaluation was undertaken by Essex County Council Field Archaeology Unit on land to the rear of 37-61 High Street, Great Dunmow, Essex, in advance of redevelopment. Although the site lies within the historic core of the town, in an area of high archaeological significance, the evaluation demonstrated that the survival of archaeological features and deposits across the development area was generally poor, but that archaeological remains survived in a localised pockets behind existing High Street properties. The earliest remains were medieval, dating to the 13th to 14th centuries and consisted of a probable well and small pit. Later remains included post-medieval and modern pits and small isolated post-holes. To the rear of The Boars Head public house (No.37), several post-holes and a possible beam slot contained post-medieval material within their fills but may have belonged to an earlier structure which had been dismantled. The importation of soil onto the site in the Early Modern/ Modern period, along with the construction of a raised concrete loading bay or building platform, has resulted in the raising of ground levels across the area of investigation by up to 1.3m which, coupled with the localised and poor levels of survival noted, suggests that the development is unlikely to have a significant impact upon the archaeological record. CRUMPS FARM, LITTLE CANFIELD***Crumps Farm, Little Canfield, Essex: Archaeological Evaluation***

Ennis, T Braintree : Essex County Council Field Archaeology Unit, 2008, A4, blue spine, 18 pages

Work undertaken by: Essex County Council Field Archaeology Unit

An archaeological evaluation was carried out at Crumps Farm, Little Canfield, Essex, on land adjacent to an existing quarry/landfill site. Thirteen evaluation trenches were excavated. A variety of archaeological remains dating to the medieval, post-medieval and modern periods were recorded. No earlier features were encountered, although the recovery of a small number of abraded Roman finds attest to activity of this date in the area. A small cluster of medieval gullies and pits, dating from the 12th to later 13th century, were excavated in the south of the evaluation area. These features may represent small-scale settlement or agricultural activity close to the position of a former track-way. It is likely that the centre of this activity lies just outside the development area, adjacent to a dogleg in the alignment of a former track. Medieval pottery was also recovered from a series of large field boundary

ditches previously identified as cropmarks. As the majority of these ditches correspond with those shown on the 1842 tithe map the medieval pottery is likely to be residual, possibly deriving from manuring, but does indicate that the field system may have had medieval origins. No significant archaeological remains were identified in the northern part of the evaluation area, while the medieval features noted above were relatively few in number and unlikely to be greatly elucidated by further work. Overall, the archaeological impact of the development would appear to be low. [OASIS(Au)]

ASHDON HALL, CHURCH HILL

Ashdon Hall, Church Hill, Essex: Historic Building Record and Archaeological Monitoring Report

Ashworth, H Letchworth : Heritage Network, 2008, A4, comb bound, green cover, 10 text pages, 8 figures, 12 pages photographic illustrations

Work undertaken by: Heritage Network

Historic building record of Ushaped group of barns to the south of Ashdon Hall. Cartographic evidence demonstrates they have changed very little since late 19th century. Examination of the structure revealed that eastern range likely to be earliest and has been tentatively dated to the mid 18th century. Southern and western ranges likely to have been erected in the early 19th century. Monitoring of ground reduction to the south of the barns revealed the remains of a brick path and a gravelled farmyard surface. No other features, deposits or artefacts of archaeological interest were observed. [OASIS(Au)]

1-3 FAIRCROFT ROAD, SAFFRON WALDEN***1-3 Faircroft Road, Saffron Walden, Essex. Archaeological Excavation***

Germany, M Chelmsford : Essex County Council Field Archaeology Unit, 2007, A4, 11 pages of text and tables, 4 figures

Work undertaken by: Essex County Council Field Archaeology Unit

Essex County Council Field Archaeology Unit undertook a small archaeological excavation at 13 Faircroft Road, Saffron Walden, in advance of the construction of two small apartments. One of the aims of the excavation was to look for the eastern arm of the medieval town ditch (the Magnum Fossatum). The excavation found remnants of post-medieval/modern roadside buildings, but no medieval features or finds, nor any trace of the Magnum Fossatum. It is concluded that much of the eastern arm of the Magnum Fossatum runs beneath Faircroft Road, and that Faircroft Road is post-medieval in origin. [OASIS(Au)]

FORMER WHITE HORSE PUBLIC HOUSE***Land Rear of the Former White Horse Public House . Archaeological Evaluation by Trial Trenching***

Pocock, M Chelmsford : Essex County Council Field Archaeology Unit, 2007, A4 Blue spine

Work undertaken by: Essex County Council Field Archaeology Unit

The principal archaeological remains identified to the rear of the Former White Horse Public House consisted of post-medieval features and deposits that included several wall alignments, associated post-holes and floor surfaces. Relating to and overlying these was a series of 18-19th century build-up, dumped deposits, and modern yard surfaces. This provided evidence to suggest that, subsequent to the culverting of the river Slade that runs through the south end of the site, the open yard area formerly

contained at least two phases of brick-built structures possibly representing remains of out-buildings and a stable block that were likely associated with the public house and which are evident on historic mapping. These post-medieval remains sat above of a well-mixed gravel-rich layer that overlay the natural deposit in place of any clean subsoil or topsoil. Beneath this layer was evidence for survival of earlier remains, at a depth of c.1.1m, but these were not fully characterised during this stage of the investigation. This investigation provides evidence for the continual occupation and re-development of the site in the towns' recent history and indicates that there is some potential for survival of earlier remains, perhaps of Medieval date. Overall, the site has potential to contribute to the further understanding of the town's growth, specifically in the area around the market. [OASIS(Au)]

PROPOSED RYANAIR HANGAR, STANSTED AIRPORT

Proposed Ryanair Hangar, Stansted Airport, Essex. Archaeological Evaluation Report (Stage 1)

Framework Archaeology Oxford : Framework Archaeology, 2007, 16pp, figs, tabs, refs

Work undertaken by: Framework Archaeology

Up to six ditches or gullies were revealed within the area of the proposed access road. Five of the ditches were excavated, one of which produced dating evidence that suggested it was of Late Iron Age or early Roman date. A second smaller ditch or gully produced a fragment of fired clay, probably oven or hearth lining. Three trenches located along the northern boundary of the site revealed that modern truncation reduced this area by a depth of 2.0m resulting in the destruction of any archaeological deposits which may have been present. Research Archive Report for Excavations to the Rear of 71-77 High Street, Berkhamsted, Hertfordshire

Nicholson, K Hertford : Archaeological Solutions, 2007, 34pp, figs, tabs, refs, CD

Work undertaken by: Archaeological Solutions

An archaeological excavation was carried out at the site and revealed medieval back yard activity mainly consistent with domestic rubbish disposal in area B. Parallel post hole alignments in Area A, also identified in evaluation Trench Three and extending into Area B, were thought to represent fences or lines of posts flanking a path shown on the 1878 Ordnance Survey Map. Two foundations cuts in Area B one a recut of the other are thought to represent an 18th or 19th century building and a further

building of similar date was attested by brick walls in evaluation trench 1. A small number of features including boundary ditches parallel/perpendicular to High Street, remained undated. [Au(adp)]

STAG LANE, BERKHAMSTED

Stag Lane, Berkhamsted. Geoarchaeological Field Investigation-Preliminary Report

Green, CP Egham : ArchaeoScape, 2007, 8pp, figs

Work undertaken by: ArchaeoScape

Archaeological trenching and geotechnical boreholes were carried out on the site. From the geotechnical borehole record it was obvious that the natural topography of the site had been considerably modified by levelling work involving the emplacement of made ground and probably also the truncation of the natural deposits of the valley floor. Nevertheless at the site the ground surface can be seen to slope down from both the north-east and the south-west boundaries towards the lowest ground forming a weakly defined valley floor extending from west-north-west to east-south-east across the middle of the site. In some places a dark horizon was present immediately above the valley gravel but the photographic record of the archaeological investigation showed clearly that this unit contained modern anthropogenic material including metalwork and plastic sheeting. Nevertheless a geoarchaeological field investigation was undertaken to ascertain the significance of the dark horizon. This involved a borehole survey. [Au(adp)]

ALBURY CHURCH OF ENGLAND PRIMARY SCHOOL, ALBURY

Archaeological Evaluation by Trial Trenching at Albury Church of England Primary School, Albury, Hertfordshire

Germany, M Chelmsford : Essex County Council Field Archaeology Unit, 2007, 16pp, colour pls, figs, tabs, refs

Work undertaken by: Essex County Council

Two archaeological trial-trenches were dug in advance of the proposed construction of a new school hall and play area. The excavation of three engineering trial pits was also observed for the presence of archaeological deposits, features and finds. The trenches and trial-pits revealed the remains of gravel pit, which had been backfilled within the last 160 years. The gravel pit extended across most of the development area, and contained fragments of tile, late 18th/early 19th-century brick, and pieces of post-medieval and modern pottery. The oldest find was a residual piece of unglazed sandy orange ware dating from the 14th to 16th century. It was decided that the construction of the new school hall and play area would have minimal impact upon the archaeological resource of Albury. It is likely that most, if not all, of any archaeological deposits and features that may have been previously present had been severely denuded or destroyed by the gravel pit. [Au(abr)]

Land between 82 & 84 High Street, Buntingford, Herts. Archaeological Evaluation Report

Saunders, G Letchworth : Heritage Network, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Heritage Network

An archaeological evaluation was carried out at the site and revealed that in trench 1a post-medieval boundary ditch, pit and boundary wall and an undated ditch and post hole was encountered. Trench Two revealed evidence of a substantial post-medieval brick building which appears to be shown on the 1877 Ordnance Survey Map. The majority of the building appears to be located to the northwest of the present site. An early 19th century brick built drain was also observed. Earlier activity on the site was suggested by the presence of heavily abraded early Roman and medieval pottery sherds which were considered to be residual within later features and layers. The High Street formed part of the alignment of Roman Ermine Street. [Au(adp)]

A602 Corridor Improvements Ware Road Realignment Archaeological Works. Phase 1 Non-Intrusive Evaluation

Philips, M Bedford : Albion Archaeology, 2007, 39pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

A non-intrusive archaeological evaluation (field walking survey) and desk-based assessment was carried out at the site as part of phase 1 of the works. The desk-based assessment revealed that no significant archaeological remains were located within the development area. However, the wider study area contained evidence for a wide variety of archaeological remains ranging in date from the prehistoric to the post-medieval periods. These included prehistoric ring ditches and enclosures, a Roman road, surface finds and settlement evidence, medieval settlement and surface finds and post-medieval landscape features. The field walking survey covered the development area and a c. 20m buffer within adjacent arable land. A small assemblage of artefacts were recovered dating from the prehistoric, Roman and medieval periods with few significant concentrations of material. The great majority of the recovered material was post-medieval or modern in date. The varied surface conditions across the survey area limited the comparative value of the results of the work. TENNIS COURT RECREATION GROUND, SCHOOL LANE, WATTON-AT-STONE
Tennis Court Recreation Ground, School Lane, Watton-At-Stone, Hertfordshire. Archaeological Evaluation by Trial Trenching

Robertson, A Chelmsford : Essex County Council Field Archaeology Unit, 2007, 12pp, colour pls, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

An archaeological evaluation was carried out at the site and revealed a single east-west oriented ditch containing Roman pottery and degraded bone. The ditch corresponded with crop marks evident in aerial photography, indicating a possible Roman road to the west of the development. It was probable that the ditch was the southern of the two ditches identified by aerial photography but no sign of any road remains were identified. [Au(adp)]

THE MANOR HOUSE, 14A HIGH STREET, BALDOCK
The Manor House, 14a High Street, Baldock, Archaeological Impact Assessment, Archaeological Evaluation and Historic Building Impact Assessment

Goldsmith, A & Prosser, L & Henry, K & Williamson, I & Woolhouse, T Hertford :
 Archaeological Solutions, 2007, 97pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

In August 2007, an archaeological impact assessment, trial trench evaluation and historic building impact assessment was undertaken of the existing buildings and associated land at 14a High Street. The site lay in the historic core of Baldock, in an area of known potential for late Iron Age and Roman remains. The site would also have been within the commercial centre of the medieval town. Despite this potential, the trial trench evaluation found only a few later post-medieval and undated features typical of activity in the backyard or garden of an urban property. A single residual late medieval potsherd was also found. The ground disturbance caused by the proposed redevelopment was therefore deemed to have a negative archaeological impact. [Au(abr)]

THE PRIORY, ROYSTON

The Priory, Royston, Hertfordshire. An Archaeological Evaluation

Newman, R Cambridge : Cambridge Archaeological Unit, 2007, 65pp, colour pls, figs, tabs, refs

Work undertaken by: Cambridge Archaeological Unit

The evaluation recorded numerous features relating to four distinct phases of activity. The earliest elements were associated with an Augustinian priory founded on the site in 1184. Remnants of probable claustral structures were identified from this period, along with at least four burials. Following the Dissolution of the priory in 1537, a manor house was established that appeared to have reused several of the earlier monastic buildings. Parts of its western range and a probable lodge-house were investigated. After the construction of a new timber-framed mansion in the early 17th century the area was extensively landscaped, before finally being put to horticultural use in the 19th century. [Au(adp)]

Work undertaken by: Archaeological Services & Consultancy Ltd.

An archaeological evaluation observed substantial peat deposits and preserved wood in the trenches in the northern part of the site. According to pollen evidence the date of the peat formation should lie between 6000-5000BP (early Neolithic or sub-boreal) for the lower level and for the upper peat a Neolithic or later age. The lower level was confirmed by a C14 date on the wood which gave a reading of 6060+-35BP. [Au(adp)]

HMS Warrior, Northwood, Three Rivers District, Hertfordshire. Results of Archaeological Evaluation

Capon, L Twickenham : AOC Archaeology Group, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was carried out between 2006 and 2007 at the site in advance of construction works. Two trenches revealed 19th century structures relating to Eastbury Lodge which was established in the 18th century. These were an ice house and a summer house. Two other trenches revealed no archaeological remains. The evaluation comprised four trenches in total. A second phase of evaluation was due to be conducted. Overall the requirement for further archaeological deposits to be present within the areas earmarked for construction was limited. This was due to the location of the site upon what was formerly farmland and parkland. There had also been a considerable amount of landscaping conducted on the site since the Second World War. Brogan, G, Unger, S, Williamson, I & Woolhouse, T Hertford : Archaeological Solutions, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological evaluation was carried out at the site and revealed some disturbance to the ground caused by the construction of the gardens on nos 21,23 & 25 School Lane in the 1950s. Nonetheless a well was located in Trench Three and this was backfilled during or after the mid 2nd century AD. The area to the front of the houses was less disturbed. Within Trench 1, Roman features were very well preserved. These consisted of a boundary ditch an isolated pit, a beam slot for a timber wall, and an associated chalk floor surface. These features have all been dated to the first half of the 2nd century. [Au(adp)]

CHURCH FARM, THE STREET, GOODERSTONE

Church Farm, The Street, Gooderstone, Norfolk. An Archaeological Evaluation

Adams, H, Hogan, S, Mundin, A, Weston, P & Woolhouse, T Hertford : Archaeological Solutions, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Church Farm, The Street, Gooderstone

A desk-based assessment had found some potential for the discovery of prehistoric remains. The evaluation revealed a scatter of archaeological features across the site, including a Saxon ditch, pit and cultivation soil. Medieval features included a ditch and a buried soil, probably representing property boundaries and "backyard" activity adjacent to occupation areas. Saxon and medieval features were sealed by post-medieval made ground layers and yard surfaces associated with the farm buildings that had occupied the site since the early 19th century. When viewed alongside other fieldwork in the area, the site may have contributed to understanding of medieval settlement patterns and to what extent they developed from early Saxon origins. NORWICH NORTHERN DISTRIBUTOR ROUTE

Norwich Northern Distributor Route. Archaeological Evaluation by Trial Trenching

Trimble, G & Watkins, P Norwich : NAU Archaeology, 2008, 78pp, colour pls, figs, tabs, refs

Work undertaken by: NAU Archaeology

Evaluation was carried out following a programme of systematic fieldwalking and metal-detecting. Three sites were investigated where significant cropmarks were identified, with those in Taverham found to be a series of enclosures and linear features of probable medieval date. It was possible that an earlier Roman phase was also present. A possible Saxon or Iron Age ditch was also encountered. Other areas found possible Neolithic pits, medieval metalwork perhaps relating to a fair [coins, tokens and trade weights], and a ploughed-out Bronze Age round barrow with a pit in the centre, although this was probably not contemporary to the ring ditch. Work undertaken by: Oxford Archaeology North

Ninety-five cores were taken to a depth of 2m to reveal a complex sequence of Flandrian sedimentary deposits, overlaying a fissured chalk bedrock. It was suggested that the site contained a palaeochannel with adjacent transitional environments such as a dryland ridge or river levee. It was possible that the development area had the potential for archaeological remains to be preserved in situ, and as a result, further work was recommended. [Au(adp)]

GRIMSTON WARREN (WEST)

Grimston Warren (West). Archaeological Earthwork Rapid Identification Survey

Cushion, B Norwich : Brian Cushion, 2007, 17pp, pls, figs, refs

Work undertaken by: Brian Cushion

The major surface features encountered during the evaluation were the newly delineated various extraction pits. Associated with these were short earthwork sections of tramways, part of a system partially mapped in the 1880s, and recorded outside the remit area from air photos. Several smaller depressions were noted, possibly extraction or bomb craters associated with the WWII bombing range to the north. An observation tower and a terraced platform were also of that period. A probable medieval boundary bank was noted along the southern edge of the warren, with a parallel internal bank, possibly of contemporary date. Two likely Bronze Age barrows were noted, one more prominent than the other. Much of the area was forested in 1960 and appeared to have been ploughed, as narrow, slight ridges and furrows were noted in many locations. Many of the ridges marked on the OS map had slight banks on each side. [Au(abr)]

Pole, C, Adams, H, Hogan, S & Woolhouse, T Hertford : Archaeological Solutions, 2007, 41pp,

colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The evaluation revealed two phases of archaeology. Phase 1 dated to the late Saxon/Saxo-Norman period, consisting of roadside pits and ditches, and Phase 2 to the post-medieval/modern period, comprising walls, a floor surface and made ground deposits consistent with roadside occupation along Church Lane. The Phase 1 remains were considered significant, as they may have related to the late Saxon/Saxo-Norman development of Marham. [Au(adp)]

THE FORMER EASTERN ELECTRICITY OFFICES, DUKE STREET, NORWICH

An Archaeological Evaluation at the former Eastern Electricity Offices, Duke Street, Norwich in advance of the Dukes Wharf Re-development

Emery, G Norwich : NAU Archaeology , 2007, 110pp, colour pls, figs, tabs, refs

Work undertaken by: NAU Archaeology

Excavations of six trial trenches at the site revealed features of probable 11th century to modern date. Evidence of Saxo-Norman quarrying of the chalk scarp running along Westwich Street-Charing Cross was identified at the rear of the site, with a contemporary well-preserved timber structure possibly forming a walkway close to the Saxon foreshore. Numerous leather offcuts were collected, probably cobbling or clothing waste. The foundations of two possible 15th century stone buildings were found below the modern make-up in two trenches near the centre of the site. These impressive structures

rested above flint and mortar foundations of a likely 14th century construction. The lost medieval lane of Bleckstershole appeared to demarcate the western extent of the Duke of Norfolk's palace complex, believed to have run from north to south on the eastern side of the former Eastern Electricity Board Social Club building. Brick foundations and preserved rail-lines which once formed part of the Bullard's Anchor Brewery were revealed in the western area of the site. A fairly large finds assemblage was found, including residual food waste associated with a high status diet. This included an example of a cetacean bone such as a porpoise or dolphin, one of the most expensive medieval food items. A sealed late medieval cup weight box [perhaps still containing a set of weights] and a late Saxon carved bone tool, possibly for use as a writing implement, were also recovered. [Au(adp)]

CAISTOR HALL HOTEL, CAISTOR ST. EDMUND

An Archaeological Window Sampling Evaluation at Caistor Hall Hotel, Caistor St. Edmund, Norfolk

Crawford, R & Emery, G Norwich : NAU Archaeology , 2007, 13pp, Spiral bound, unpublished client report. Tabulated information in appendices

Work undertaken by: NAU Archaeology

In March 2007 NAU Archaeology undertook a window sampling survey to the rear of Caistor Hall Hotel. A total of ten samples were taken on an area of land proposed for a conservatory extension to the hotel. The deposits were mainly characterised as late post-medieval landscaping or garden soils which included a few fragments of late post-medieval brick and tile. The earliest deposits were from a layer of silty-sand just above the natural sand. This layer appears to equate to a bio-turbed soil horizon of Romano-British date encountered in an earlier evaluation also conducted by NAU Archaeology. [OASIS(Au)]

BELL MEADOW, HINGHAM*An Archaeological Evaluation at Bell Meadow, Hingham, Norfolk*

Bates, S Norwich : NAU Archaeology , 2007, 29pp, colour pls, figs, tabs, refs

Work undertaken by: NAU Archaeology

Eight evaluation trenches were excavated across the site of a former brickworks and kiln, revealing for the most part undisturbed natural clay and sand. Thick redeposited layers of the same probably related to quarry infilling. In one trench, part of a flint of brick building was recorded, probably relating to the brickworks but unlikely to be a kiln. A single sherd of post-medieval pottery was probably residual in the context in which it occurred. Quantities of brick, tile, pottery and glass bottle recovered from the site were all of a post-medieval date. [Au(adp)]

LAND AT LIME TREE AVENUE, LONG STRATTON*Land at Lime Tree Avenue, Long Stratton, Norfolk. An Archaeological Evaluation*

Weston, P Hertford : Archaeological Solutions, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An evaluation was carried out prior to the determination of a planning application to develop the site. This revealed five undated ditches and four pits. The ditches were located in the southern sector of the site, were parallel to each other and were oriented north-north-west to south-south-east. The four pits were located in the north-east corner of the site, and shared similar dimensions, morphology and fills, indicating that they may have been contemporary. Struck flint recovered from one of the fills suggested a prehistoric date. One fill produced a fragment of post-medieval brick and a residual struck flint. [Au(adp)]

Archaeological Evaluation at 8 High Street, Castor, Peterborough

Cope-Faulkner, PSleaford : Archaeological Project Services, 2008, 32pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Project Services

The evaluation revealed a sequence of deposits. Three ditches and a hollow were dated to the 12th-13th centuries, and had been sealed beneath subsoil. Later activity was represented by two furrows and a gully, also probably medieval. Medieval pottery was abundant across the site, although one sherd of Roman pottery and three post-medieval sherds were also collected. Brick-tile and fired clay, along with some animal bone, was recovered. Environmental data indicated the processing of cereals at the site. [Au(adp)]

LAND OFF STOREYS BAR ROAD

Archaeological Evaluation of Land off Storey's Bar Road Peterborough, Cambridgeshire

Meadows, I Northampton : Northamptonshire Archaeology, 2007, 110pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An evaluation comprised a programme of trial trenches, to assess the archaeological potential of land off Storey's Bar Road, adjacent to the Flag Fen archaeological site. Because of the high potential for associated remains and the depth of overburden, trenches were the only way to assess the presence or absence of remains. In total 2300m of linear trenches were excavated, but no cut features and only a few pieces of possibly worked wood were recovered. The majority of the evidence was for horizontally bedded fen deposits in a sequence that was common across the assessed area. It was clear this area had not been a focus for human activity in the past, apart from limited evidence for coppicing. [Au(abr)]

An Archaeological Evaluation at Hereward Community College and John Mansfield School, Peterborough

Spalding, M & Brown, J Northampton : Northamptonshire Archaeology, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological trial trench evaluation was carried out at three sites, Hereward Community College (Site A), John Mansfield School main site (Site B), and John Mansfield School satellite site (Site C). Seven trial trenches were excavated at Site A, immediately west of the course of the Car Dyke Roman watercourse. Trial trenches in the northern end of the site contained relatively shallow deposits of topsoil and recent subsoil, and no archaeological features or finds were present. In the southeastern trenches, deep deposits were recorded, including a thick blanket of subsoil and organic-rich buried soils. TT7 contained a single undated posthole, cut into natural clay deposits. TT11 contained a cluster of undated post holes, cut into natural clay deposits and sealed by an undated buried subsoil. TT10, located perpendicular to the course of the Car Dyke, contained an undated clay bank and a sequence of undated buried soil deposits that may be associated with the construction or maintenance of the Car Dyke. Four trial trenches (TT12-15) were excavated at Site B. No archaeological features or finds were present. Four trial trenches (TT1-4) were excavated at Site C. No archaeological features or finds were present [Au(abr)]

ORTON HALL, ORTON LONGUEVILLE, PETERBOROUGH***Orton Hall, Orton Longueville, Peterborough. Archaeological Evaluation and Excavation Interim Report***

Weston, P Hertford : Archaeological Solutions, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The excavation revealed archaeological features of Saxo-Norman, late medieval/early post-medieval, post-medieval and modern dates. The Saxo-Norman activity was consistent with agricultural activity. The truncated remains of a probable 16th century building were also identified, associated with a cobbled courtyard defined by stone-built boundary walls. The evidence suggested that the construction of the extant 17th century range to the west resulted in the demolition of the northern courtyard wall and the abandonment of the cobbled courtyard. Similarly, the construction of the 18th century stables to the east led to the final demolition of the 16th century house. The building remains were further truncated by 20th century development. LAND AT THE WESTERN EDGE OF SOUTHCHURCH PARK, VICTORIA ROAD, SOUTHEND

An Archaeological Evaluation on Southchurch Park for Anglian Water, November 2007

Spurgeon, E Colchester : Colchester Archaeological Trust, 2007, 6pp, figs

Work undertaken by: Colchester Archaeological Trust

The site was the subject of an evaluation in advance of a flood alleviation scheme. Two trenches were excavated (T1-T2). T1 was 1.3m long and varied between 1.1 and 1.9m wide, and T2 was 1.1m long by 1.9m wide. The trenches were excavated through five horizons: a topsoil remnant (L1), subsoil (L2), dark brown silty clay (L3), medium orange/brown silty clay (L4), and light orange natural boulder clay (L5). The clayey silt topsoil contained sparse scraps of modern building material which did not exceed 30 cm in depth. The dark brown clay subsoil layer ranged in depth between 10 and 18 cm. In T1 this layer was densely filled with small stones, cement dust, sand and small brick fragments, but in T2 there was only the silty clay with modern brick fragments. L3 was the deepest of the layers, ranging from 20 and 62 cm in depth. L4 varied between 28 and 38 cm in depth and L5 was natural. L1-L5 yielded no finds but included a number of flecks of chalk and iron stone. There were two features, one in each trench, and both were linear. F1 varied in depth between 20 and 40 cm. It included a handful of modern glazed pottery. Two worked flint scrapers were found in the lowest part of the fill (not from a section). F2 was 38 cm deep and contained no finds. The trenches were excavated to a depth of between 30 and 90 cm, at which point the silty clay layers ceased and the solid natural clay began. No archaeological material or features were observed during the course of the evaluation. The thin layer of topsoil and small amount of subsoil overlying natural geological material may indicate that the area had been subjected to some degree of reduction or levelling in the relatively recent past. This would account for the absence of archaeological and environmental material identified in the evaluation. [Au(abr)]

GREAT GREEN FARMHOUSE, GREAT GREEN, COCKFIELD

Archaeological Evaluation Report. Great Green Farmhouse, Great Green, Cockfield

Gill, D Ipswich : Suffolk County Council Archaeological Service, 2007, 18pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Suffolk County Council Archaeological Service

An evaluation on the edge of the medieval green at the site was completed in advance of the construction of two dwellings. A pond that had been part infilled in antiquity, with early post-medieval brick and tile rubble, was sampled and produced a cylindrical, glazed red earthenware jar, dated to the 16th-18th century. Evidence suggested that the pond was man-made and the edge was consolidated with timber posts. The pond was part of a group of linear ponds that formed an intermittent wet boundary around the green. Evidence of out-buildings which were shown on the 1880 OS map and an undated field boundary ditch was also found. [Au]

Archaeological Evaluation Report. Polstead Churchyard, Polstead

Gill, D Ipswich : Suffolk County Council Archaeological Service, 2007, 9pp, colour pls, figs, tabs, refs, CD

Work undertaken by: Suffolk County Council Archaeological Service

An evaluation was carried out in the area of a proposed extension to Polstead Churchyard. A group of small pits, Early Bronze Age pottery and flintwork suggested a degree of settlement activity on the site and its commanding position overlooking the valley of the River Box would be typical of a prehistoric settlement. A field boundary ditch, thought to be medieval in date was also found. The archaeological horizon was sealed beneath a deep layer of re-deposited soil. This included small, post medieval tile fragments and had a high flint content. This may have been building debris associated with the church and transferred to this location as grave excavation spoil. [Au(abr)]

PRIORY STADIUM

Priory Stadium, Sudbury. A report on the archaeological evaluation

Heard, K Ipswich : Suffolk County Council Archaeological Service, 2007,

Work undertaken by: Suffolk County Council Archaeological Service

Sudbury, Priory Stadium (TL 8706 4082; SUY 082). A trial trench evaluation was carried out at the above site in advance of residential development. 19 trenches (total area 584m²) were excavated, representing approximately 4% of the site. The evaluation revealed a sequence of sediments deposited by the River Stour and at least one former N-S watercourse that remained open until the 19th century. In places layers of cultivation soil and former topsoil sealed the sediments, demonstrating agricultural use of the site in the post-medieval period. Generally the site was covered by at least 1.0m of modern dumping associated with the construction and use of the Priory Stadium in the late 19th and 20th centuries. [OASIS(Au)]

PRIORY STADIUM, SUDBURY

Priory Stadium, Sudbury: a palaeoenvironmental assessment of deposits encountered during ground investigations

Hill, T & Jolliffe, C

Birmingham : Birmingham Archaeo-Environmental, 2007, 26pp, colour pls,

figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Sedimentary coring at Priory Stadium was undertaken to complement the archaeological excavations taking place at the site. Fieldwork identified a stratigraphic archive consisting of alluvial clays and silts with occasional layers of organic-rich silts, sands and peats. Upon analysis of the spatial distribution of the organic deposits, it was concluded that at least two phases of in-situ organic accumulation have occurred since sedimentation began at the site. A palaeochannel may also be present within the deposits, and may reflect a former channel of the River Stour, which is located to the south. Although a precise timescale for the development of the sedimentary sequence is unknown, it was suggested that the deposits may have dated back to the Mid-Holocene (c. 4-5,000 yrs BP). In order to fully understand the palaeoenvironmental history of the site, it was suggested that pollen and beetle assessments should be undertaken on the organic-rich deposits believed to represent the two phases of organic accumulation. AMS radiocarbon dating should also be undertaken on the top and base of each organic unit to establish the timing of the onset and cessation of organic deposition. [Au]

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation consisting of a series of test pits at Brandon Remembrance Playing Fields, in advance of the use of the site for allotments, did not locate any archaeological deposits. The trenching showed that the natural subsoil and potential archaeological levels lay at a depth of at least 1.2m, sealed beneath substantial deposits of peat that have developed due to the sites location within the floodplain of the adjacent Little Ouse River. SMALL FEN LANE BRANDON

Archaeological monitoring report. West End House, Fen Lane, Brandon

Tester, A Bury St. Edmunds : Suffolk County Council Archaeological Service, 2008, 3 pages
no cover

Work undertaken by: Suffolk County Council Archaeological Service

Monitoring was carried out during extension work at West End House, Small Fen Lane, Brandon as part of planning permission and according to a Brief and Specification for the work issued by R. D. Carr of SCCAS. Although little is known of the site interest is generated by extensive evidence from the flood plain of the Little Ouse for occupation remains dating from prehistory through the Saxon Period. An archaeological monitoring uncovered the course of a ditch running beneath a new building extension. No finds were recovered and the ditch remains undated. [OASIS(Au)]

35 THE STREET, ICKLINGHAM

Archaeological Evaluation Report. 35 The Street, Icklingham

Gill, D Ipswich : Suffolk County Council Archaeological Service, 2007, 16pp, figs

Work undertaken by: Suffolk County Council Archaeological Service

Rubbish pits dated by pottery were excavated during an evaluation at the site. The pits were concentrated alongside the road frontage and the pottery suggested two previous periods of occupation in the 12th-14th century and the 16th-18th century. Building materials, including 13th-15th century bricks and degraded clay lump, were also found but the site of a building was not identified. The medieval pottery consisted mainly of coarse wares but included a fragment of a Grimston Glazed ware jug, dating to the Late 12th-14th century. A single unstratified sherd of a Roman greyware and a fragment of Thetford ware, dating to the Late Saxon period, were also found. [Au(abr)]

WEATHERHILL FARM ICKLINGHAM***Weatherhill Farm, Icklingham***

Tester, A Bury St. Edmunds : Suffolk County Council Archaeological Service, 2007, SHORT
Work undertaken by: Suffolk County Council Archaeological Service

The conversion of redundant barn buildings into 4 dwellings with attendant parking at Weatherhill Farm, Icklingham was subject to an archaeological monitoring during the excavation of footings. The conditions were set out in a Brief and Specification by Jess Tipper (Suffolk County Council Archaeological Service, Conservation Team) to fulfil a planning condition on application F/2005/1003. The work was funded by the developer Mr Browning. The site is situated on south facing gently rising ground above the floodplain of the River Lark (c. 25m OD). Interest in the site is focused on the location of a Roman road which passes through the field to the south of the farm and the attendant Roman settlement. [OASIS(Au)]

Archaeological Evaluation and Excavation Report 333a to 389 Bramford Road, Ipswich. A Report on the Archaeological Evaluation and Excavation

Heard, K Ipswich : Suffolk County Council Archaeological Service, 2008, 50pp, colour pls, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

Trial trench evaluations were carried out in advance of a residential development. 22 trenches (total area 590m²) were excavated, representing approximately 3% of the site. Positive results in the south western part of the site led to a limited excavation of approximately 80m². A dense concentration of small pits or post holes (some containing worked flints) in the south western part of the site was assumed to indicate activity during the later prehistoric period, although the precise nature of this activity was unknown. Elsewhere on the site the only archaeological features were two ditches and a possible pit, all undated. Most of the site was quarried for gravel in the late 19th century, destroying any archaeological evidence that might have existed. [Au(abr)]

CROWS HALL

Crows Hall, Debenham. Record of an Archaeological Evaluation and Monitoring

Boulter, S Ipswich : Suffolk County Council Archaeological Service, 2008, Unbound A4 document

Work undertaken by: Suffolk County Council Archaeological Service

DBN 124 An extensive programme of refurbishment to the standing building included below ground disturbance to archaeological deposits. A trenched evaluation and subsequent monitoring facilitated the full recording of all exposed archaeological features. The earliest securely dated features were two pits recorded in one of the evaluation trenches excavated to the east of standing building. Ceramic evidence recovered from their fills suggested a medieval date, although accompanying tile/brick may have been later. Two flint and mortar walls seen to the north of the standing building, but on a slightly different alignment, were also consistent with a medieval date. Considerable evidence was also recorded for

structures relating to the 16th century, Tudor, phase of the hall. This included wall stubs proving that east and south range had originally been present along with a similar range of rooms to the south of the gatehouse that mirrored the extant structure to the north. There was also evidence proving that the original gatehouse had been a discrete square structure and the flanking rooms to the north and south were a secondary construction, although possibly undertaken not long after the initial phase. Wall stubs recorded north of the surviving north range confirm the presence of contemporary structures on the north-west corner of the moated platform. Later structures (mostly 19th century) included sections of moat revetment wall, two soakaways, drains, a chimney base and chambers and chutes for an outside lavatory, the latter known from the early OS maps. PEAR TREE HOUSE, GREAT FINBOROUGH

Site of Pear Tree House, High Road, Great Finborough

Good, C Bury St. Edmunds : Suffolk County Council Archaeological Service, 2006,

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation was undertaken in advance of the construction of a number of dwellings on the site of Pear Tree House, Great Finborough, in order to characterise the nature of any surviving archaeological deposits. The site lies on the outskirts of Great Finborough, a village at least medieval in origin, and is thought to be sited on or near the edge of a former medieval green. Three trenches were excavated over the development area, and were stripped to the level of the natural subsoil. Three pits, thought to be post medieval or modern in date were discovered in the centre of the plot, but no further archaeological evidence was revealed. No conclusive evidence to indicate the former presence of a medieval green in the area was recorded during the evaluation, though a few sherds of this date were recovered as residual finds. HAVERHILL, EHRRINGHAUSEN WAY***Archaeological Evaluation of land off Ehringhausen Way, Haverhill, Suffolk***

Holt, R Sleaford : Archaeological Project Services, 2007, A4 Com Bound

Work undertaken by: Archaeological Project Services

An archaeological evaluation was carried out on land at Ehringhausen Way, Haverhill, Suffolk. The land is subject to planning consent for commercial development. The site lies in an area of archaeological potential. The Suffolk County Council Archaeological Service identified the site as archaeologically sensitive due to early occupation deposits located in this part of the River Stour valley. Previous archaeological works in the vicinity identified occupation of Iron Age or possible early Saxon date. During the course of this evaluation, which was targeted on the new development foundations, a number of dump deposits were identified. These were all modern in date and relate to terracing of the site during the construction of the leisure centre and associated football pitches and tennis courts during the 1970's. [OASIS(Au)]

LAND NORTH-WEST OF HAVERHILL

Archaeological Evaluation Report. Land Northwest of Haverhill, Suffolk

Craven, J A Ipswich : Suffolk County Council Archaeological Service, 2007, 143pp, colour pls, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation in advance of potential development on c.45ha of agricultural farmland to the north-west of Haverhill identified isolated and insubstantial pre-medieval deposits throughout the site and a network of post-medieval drainage ditches and field boundaries, as partly seen on 19th century mapping. The evaluation also identified an area, c.1.5ha in extent, of medieval settlement activity in the 12th-14th centuries, with a possible Late Saxon or early medieval origin. A further part of this occupation was seen in the adjacent evaluation. Identified features demonstrated the presence of possible buildings, rubbish pits and subdivision of land extending along either side of the access track to the former sites of Alderton Chapel and Chapel Farm. Future development would disturb important evidence of medieval settlement associated with the Chapel and so open area excavation and further documentary research was recommended. [Au]

LAND AT BOYTON HALL, HAVERHILL**Archaeological Evaluation Report. Land at Boyton Hall, Haverhill, Suffolk**

Craven, J A Ipswich : Suffolk County Council Archaeological Service, 2007, 48pp, colour pls, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation in advance of potential development at the site identified two Roman features and part of a substantial phase of medieval settlement activity in the 12th-14th centuries, with a possible Late Saxon or Early medieval origin. The larger part of this occupation evidence was seen in the adjacent evaluation. Identified features demonstrated the presence of possible buildings, rubbish pits and subdivisions of land extending along the north side of the access track to the former sites of Alderton Chapel and Chapel Farm. Future development would therefore disturb important evidence of medieval settlement associated with the Chapel and so open area excavation and further documentary research had been recommended. RISBY BUSINESS PARK**Evaluation Report. Risby Business Park, Bury St. Edmunds**

Gill, D J Bury St. Edmunds : Suffolk County Council Archaeological Service, 2007, Standard SCCAS report, soft bound A4

Work undertaken by: Suffolk County Council Archaeological Service

An evaluation at Risby Business Park was carried out in advance of the redevelopment of the site. A small quantity of unstratified Iron Age and medieval pottery was found but an extensive area within the centre of the site had been severely truncated by the previous development and any potential archaeological deposit was already lost. An infilled pond and two post-medieval field boundary ditches were also found. [OASIS(Au)]

NEW MUSEUM BUILDING, WEST STOW***New Museum Building, West Stow Anglo Saxon Village***

Gill, D J Bury St. Edmunds : Suffolk County Council Archaeological Service, 2007, Standard SCCAS client report, soft bound, A4

Work undertaken by: Suffolk County Council Archaeological Service

Two trenches were excavated as part of an archaeological evaluation of the proposed site of the new museum building at West Stow Country Park. This revealed the remains of an ancient occupation soil, which produced two sherds of Early Saxon stamped pottery. The occupation soil had been truncated by ploughing and occurred only in within hollows. Post holes and possible pits were also found suggesting that the sampled area was within the spread of the Anglo-Saxon settlement site. [OASIS(Au)]

LAND OFF BELLS LANE/ROPES DRIVE

Land off Bell Lane/Ropes Drive, Kesgrave

Everett, L Bury St. Edmunds : Suffolk County Council Archaeological Service, 2007,

Work undertaken by: Suffolk County Council Archaeological Service

Evaluation on land off Ropes Drive/Bell Lane, Kesgrave, was required to investigate the archaeological potential of the site. Two undated, burnt pits were recorded and one abraded sherd of medieval pottery was found within a layer of subsoil. A standing earthwork, comprising a bank and ditch, was present in the wooded north east corner of the site. Documentary evidence suggests that this is the boundary of a wood which was established by 1723 and probably has much earlier origins. [OASIS(Au)]

CHURCH OF ST. ANDREW, WALBERSWICK

The Church of St. Andrew, Walberswick. Record of an archaeological evaluation and excavation

Boulter, S P Ipswich : Suffolk County Council Archaeological Service, 2007, Unbound A4 document

Work undertaken by: Suffolk County Council Archaeological Service

Provision of a new disabled toilet at the Church of St. Andrew, Walberswick included considerable ground disturbance within the body of the nave of the medieval church (now ruined). Three trenches were manually excavated as an evaluation on the line of the proposed sewer within the body of the church, and subsequently the sewer trench itself was excavated by archaeologists. No medieval floor surfaces were encountered, although pammments had been re-used and lain as a semi-formal surface immediately south of the doorway. Generally, the soil profile comprised c.0.20-0.30 metres of sandy loam topsoil over a further c.0.20-0.30 of brown stony sand, with localised sandy layers and inclusions of tile, brick and lime mortar, with the naturally occurring podsolised sand subsoil encountered at a depth of c.0.6 metres. A linear feature crossing the evaluation trench was not subsequently identified in the sewer trench itself. However, the cuts for three presumed burials were recorded continuing on down into the subsoil beyond the excavated depth of the trench. These remained undisturbed. One other feature, with evidence for in-situ burning, was recorded towards the northern end of the sewer trench and was interpreted as a hearth used to melt lead during the partial demolition of the nave and north aisle. The flint rubble and lime mortar footing for the north wall of the nave was found to continue uninterrupted across the north doorway, the vestiges of a sandstone threshold was recorded during the evaluation stage of the project. BROADLAND SANDS HOLIDAY PARK*Broadland Sands Holiday Park, Corton*

Good, C Bury St. Edmunds : Suffolk County Council Archaeological Service, 2007,

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological evaluation was undertaken in advance of an extension to the holiday park at Broadland Sands, Coast Road, Corton, in order to characterise the nature of any surviving archaeological deposits. The site is immediately adjacent to a medieval church, and close to scatters of Prehistoric, Roman and medieval finds. Twelve trenches were excavated over the development area, and were stripped to the level of the natural subsoil. Six of the trenches, in particular the ones adjacent to the church, produced no archaeological evidence. In the trenches in the north east corner of the plot, and so furthest from the church, a number of ditches were identified, many with Thetford type ware pottery within. This Late Saxon pottery has not been found previously in this area and is probably indicative of a small settlement nearby, with the ditches forming field or property boundaries. The lost Domesday vill of Newton is known to have existed somewhere in this immediate area and these findings may be part of this settlement. [OASIS(Au)]

Everett, L Bury St. Edmunds : Suffolk County Council Archaeological Service, 2007,

Work undertaken by: Suffolk County Council Archaeological Service

Evaluation on land at Ilketshall Hall Farm was required to investigate the archaeological potential of the site. Three ditches identified within the trenches may be associated with an early co-axial field system but all finds recovered from their fills were of post-medieval date. Three smaller linear features in Trench 2 appear to be associated with each other and pre-date the larger ditches, containing a small quantity of early medieval pottery. No features contained sufficient evidence to suggest the presence of concentrated occupation in the direct vicinity. [OASIS(Au)]

REEDBED CREATION AND OTHER LANDSCAPING WORK WITHIN THE MARDYKE VALLEY***Reedbed Creation and Other Landscaping Work within the Mardyke Valley, Thurrock. Archaeological Hand Augering and Walkover Survey***

Heppell, E Chelmsford : Essex County Council Field Archaeology Unit, 2007, 26pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

The creation of 12 reedbeds was proposed, covering an area of around 1ha of valley floor. A total of 23 locations were sampled by hand auger, 1-3 per reed bed. These confirmed that an "upper peat" deposit, probably Saxon in date, was present at each location. It was considered that this deposit, the same as the upper peat recorded during the construction of the A13 was likely to be present across the valley floor, masked by overlying clay deposits. The walkover survey identified few features. Those noted were linear dips and short stretches of hedge/shrub which represented the remains of the former field boundaries. [Au(abr)]

Egging, K Salisbury : Wessex Archaeology, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

Of the 24 trenches, 13 contained archaeological features. A further 8 had features of natural origin. The archaeological features found comprised the north-east corner of a large, wide "V" profiled boundary ditch, observed in 8 trenches. A second ditch, much less substantial than the first, also formed the north-east corner of a boundary ditch enclosing a similar area, and was offset from the first ditch to the north-east. It was not possible to determine their relationship during the evaluation. Two further, unrelated linear features were also identified. Seven pits were recorded, mainly near the centre of the site. The pits were investigated and interpreted as quarry pits. A moderate assemblage of worked flint was recovered from the topsoil and subsoil. Only a small assemblage was recovered from secure contexts. The finds included two fragments of Romano-British coarseware, CBM, flint and glass. [Au(abr)]

BARKING TOWN CENTRE. REGENERATION PHASE II, BARKING AND DAGENHAM

Assessment of Archaeological Investigations, Barking Town Centre: Regeneration Phase II, London Borough of Barking and Dagenham

Taylor, JBrockley : Pre-Construct Archaeology Ltd., 2007, 53pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation demonstrated the presence of in-situ Saxon, medieval and post-medieval activity on site. Whilst the evidence for Saxon occupation was minimal, archaeological cut features dating to the 11th/12th centuries were found and comprised a number of structures with associated internal and external pits, aligned with Ripple Road. Later activity attributed to the 13th/14th centuries, the 15th/16th centuries and the 17th-20th centuries suggested that after the disuse/destruction of the earlier medieval buildings the site was largely utilised for pitting and probable agricultural/horticultural activity. NHS LIFT HEALTH CENTRE, AXE STREET, BARKING AND DAGENHAM

An Archaeological Evaluation at NHS Lift Health Centre, Axe Street, London Borough of Barking and Dagenham

Taylor, JBrockley : Pre-Construct Archaeology Ltd., 2007, 37pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation found evidence for natural gravel and sands overlain by a naturally deposited brickearth horizon. A number of undated cut features truncated the natural horizon as did a medieval pit close to the frontage of Axe Street. A plough soil horizon truncated by a late medieval pit sealed the earlier deposits on site suggesting that the site served an agricultural use during the later part of the medieval period through to the early part of the post-medieval period. Evaluation of the southeast corner of the site exposed the presence of a number of late 19th/early 20th century masonry walls apparently associated with structures fronting Axe Street at the turn of the century. Work undertaken by: Museum of London Archaeology Service

The evaluation was carried out following the recommendations of two previous assessments. Although no archaeological finds or features were noted, the site was thought to have good potential for past environmental reconstruction, laying as it did in a palaeochannel that had become infilled with peat. The impact of the proposed development was predicted to be minimal. [Au(adp)]

Clarke, C Twickenham : AOC Archaeology Group, 2007, 28pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was carried out at the site and revealed that out of five trenches, two trenches contained archaeological features, comprising an 18th century ditch, a post-medieval pond and a smaller undated ditch. All features encountered are thought to be linked with landscaping associated with the construction of Grove House in 1753 immediately to the west of the site. The evaluation trenches showed that 19th and 20th century disturbance and truncation of deposits had occurred in the southwest and central areas of site. The evaluation trenches also demonstrated that undisturbed soil horizons were present in the northwest area of the site. No archaeological features associated with earlier phases of activity were encountered on site. [Au(adp)]

Land at Norman Road (North), Belvedere, London Borough of Bexley An Archaeological Evaluation

Holden, S Brockley : Pre-Construct Archaeology Ltd., 2007, 132pp, figs, tabs, refs
 Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation was carried out at the site and consisted of nine trenches and revealed a general sequence of gravel, alluvial deposits, peat, alluvial clay and made ground. A continuous column sample was taken from each of the trenches, together with a bulk sample sequence from through the peat which is likely to be of Early-Neolithic to Iron Age date. No culturally sensitive features were encountered although a single rim sherd of Roman pottery was recovered. [Au(adp)]

Halsey, C London : Museum of London Archaeology Service, 2007, 53pp, figs, tabs, refs
 Work undertaken by: Museum of London Archaeology Service

A geoarchaeological evaluation was carried out at the site and consisted of the drilling 13 boreholes across the site. The deposits, which held potential for Roman archaeology, existed at c. 0.5m to 1m below present ground level while those horizon with prehistoric potential lay at more than 8m below ground level. In addition to the potential archaeology the deposits retained within the cores were significant enough to warrant further work. These deposits were likely to contain well preserved plant micro and macro fossils and invertebrate remains which can be utilised to reconstruct the changes in the past environment and the impact of human behaviour on the Thames floodplain from the end of the late Glacial period into historic times. Archaeological Evaluation Report

Vuolteenaho, J London : Museum of London Archaeology Service, 2007, 29pp, figs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological evaluation was carried out at the site and revealed that both deep and shallow archaeological features cutting into natural clay survived in the eastern part of the site. A substantial flat bottomed Roman ditch dated to AD 50-400, as well as a shallow post hole of unknown date, were recorded in Trench Three. Trench Two revealed no archaeological deposits or features. In the light of revised understanding of the archaeological potential of the site the report concluded that the impact of the proposed redevelopment was low to moderate. [Au(adp)]

Archaeological Evaluation Report

Anthony, S London : Museum of London Archaeology Service, 2007, 22pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological evaluation was carried out at the site and revealed alluvial deposits confirming the location of a historically mapped stream on or near to the site. Deposits of buried 20th century soils and landscaping features indicated only modern activity on the site, probably relating to the extension of property boundaries from the High Street to the east. The site has very limited archaeological potential and is of limited local significance in providing topographical information relating to an historic watercourse. [Au(adp)]

Hogan, S & Pole, C Hertford : Archaeological Solutions, 2007, 25pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological evaluation was carried out at the site. A desk-based assessment revealed that Mesolithic, Roman, medieval and post-medieval flint scatters were identified in the surrounding area. Evidence of settlement activity from any archaeological period was however, not represented in this part of the Cray Valley owing to poor survival. The archaeological evaluation comprised three trenches which revealed four modern features associated with the construction and subsequent demolition of the building that previously occupied the site, in Trenches 1 and 2. The previous demolition and site clearance activity in the eastern part of the site had also caused the truncation of the ground level to the natural sand and flint gravel layers. [Au(adp)]

Bellefield Road, Fordcroft, Orpington, London Borough of Bromley Archaeological Evaluation

Taylor, JBrockley : Pre-Construct Archaeology Ltd., 2007, 41pp, colour pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation was carried out at the site and revealed evidence for natural river gravels and brickearth sealed by as Pre-Roman/Roman colluvial layer. The colluvial layer was truncated by a tile and flint Roman foundation representing the back wall of the western room of the bathhouse. A north-south aligned ditch and a number of layers and/or pit fills of probable Roman date were also recorded. In addition two Saxon west to east aligned grave cuts, one of which was seen to contain an extended burial and a number of associated grave goods, truncated the earlier horizon at the eastern end of trench. The remainder of the trench was comprised of a post-Saxon colluvial layer, a number of late post-medieval cut features, an chalk layer representing late 19th/early 20th century precursor to Bellefield Road, 20th century service trenches and 20th century road surfaces. GUILDHALL OLD LIBRARY, BASINGHALL STREET
Guildhall Old Library, Basinghall Street, London EC2, City of London. An Archaeological Evaluation Report

Watson, B London : Museum of London Archaeology Service, 2007, 17pp, figs, tabs, refs
Work undertaken by: Museum of London Archaeology Service
 An archaeological evaluation was carried out at the site and revealed that the results of the field evaluation have helped to refine the initial assessment of the site. Within the area there were some 1.2m depth of foundations and makeup under the existing sub-basement floor associated with 1870-72 construction and later modifications. The test pit at the location of the lift pit indicated that the construction of the existing building had removed any potential of surviving deposits and features

within the footprint of the lift. There was limited survival of deep cut features such as pits, wells, foundations and natural stream channels to survive elsewhere beneath the basement depending on local truncation levels. In the light of revised understanding of the archaeological potential of the site the report concluded that the impact of the proposed works was very limited. [Au(adp)]

ST. BARTHOLOMEW'S HOSPITAL, CITY OF LONDON***St. Bartholomew's Hospital, London EC1, City of London. Supplementary Archaeological Evaluation Report***

North, CLondon : Museum of London Archaeology Service, 2007, 15pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

A supplementary evaluation was carried out for the site. Test pit 6b revealed archaeology at a higher level than initially expected in the south east corner of the site. No excavation of archaeological features took place only the exposure and recording. An auger survey was carried out revealing a fill or fills of cut features to at least 10.41m OD, initially interpreted as quarrying sealed by deposits suggesting ponded/marshy conditions. Although the deposits within this test pit could not initially be firmly associated with the medieval city ditch, the watching brief recently carried out in the adjacent area to the east allowed a reinterpretation and appeared to confirm the presence of the ditch in the south east corner of the site. Work undertaken by: Museum of London Archaeology Service

An archaeological evaluation of 5 test pits with further drilled core and window samples within the basements of numerous properties at the junction of Camomile Street with Bishopsgate was carried out. Natural gravel was encountered in several test pits at 11.8m OD to 12.1m OD beneath varying thickness of truncated brickearth, which survived to a maximum height of 12.96m OD. In most cases natural ground was truncated by Roman, medieval and post-medieval pits mainly for gravel and brickearth extraction and later backfilled with domestic refuse. Possible evidence of tanning industry was recorded within the centre of the site while a fragment of medieval-early post-medieval cellar survived at c.14.7m OD below present day Clerk's Place. Later post-medieval brick footings also survived across the site some may relate to known development of the site at this time. [Au(adp)]

LAND AT 39A SALEM PLACE, CROYDON***Land at 39A Salem Place, Croydon***

Thorne, A Portslade : Archaeology South-East, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was conducted on the site in advance of redevelopment. Three trenches were excavated and produced evidence of significant ground disturbance. A demolition layer up to 1.30m deep was thought to relate to the demolition of the Victorian properties prior to the construction of Salem Place. The depths of the deposits and the presence of a mid-19th century wall of a probable cellar indicated a significant level of ground truncation and suggested a low probability of survival of archaeological remains of the site. [Au(adp)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2007,

Work undertaken by: Wessex Archaeology

Wessex Archaeology carried out an evaluation in order to inform a planning condition associated with the redevelopment of the site for residential purposes. Eight trial pits were excavated, of which two contained features of archaeological interest: a shallow pit containing Late Bronze Age pottery, and an undated gully. A number of modern (post-1930s) and natural features were recorded in the remaining six trial pits. The site had been much truncated by landscaping and the construction of a swimming pool associated with Red Stacks, the house on the eastern part of the site. It is considered unlikely that any other significant archaeological remains survive. [OASIS(Au)]

SHOOTERS HILL, GREENWICH
Shooters Hill, Greenwich, London. Archaeological Evaluation and Assessment of Results
 Thompson, S Salisbury : Wessex Archaeology, 2008, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The aim of the evaluation was to locate and assess any evidence for the survival of World War II defences, and to link these into the wider context of the defence of Britain and the "Stop Lines", specifically, "Stop Line Central" which ran through the Shooters Hill area. A geophysical survey was used in an attempt to help locate the remains on Eaglesfield Park and Htham Common, but the results proved to be limited in usefulness due to high levels of disturbance, although some possible areas of archaeological activity were located. Most features found during the evaluation proved to be of World War II date, and all five sites proved to have evidence of activity at this time. These included standing structural remains in Oxleas Wood (a probable air raid shelter) and Eltham Common (a spigot mortar base). The remnants of a barrage balloon tether were uncovered at Eaglesfield Park, and a possible anti-aircraft gun emplacement at Oxleas Memorial Hospital. Modern disturbance was encountered on all sites, due to continuing development since the war. Of particular significance may be a possible British Auxiliary Unit operations base within a residential area at Ashridge Crescent, Eaglesfield. Also of great interest, however, was the discovery at Eaglesfield Park of a ditch containing large quantities of iron smelting slag, associated with Early Iron Age pottery, which was of high significance as a rare example of ironworking at this early date. 42A Medora Road, Romford, London Borough of Havering. An Archaeological Evaluation

King, G London : Compass Archaeology, 2007, A4 spiral bound Compass Archaeology in-house developer report.

Work undertaken by: Compass Archaeology

A Compass Archaeology evaluation took place on the 24th July 2007. The evaluation was carried out as a condition of planning consent, prior to redevelopment of the site. The area had the potential to contain archaeological features, in particular previous archaeological investigations just to the east of the site had revealed features and environmental remains of Late Bronze and Early Iron Age date. The evaluation revealed that the footprint of the proposed new build had been extensively truncated by large 20th century concrete foundations that criss-crossed the site. Five small evaluation trenches were investigated, but no archaeological finds or features were encountered. A clean alluvial and geological sequence was recorded across the site. The sequence was of a alluvial clay overlying a lens of gravel overlying a further thick clay deposit. No further archaeological work is required in consideration of this planning application. Savage, L Twickenham : AOC Archaeology Group, 2007, A4 text and illustrations report

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was undertaken by AOC Archaeology Group between 30th and 31st August 2007 at Roomes Stores, 51-53 Station Road, Upminster, London Borough of Havering. The aim of the evaluation was to assess the impact of the proposed development on any surviving archaeological remains. The evaluation comprised two machine excavated trenches measuring 15m x 1.80m, at base. Natural drift geology comprising undifferentiated head deposits of variable pebbly sandy clay were identified at between 23.10mOD and 25.73mOD. Sealing the head deposits in

Trenches 1 and 2 was several layers of 20th century made ground and demolition rubble. No archaeological remains or residual finds were identified in any of the trenches. [OASIS(Au)]

Hart, D Portslade : Archaeology South-East, 2007, 19pp, figs, refs

Work undertaken by: Archaeology South-East

A single test pit was excavated on the site. Potential alluvial deposits were encountered, sealed by a thick reclamation deposit from which two sherds of 18th-19th century pottery were recovered. These deposits were heavily truncated as a result of the insertion of a basement of 19th-20th century date and this structure was backfilled with loose demolition material. The instability of this demolition backfill prevented full excavation of the test pit to natural gravel and excavation ceased at c 0.60m AOD. [Au(adp)]

 Four trenches were excavated within the footprint of the development. A medieval 12th -13th century ditch and an undated, probably medieval ditch and posthole were recorded. These may pertain to similar features recorded at previous excavations in the area such as at Church Road Vicarage site. Additionally, the remains of a 19th century brick building were recorded.  An archaeological evaluation was carried out at the site. The northern part of the site produced evidence for two later 18th /early 19th century semi-detached cottages, which were shown on plans after 1847 and up to their destruction by wartime bombing. A series of brick wall bases related to a building some 9.2m by 7.5m in plan, with a further wall base marking the position of an outhouse. Photographic evidence showed that the main building was of two-storeys, and probably timber-framed and weatherboarded over brick footings with only the central wall and chimney bases carried up in brick. Within the central and southern parts of the site mid 20th century truncation had removed any evidence for historic structures. However, a small group of post-medieval pottery suggests some activity in the later 17th and early 18th centuries, with a typical mixture of utilitarian and fine wares.

There was no evidence for any earlier activity, and excavation generally exposed the natural River Terrace sandy silt/clay and gravel c. 700mm below modern ground level. [Au(adp)]

Eddisford, J Twickenham : AOC Archaeology, 2007, A4 report with Illustrations

Work undertaken by:

An archaeological evaluation and watching brief was undertaken by AOC Archaeology Group on the 14th May 2007 land to the rear of 2-16 High Street, Plaistow, London. The evaluation consisted of 2 machine excavated trenches measuring 1.50m wide and 15.00m long. Natural gravel was recorded in Trenches 1 and 2, sealed by post-medieval made ground and modern tarmac. Trench 1 was only partially excavated following removal of the tarmac due to asbestos contamination in this area of the site. No archaeological features were identified on the site. [OASIS(Au)]

The evaluation showed that the site had been situated on high and dry land, and demonstrated evidence for occupation from the Mesolithic to the Early Iron Age periods, represented by a flint assemblage and pits and post holes containing Bronze Age and Iron Age pottery. Alluvial clays of a possible post-Roman date sealed the prehistoric layers, and 19th century clay extraction pits truncated the site. [Au(adp)]

KEW GUILD STUDENT VEGETABLE PLOTS, ROYAL BOTANIC GARDENS KEW, RICHMOND*Kew Guild Student Vegetable Plots, Royal Botanic Gardens Kew, Richmond, TW9 3AG. London Borough of Richmond A Programme of archaeological Recording and Preservation in Situ*

Compass Archaeology London : Compass Archaeology, 2008, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Compass Archaeology

A programme of rescue archaeological recording and preservation in situ took place in October 2007 at the Kew Guild Student Vegetable Plots. Works began for the provision of sixteen additional planting

beds with associated clay paving access footpaths, bespoke fencing of heights suitable for public viewing, plant support systems for climbing plants and an equipment storage facility. This work was outside of the planning process and during the course of construction groundwork a series of large red brick structures were exposed. The archaeological work revealed the foundations of a complex rectangular red brick structure with internal divisions, which appears to be a large late 18th century greenhouse or 'forcing house'. A series of brick footings and internal walls and bases related to a building some 21.5m by 4.6m in plan, with a further wall marking an extension to the north. There was also fragmentary evidence suggesting a further large building existed to the north. The walls indicated at least two phases of construction, with the northern wall apparently being rebuilt or strengthened at a later stage, additionally areas of burnt residue possibly indicated the presence of a central heating source (stove or furnace) with a similar structure at the western end. The drainage regime was also indicated in the construction of the southern wall. There were very few datable finds from the cleaning exercise, with only a small group of post-medieval ceramics being a typical mixture of flowerpot materials and the occasional sherd of utilitarian coarse ware. One clay tobacco pipe tentatively dated to the 18th century was also found. Further analysis revealed that the greenhouse probably belonged to land originally in the ownership of the Earl of Essex (the Capel family) and was first shown on maps dating to 1771. The building does not appear on Rocque's map of 1746 and therefore a date to the middle of the 18th century seems most likely, which also makes this building contemporary with the nearby Georgian Grade II Listed School of Horticulture building. The early function of these two buildings was as part of the kitchen garden serving Kew Farm (the Capel's family home) and predating the inclusion of this land into the Royal Botanic Gardens. Later map evidence in 1840 indicates that the newly discovered building may have been a 'peach house' or 'vinery' and subsequent map evidence shows a potential second phase of construction of the building to the north. There was no evidence for any earlier activity, and clean natural deposits were not exposed. [Au]

Work undertaken by: Museum of London Archaeology Service

The evaluation found that the south of the site had been heavily truncated by Victorian cellars and modern piling with small islands of surviving Roman archaeology in the form of dump layers and pits. Towards the north of the site, a late Tudor to early Stuart timbered drain was excavated which showed evidence of silting up, and then a re-cut and renewal of the channel revetment using fragments of a

medieval clinker built ship before a deliberate backfill of domestic rubbish. Due to the commonplace nature of the remains, the impact of the development was thought to be low. [Au(adp)]

Land at 52 Weston Street, London SE1. An Archaeological Evaluation Report

Sygrave, J Portslade : Archaeology South-East, 2007, 22pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

In advance of redevelopment, one trench was excavated in the centre of the site. The eastern structural wall and rubble filled cellar of a 19th century building was recorded truncating a 17th to 18th century made ground deposit, which in turn sealed upper sequence of the underlying alluvial deposits. The alluvial deposits were dated to the 17th to 18th centuries and suggested that prior to the later post-medieval period the site was situated in marginal swampy ground. [Au(adp)]

WALWORTH ACADEMY, MINA ROAD

Walworth Academy, Mina Road, An Archaeological Evaluation Report

Capon, L Twickenham : AOC Archaeology Group, 2007, 12pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was undertaken between 29th October and 2nd November 2007 at Walworth Academy, London Borough of Southwark. The aim of the evaluation was to assess the impact of the proposed development on any surviving archaeological remains. Three trenches were excavated. Natural Shepperton gravels were identified at between -0.36mOD and -0.50mOD. Sealing the gravels in Trenches 1 and 2 was a layer of naturally deposited yellow sand and clay. In Trench 3 the gravels were sealed by a layer of naturally silted blue/grey silty clay contaminated with hydrocarbons. A similar deposit was observed in Trenches 1 and 2 sealing the yellow sand and clay layer although this appeared to have been redeposited rather than naturally silted. Deposits of 20th century made ground sealed these deposits. Overlying these was a bedding layer of crushed hardcore sealed by the present concrete slab. No archaeological remains or residual finds were identified in any of the trenches. Trenches were examined for palaeoenvironmental potential. However, no peat deposits were observed and the naturally deposited alluvial deposits were contaminated with hydrocarbons. The only features on the site relate to development since the 19th century, when Mina Road was established, typified by rows of terraced houses. One pit may be the ash-pit from one of these houses. The other features were structural, most likely relating to a 20th century group of buildings that were used as a tannery. No other significant archaeological remains or residual finds were present. LONDON ARENA, CROSSHARBOUR, ISLE OF DOGS***London Arena, Crossharbour. Final Archaeological Evaluation Report***

Capon, L & Melikian, M Twickenham : AOC Archaeology Group, 2007, A4 text and illustrations document

Work undertaken by: AOC Archaeology Group

A two-phase archaeological evaluation was undertaken at London Arena, Crossharbour, Isle of Dogs. The aim of the evaluation was to assess the impact of the proposed development on any surviving archaeological remains. Environmental and topographical evidence dominated the results. The first phase of work evaluated the upper stratigraphy of the site, to a depth of over 3m, to around 0.50m OD. This was undertaken in August 2006. The second phase of evaluation examined the lower deposits, to a depth of -1.75mOD, and followed reduction of the upper levels. This was conducted over several months from January to May, 2007. The earliest deposits encountered were river terrace deposits sealed by grey/blue alluvial deposits to a level of -1.50m with an intermittent layer of peat sealing it, containing moderately well-preserved timbers of possible Bronze Age date. None of the timbers showed evidence of being worked, and are most likely the remains of trees. Alluvial deposits characterised the stratigraphy to a height of +1.60m OD, above which modern disturbances and evidence of redeposition were present. Inclusions of building material and peat lenses indicated that these were redeposited alluvial deposits, probably from excavations to the west of the site for Millwall Inner Dock. The uppermost layers are made ground forming the bedding layer for the present concrete slab. [OASIS(Au)]

UNION WHARF, ORCHARD PLACE, LEAMOUTH E14, LONDON BOROUGH OF TOWER HAMLETS***Union Wharf, Orchard Place, Leamouth E14, London Borough of Tower Hamlets Report on Archaeological Evaluation***

Barton, C Salisbury : Wessex Archaeology, 2007, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation was undertaken in support of a planning application for the redevelopment of the site. The application, if approved, would result in the partial demolition of a buried listed dock on the site. The evaluation was carried out to provide evidence that the buried dock was not, as was listed, an ashlar lined structure built in the 1860s, but a reinforced concrete structure recorded as being built in 1948-49. The evaluation duly provided this evidence, and demonstrated that none of the original structure survived. [Au(abr)]

4 Mastmaker Road, Isle of Dogs, London Borough of Tower Hamlets. An Archaeological Evaluation Report
 Edwards, C Twickenham : AOC Archaeology Group, 2007, A4 size 31 pages (8 figures)
 Work undertaken by: AOC Archaeology Group
 An archaeological evaluation was undertaken at 4 Maskmaker Road, Isle of Dogs. An initial phase of geotechnical test pits was carried out to determine to stratigraphy on the site and assess the level of truncation. The test pits revealed alluvial layers overlying terrace gravels. One test pit indicated the presence of an organic peat deposit. A second phase of site work was conducted on site in the form of two archaeological trenches which were located in the area of two of the previous test pits. The trenches provided a cross section through the stratigraphy on site allowing for detailed recording and sampling of the deposits. [OASIS(Au)]

Hart, D Portslade : Archaeology South-East, 2007, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was carried out in advance of proposed redevelopment of the site. A single stepped trench was excavated and revealed natural sand, sealed by a sequence of sub and top soil. Finds recovered from the topsoil horizon indicate a 17th century date. A 19th to early 20th century cellar associated with a building fronting Felsham Road was encountered at the southern end of the trench and a brick soakaway was observed to the south. Presumably within the back plot associated with such building. A further cellar located towards the southern end of the trench represented the remains of a building shown on Ordnance Survey Maps of 1939 and 1952. The entire sequence was capped with a concrete slab to c. 9.14m AOD. [Au(adp)]

Cummings, R London : Compass Archaeology, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Compass Archaeology

An archaeological evaluation was carried out at the site and did not reveal any significant remains although they did provide evidence of mid 19th century occupation. This represented the 19th century houses present on the site and associated features, later demolished in the 1960s. A brick-built domed well and a brick-lined cess pit along with the backfilled basement and partially surviving wall of the 19th century house were recorded. No pottery or other finds were recorded. Elsewhere the evaluation trenches revealed later disturbance of the 20th century date, notably demolition of the 19th century buildings and later ground makeup. There were no soil horizons or earlier cut features. [Au(adp)]

ST MARTIN-IN-THE-FIELDS CHURCH, TRAFALGAR SQUARE*Miscellany, Medieval Britain and Ireland-Fieldwork Highlights in 2007, Greater London. Further Discoveries in Lundenwic*

Telfer, A London : Maney Publishings, 2008, 5pp, pls, figs, refs

Work undertaken by: Museum of London Archaeology Service

Fieldwork in 2007 consisted of a final phase of excavation in Area 7, located to the north of the National Schools building, in the NE corner of the site (Fig 3). A simultaneous watching brief was undertaken in Area 8, within the east basement of the building. The excavation in Area 7 revealed the earliest activity recorded at the site, dating from the time of the Roman conquest, in the form of a building or structure at the east end of the area. Here, features were sealed by a general homogenous layer, which dated from the second half of the 4th century. At the west end of Area 7 three phases of possible Roman activity were recorded, with the earliest represented by a burial. Sealing the grave was a brickearth surface, which showed signs of weathering and evidence for roots, suggesting that the surface had been abandoned for a while, or at least been open to the elements. The surface had been truncated by a group of stake holes and post holes, thought to be associated with the superstructure of a later mud-brick oven. The oven represented the latest phase of Roman activity in this part of the area. Several deposits of debris from its use were recorded but, at this stage of the analysis, there was no information about its product. [Sec]

Work undertaken by: Northern Archaeological Associates

The areas excavated revealed a spread of archaeology over the whole site that extended beyond the limits of excavation in all directions. Initial pottery identification suggested a potential Roman date for all areas of the site, with the possibility of an Iron Age phase. The major focus of activity appeared to be in Area C with the presence of a structure relating to agricultural activity, possibly the processing of corn. Enclosures existed to the north and south. Quenching troughs and corn-drying kilns revealed still more evidence for industrial activity. The presence of a copper alloy plate and a number of fragments of tubuli suggested that there may have been a building of high status within the area, but no further evidence for this was found. Middleton, P Barnard Castle : Archaeo-Environment Ltd, 2007, 71pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeo-Environment Ltd

The evaluation at Finchale provided evidence of two separate phases of occupation. The earliest and most significant of these probably dated to the original layout of the Benedictine monastery in the early to mid 13th century. An east to west stone wall of mortared construction was identified in Trench 1, dated by associated pottery to this first phase of the priory's development, and believed to be part of the outer precinct wall. The second phase was much later, probably dating to the 18th or 19th century. In Trench Two, a section of drystone wall was found associated with a field enclosure. [Au(abr)]

THRISLINGTON QUARRY**Thrislington Quarry Eastern Extension. Archaeological Evaluation**

Claydon, M Durham : University of Durham, Archaeological Services, 2007, Grey found covered A4 report

Work undertaken by: University of Durham, Archaeological Services

An Archaeological evaluation was conducted in advance of a proposed development. Part of a ring gully was uncovered, which related to a prehistoric structure. A gap in the ditch suggested an entrance on the east side. A further possible ring-ditch was uncovered, which was associated with narrow curvilinear gullies. Other features include pits, gullies and medieval plough furrows. [OASIS(Au)]

BRAKES FARM, SEDGEFIELD**Archaeological Evaluation Report. Brakes Farm, Sedgefield, County Durham**

Teasdale, A Barnard Castle : Northern Archaeological Associates, 2007, 35pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

A total of 39 trenches were excavated, and demonstrated a good correlation between the features recorded and those identified by geophysical survey. Only two trenches contained features considered to be of possible prehistoric or Roman date, both situated in the field to the southeast of Brakes farmhouse. In the south-east corner of the arable field, to the east of the farmhouse, two ditches were recorded, possibly associated with enclosure and round house crop-marks to the south of the A689, thought to be of Iron Age or Roman date. A large 18th/19th century pit, probably resulting from gravel extraction, was also recorded. Two localised areas of further archaeological investigation were proposed. [Au(adp)]

LAND EAST OF BARRATT WAY, WEST CORNFORTH**Land East of Barratt Way, West Cornforth, County Durham. Archaeological Evaluation**

Telford, A Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 17pp, figs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

The results of the evaluation were largely negative. A number of features recorded in the trenches closest to the proximity to the village of Cornforth were interpreted as being of probable natural origin, due to irregularity in form and the archaeologically sterile nature of the fills. No evidence for occupation associated with the backlots of the properties fronting onto Cornforth village green was recorded. A lack of evidence relating to agriculture, such as the existence of remains of ridge and furrow, suggested that the land may have been rough pastureland in the medieval period. [Au(abr)]

BUTTERWICK MOOR WIND FARM, SEDGFIELD

Butterwick Moor Wind Farm, Sedgfield, County Durham. Archaeological Evaluation

Platell, A Durham : University of Durham, Archaeological Services, 2007, 18pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

The geophysical and trial trenching evidence demonstrated that a significant Romano-British archaeological site was present at the proposed location of Turbine 10. The density of features, the artefactual and ecofactual evidence indicate that it was a settlement, and it was likely to spread over an area wider than that covered by the geophysical survey. Two small, shallow gullies, heavily truncated by ploughing, were identified in Trench 1, to the west of Butterwick West Farm. These were undated but may have been associated with the former medieval village of Butterwick. It was possible that other similar features existed in this area, although they were likely to be similarly truncated. Investigation of several geophysical anomalies by trial trenching did not demonstrate the presence of archaeological features elsewhere. The remains of ridge and furrow were present in several places across the development area. No other features of archaeological significance were identified elsewhere by the evaluation. [Au(abr)]

"THE CASTLES", WEST SHIPLEY FARM, HAMSTERLEY***"The Castles", West Shipley Farm, Hamsterley, Co. Durham. Archaeological Evaluation and Assessment of Results***

McKinley, J I Salisbury : Wessex Archaeology, 2008, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

"The Castles" comprised a large, rhomboidal dry-stone monument with a single entrance to the east and a substantial ditch which appeared to surround the monument on all sides. The monument was first recorded in late the 18

th

century and subto series of investigations by Hodgkin in the early 20

th

century, including, at times, extensive rebuilding of parts of the walls. No evidence for internal structures or dating had been found, but the monument was believed to represent the remains of a fortified site of Late Iron-Age, Romano-British or post-Roman date. The geophysical survey revealed few features within the interior other than north-south ridge and furrow across most of the area, confirming evidence from aerial photographs and written sources for post-medieval cultivation. Potential archaeological anomalies within the interior proved to be mostly natural in origin, with one anomaly in the south corresponding with an area of flagged flooring. Further ridge and furrow was observed in a survey area to the north of the monument, and 19th

century field boundaries in an area to the east. Investigation of the walls showed a vertical dry-stone rubble construction built directly on the purposely levelled old ground surface or natural. The single eastern entrance probably originally had a cobbled surface, later flagged. A large upright flag placed in the wall on the north side of the entrance (no surviving evidence for pair to the south) may have formed part of a gateway. The "guard cell" within the wall on the south side of the entrance had no pair to the north, and was probably a later addition inserted after almost total collapse of the wall. Evidence for only two internal archaeological features was recovered. In the southern part of the enclosure an area of rough stone flagging, probably some sort of yard, was likely to have been contemporaneous with the monument. An east-west rubble-filled linear feature in the central area of the enclosure was probably associated with terracing and drainage, the date uncertain. No artefactual dating evidence was recovered from the site and the palaeoenvironmental data was very sparse and was undated. The monument remained enigmatic both in terms of date and function. Though clearly constructed by a substantial work force as a defensive fortification, there was little evidence to support by whom and for what it was used. It may have served as a demonstration of power, its use may have proved unnecessary by change of circumstances, or occupation may only have been temporary or seasonal. The date of the original construction seemed most likely to be Late Iron Age, with possibly post-Roman reuse of parts of the structure. [Au(abr)]

BINCHESTER ROMAN FORT

Binchester Roman Fort, County Durham. Archaeological Evaluation and Assessment of Results

Birbeck, V Salisbury : Wessex Archaeology, 2008, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

Binchester fort was one of a number of military complexes built as part of Governor Agricola's push into Scotland in the late 1

st

century AD, and later consolidated to support the defences at Hadrian's Wall. The fort was built to guard the point where

Dere Street

crossed the River Wear and was first constructed in timber around AD80, to be replaced by a larger stone fort in the early 2

nd

century Only the excavated buildings and the earthwork remains of the north-eastern ramparts survived above ground. Archaeological excavation has shown what happened to the fort after it was abandoned by the Romans around AD410. The project aims were to carry out a limited programme of non-intrusive investigations and intrusive evaluation over three days. Part of the site under investigation was a Scheduled Monument (Number DU23) of national importance. The remainder had the potential to contain deposits of local, regional and national importance with the ability to answer regional and national research questions about the various periods already known to be represented on this site. The gradiometer results of the geophysical survey complemented the earlier geophysical survey carried out by Geoquest and provide further information on the layout of the

vicus

(including evidence for a large associated boundary ditch). Earlier fort ditches were also mapped along with the course of

Dere Street

to the west of the fort and a further Roman road heading north-east out of the fort. Perhaps one of the most interesting finds was a series of mausolea that appeared in the magnetic results but more clearly in the ground penetrating radar data, which identified entranceways and internal features. Possible industrial activity was noted outside the north-eastern entrance of the fort. The results clearly demonstrated the potential that geophysics, and in particular ground penetrating radar, had for providing detailed information about the fort and environs at Binchester. Three machine trenches were excavated, one within the Scheduled Monument to examine the

vicus

(civilian settlement) and antiquarian excavations, one to examine large rectilinear features identified by geophysical survey and aerial photography, thought to represent the defences of an early timber fort, and one to examine the mausolea identified by geophysical survey. It appeared, from the single trench excavated in the Scheduled area, that the antiquarian excavations in the

vicus

area comprised linear trenches that followed the lines of the masonry walls. Comparison of the antiquarian records of the masonry remains with those exposed during this project indicated that, in all probability, the masonry remains exposed by the antiquarian excavations were subsequently removed for use elsewhere. Although this had clearly severely damaged, or even completely removed, the walls, it was also clear that internal and external features and deposits would survive between the antiquarian trenches. As no excavation of

in situ

Romano-British deposits was undertaken and the vast majority of the finds recovered from this trench were from the backfill of an antiquarian trench and the topsoil, the date of the construction, occupation and abandonment of the building was unknown, although a 2

nd

to 4

th

date was likely. A series of cuts and deposits in the north of the site were thought to represent a series of fort defences. The third trench was excavated to examine possible masonry features identified by geophysical survey. These proved to be a row of three masonry structures, probably mausolea, two enclosed within a boundary or "precinct" wall. The association of these three structures with the remains of an inhumation burial, in the south-eastern structure, and disarticulated human remains, in the central structure, indicated a funerary function and their form suggested that they were mausolea. Apart from the excavation of the remains of one inhumation burial within the eastern mausoleum and a small sondage to examine the deposits around the central mausoleum, excavation was limited to exposing and cleaning the remains, which were then preserved in situ. Platell, A Durham : University of Durham, Archaeological Services, 2007, 14pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

Ridge and furrow at 5m spacing survived as a degraded earthwork to the northwest of Old White Lea Farm. This was underlain by a ploughed out earlier phase of ridge and furrow at 9m spacing. The foundation for a wagonway survived to the north of Old White Lea Farm. Excavation proved this to be a substantial structure, c.2m deep. An undated field boundary ditch was sampled in Trench Nine. Shallow gullies in this area proved to be of recent origin and were probably wheel ruts from the movement of agricultural machinery. A shallow undated gully and an area of backfilled coal mining waste were identified in Trench Four. No other archaeological remains were identified. [Au(abr)]

Work undertaken by: Northern Archaeological Associates

A total of five evaluation trenches were excavated in order to evaluate earthworks recorded in a previous topographic survey. These included ridge and furrow cultivation, linear depressions, earthen mounds and a terraced channel. Four of the five trial trenches contained features, the remains of two post-medieval agricultural buildings, two plough furrows, a palaeochannel and a terraced channel that may have resulted from quarrying. A ploughsoil layer was observed in two of the trenches. All of the artefactual material came from subsoil or topsoil layers and was entirely medieval in date. It was thought unlikely that previously unrecorded archaeological remains existed within the development area. [Au(adp)]

Telford, A Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 35pp, colour pls, figs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An evaluation was undertaken and the earliest evidence for activity on the site dated to the 17th century although this did not comprise structural evidence. Earlier deposits comprised substantial amounts of dumped ships' ballasts. It was possible that earlier archaeological remains survived beneath the ballast. Well preserved structural remains of the corn mill were recorded in the south-western part of the site including the remains of a possible fly wheel pit associated with the engine that powered the mill although further to the east the structure of the early mill building had been heavily disturbed by later developments to the building on site. In the northern part of the site structural remains relating to early buildings probably associated with the Ouseburn Bridge Pottery established by Robert Maling in 1815 were recorded. [Au(adp)]

Muncaster, W Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 217pp, colour pls, figs, tabs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An archaeological excavation was carried out at the site and a number of features were recorded. The earliest phase of activity was represented by a pit alignment that extended across the length of the site heading towards Prestwick Carr which lay to the south of the site. Scientific dating suggested that the feature remained open for a long time from the late Bronze Age or Early Iron Age up to the Romano-British period. There was a break in occupation until an enclosure or boundary ditch was dug dating to the 10th century. The main period of activity occurred when the landscape was dramatically reorganised with the creation of a monastic farm or grange owed by the Cistercian Abbey of Newminster. Two of the enclosures contained evidence of occupation with remains possibly associated with the systematic processing of hemp. [Au(adp)]

THE FORMER PARCELS OFFICE, WESTGATE ROAD***Archaeological Evaluation at the Former Parcels Office, Westgate Road, Newcastle-upon-Tyne***

Town, M Alston : North Pennines Archaeology Ltd., 2007, 48pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An evaluation was carried out on the site and a building recording of the parcels office and associated railway arches. Trench One was located in what originally was a covered walkway adjacent to the Talbot Inn and therefore may have had undisturbed archaeological deposits beneath. Trench Two was placed within the footprint of the building in order to gain dating evidence. Both trenches encountered large quantities of rubble indicating extensive cellars, though Trench One did identify several undated cellar walls, some of which were made from sandstone. These trenches could not be fully recorded, due to their dangerous unstable state. Trench Four, which was located over the original position of the Westgate Road prior to the alteration of its alignment, uncovered sets for the road, lying underneath the demolition rubble of the former housing. The presence of Roman and medieval archaeology on the site was significant and any disturbance should be mitigated against, either through preservation in situ or through excavation. The remnants of buildings and road surfaces represented a rare preservation of an early post-medieval streetscape which should also be examined should the site be excavated. [Au(adp)]

MASSEY'S FORGE***Blaydon Burn Festival Report on the Archaeological Investigation at Massey's Forge, 9th June 2007***

Northern Counties Archaeological Services Durham : Northern Counties Archaeological Services, 2007, 12pp, colour pls, figs, refs

Work undertaken by: Northern Counties Archaeological Services

An archaeological investigation was carried out at the site of an 18th water corn mill known as Massey's Forge. The work was undertaken as part of the Bygone Blaydon Burn Event as part of a wider Springwatch Festival in order to raise awareness of local history. Three small trenches were excavated and parts of the mill walls and the floor were exposed; compared with extant records from 1982 and some additional recording was undertaken. A quantity of finds were recovered from the backfill of the 1982 excavation, including glass and ceramic beer bottles, marked fire bricks and industrial waste. [Au(adp)]

IRON SIGN FARM

Archaeological Evaluation at Iron Sign Farm, Northumberland

Amat, D & Carey, C Bakewell : Archaeological Research Services, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Research Services

An evaluation was carried out on the proposed route of a telecommunications cable, that was to cross the Scheduled Ancient Monument of Hadrian's Wall, the Hadrian's Wall Vallum and the Roman Military Way, at approximate right-angles. Neither the fabric of Hadrian's Wall nor the vallum was identified during the evaluation. The original road surface had been heavily truncated and redeposited, and it was likely that this process had destroyed any archaeology. It was thought that parts of Hadrian's Wall had been reused as later walls and made ground. [Au(adp)]

FOUNDRY LANE, BYKER***Foundry Lane, Byker, Newcastle-upon-Tyne. Archaeological Evaluation***

Bartlett, A Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An evaluation was carried out on the site in order to assess the presence or absence of Hadrian's Wall. No deposits associated with Hadrian's Wall were identified during the evaluation. In Trenches 1 and 3,

river flood deposits of uncertain date were located at depths of 1.6mbgl/3.05m AOD and 3mbgl/159m AOD respectively. In Trenches 2 and 3 structural elements comprising a wall, floor and flue were located belonging to a lead works depicted on the 2nd Edition OS Map. It was concluded that to minimise the risk of encountering Hadrian's Wall deposits, the depth should be reduced for the sewer to be inserted. The industrial remains encountered in Trench Three, were of local interest and a watching brief should be maintained throughout groundwork to ensure that a record is made. [Au(abr)]

Work undertaken by: Pre-Construct Archaeology Ltd.

The evaluation revealed the presence of important archaeological remains across the site for the earliest deposits associated with the Roman vicus settlement. Deeply stratified remains of Roman and medieval date encountered in the central and western part of the site, directly below the existing concrete surface. Roman remains included flagstone and cobble surfaces, walls, pits and a possible cremation burial. Dating evidence indicated mostly 2nd-3rd C activity. Medieval remains included developed soils and pits. Structural remains of the late 18th or 19th century origin recorded in the eastern part of the site

probably represented buildings demolished ahead of the construction of the railway viaduct in the mid 19th century. [Au(adp)]

SOUTH SHIELDS VICUS***South Shields Vicus Excavation - Fifth Draft Report (December 07)***

Tyne & Wears Museum Archaeology Department Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 40pp, figs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

An archaeological excavation was carried out at the site and revealed Roman deposits lying beneath the modern ground surface. The latest Roman layers were covered by 30 cm of medieval ploughsoil, above this the modern overburden was 1.20m, or more, deep, typically consisting of post-medieval agricultural soil, ballast, foundry waste and building rubble. The depth of overburden meant that the Roman levels were remarkably well preserved. It was thought likely that the entire plan of the Vicus was likely to be substantially preserved beneath the modern housing. [Au(abr)]

WHITBURN COE SECONDARY SCHOOL, NICHOLAS AVENUE, WHITBURN, SOUTH TYNESIDE***An Archaeological Evaluation At Whitburn C. of E. Secondary School, Nicholas Avenue, Whitburn, South Tyneside, Tyne and Wear***

Goode, A Durham : Pre-Construct Archaeology Ltd., 2007, 45pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation was carried out and comprised of geophysical survey of the eastern playing fields followed by the investigation of seven trial trenches. Five trenches were sited on the playing field two specifically located to test a geophysical anomaly possibly indicative of a curvilinear archaeological feature, with the remaining two sited on open ground to the north of the school. The specific aims of the evaluation were to determine the extent nature and degree of preservation of any archaeological remains at the site. Trenches 1-5 recorded nine shallow east west orientated plough furrows of probable post-medieval origin. Trenches 3 and 4 sited to test for the geophysical anomaly did not record any archaeological features to account for the anomaly, which was probably the result of a variation in the underlying geology. In summary no archaeological remains of significance were recorded in trenches 1-5. Trenches 6 and 7 exposed levelling deposits probably from demolition of former residential housing. [Au(adp)]

LAND AT 24 ALPINE WAY, SUNDERLAND***Archaeological Evaluation on Land at 24 Alpine Way, Sunderland, Tyne and Wear***

Gaskell, N Alston : North Pennines Archaeology Ltd., 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

The results of the evaluation revealed apparently well-preserved deposits of archaeological interest relating to the Bronze Age and Iron Age periods. Within Trench 1 four features were investigated and recorded, the most northerly (and lowest down the hill slope) being a 3m wide and up to 1m deep ditch containing Iron Age pottery, a flint piece and animal bone, some of which was burnt. South of this, and upslope, was a stone bank, constructed out of limestone, which is the local substrate, measuring up to 0.80m in height. Further south was a narrower ditch, running in a WNW-ESE direction through the trench. This too contained animal bone and Late Bronze Age pottery. The most southerly feature in Trench 1 was a semi-circular, stone filled feature, possibly being a ring cairn burial monument. From this a flint nodule was recovered, that had been struck, proving the constructed nature of the feature. This feature extended under the south-eastern trench edge, so its full diameter was not ascertained. Within Trench 2 two features were evaluated, the most northern feature appeared to be a continuation of the ditch seen in Trench 1 and from this feature a piece of Iron Age pottery was recovered and what appeared to be a flint blade tip. The stone bank seen in Trench 1 also continued into Trench 2, although this had no associated features or artefacts with it. Within Trench 3 no features of archaeological interest were recorded; the trench was not positioned over any putative features highlighted in the 2001 geophysical survey by ASUD and so proved to be a 'control' trench, highlighting the natural stratigraphy of the area. Layers and features of archaeological interest were found in two of the three trenches, in a good state of preservation. The date range returned for the sherds of pottery recovered was worthy of note, extending from the Late Bronze Age into the Iron Age, exceeding expectations. The variability of these pieces helps to plot the evolution and continued usage of the site in the later prehistoric period. The present scheme of works has proved sufficient to be able to date the layers and to explain the features satisfactorily. The proliferation of other sites used in a similar manner to Humbleton Hill within a 10km radius mean that this site is part of a wider network across the region and so should not be viewed in isolation. THE FRIARAGE MANOR HOUSE, FRIAR STREET, HARTLEPOOL

The Friarage Manor House, Friar Street, Hartlepool. Archaeological Evaluation

Platell, A Durham : University of Durham, Archaeological Services, 2007, 43pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

Significant archaeological remains were identified in all six trenches and the entire site was regarded as being of high archaeological potential. Undisturbed medieval ploughsoil was present in the southern half of Trench A, and several walls overlay this. Most of these related to various phases of construction of the Manor House although it was not possible to directly identify which phase individual walls

belonged to. The earliest wall appeared to be on a slightly different orientation to the later ones (although only a short length was exposed), and this may have been an indication of an unrelated earlier building, possibly part of the original friary. Medieval deposits had been truncated from the northern half of the trench by a large cut that extended beyond the limits of the trench. Laminated mortar and gravel deposits, that may have been various floor surfaces, filled this cut and were themselves truncated by a modern cellar. Unfortunately no dateable material was recovered from any of these deposits, so their exact date was unknown. However stratigraphically they did post-date the medieval remains present in the south of the trench so they were likely to relate to the post-medieval manor house. In Trench B a great thickness of modern soil was present, together with numerous pits containing mortar and building rubble. These pits were likely to be the result of burial of construction waste from the various phases of rebuilding of the post-medieval building. They had truncated, but not completely removed, earlier remains in this area, as could be seen from a fragment of clay-bonded wall surviving between the various pit cuts. This wall overlay a very large earlier pit that could not be properly excavated due to its depth of burial. Medieval artefacts, and no later material, were recovered from this wall and pit. Trenches C and D identified robbed-out walls, floors and a possible cellar. Medieval finds, including building materials indicative of a high-status structure, were found associated with these remains. The buildings in this area were almost certainly part of the cloister of the medieval friary. Trenches E and F identified a number of pits and ditches containing medieval pottery that were cut into a general layer of wind-blown sand that covered this whole area. This wind-blown sand had not been dated but, based on analogy with other areas on the Headland, may have been of 10th-century date. Only a limited area of it was removed, and ephemeral features were present below the sand. These were undated and may have been prehistoric or Saxon in date. In light of the importance of the site, it was likely that the planning authority would place an archaeological condition on any consent granted, stipulating full excavation of archaeological remains from any areas where they could not be preserved by sympathetic foundation design. LAND WEST OF TOWNFOOT STEADINGS, LESBURY

Land west of Townfoot Steadings, Lesbury, Northumberland. Geophysical Survey and Archaeological Evaluation

Elliott, L & Claydon, M Durham : University of Durham, Archaeological Services, 2007, 32pp, colour pls, figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

The geophysical survey revealed intense dipolar magnetic anomalies across a large part of the survey area. These anomalies were partly a result of the near-surface ferrous litter noted on site and also partly due to the presence of igneous dolerite stones that were scattered across the survey area. Although there was a concentration of dipolar magnetic anomalies, linear trends could be identified aligned northeast to south-west and north-west to south-east. Some of these almost certainly reflected wall-footings as shown on the 1844 tithe plan and 1867 O.S. first edition map. An area of smooth data in the east of the area appeared to correspond to a courtyard shown on these maps. The evaluation showed that large parts of the proposed development area had been heavily truncated in recent years. Trenches 3, 4, 5 and 8 were affected, resulting in the removal of any potential archaeological deposits or features. This truncation may have been caused by the removal of demolition material and foundations from buildings existing in the mid 19th century, groundwork during construction of the adjacent housing development or the recent construction of a culvert over a stream that lay immediately to the north of the site. Significant disturbance was evident in the topography across the south part of the site. A shallow gully with a series of probable stake holes was recorded in trench 1. This may have been a fence line associated with a medieval toft or farmstead. In Trenches 1 and 2 walls of probable 19th century date were recorded. The geophysical survey showed the southernmost wall related to an additional wall recorded in Trench Three. These walls are probably part of a post-medieval building shown on Lesbury tithe plan of 1844, or possibly the Alnwick Survey of 1622. A stone culvert which may have been medieval in date was uncovered in Trench Six. The culvert had silted up and was no longer functional. A shallow furrow-like ditch of possible medieval date was uncovered in Trench Seven. The ditch did not follow the same alignment of extant ridge and furrow evident in the north of the field. Trenches 3, 4, 5 and 8 had been rendered archaeologically sterile due to modern disturbance. The results of the geophysical survey supported this view. It was recommended that no further work was required in these areas. Features and deposits of archaeological significance were uncovered in Trenches 1, 2, 6 and 7. Further archaeological deposits had the potential to survive in the northeast and south-west parts of the site. [Au(abr)]

Muncaster, W Newcastle-upon-Tyne : Tyne & Wears Museum Archaeology Department, 2007, 54pp, colour pls, figs, tabs, refs

Work undertaken by: Tyne & Wears Museum Archaeology Department

33 trenches were excavated at the site. A number of ditches and boundaries were identified, and were likely to represent a multi-phases prehistoric settlement. One Iron Age pot sherd was recovered from a gully. Features at the site were thought to represent two enclosures, displaying different phases of occupation. A pit was identified containing burnt stones, probably "pot boilers" for cooking. Heavy truncation meant that only cut features survived, no floor surfaces or remains of round houses, which may have been expected if preservation on the site had been better. An open area excavation of 2.82 hectares was proposed in order to further investigate the remains, as well as monitoring of the rest of the application area through the development process. Platell, A Durham : University of Durham, Archaeological Services, 2007, 35pp, colour pls,

figs, tabs, refs, CD

Work undertaken by: University of Durham, Archaeological Services

Medieval wall foundations relating to the nearby Priory buildings were identified at depth in Trench 1. A rough stone foundation for the later terrace, with a ditch to its north, overlay these medieval remains. In Trench Two, the Monk's Walk, consisting of a path surface made from jet shale, was found at shallow depth. Pits had been cut through the shale surface for the planting of the lime avenues that flanked the path, proving that these trees were a later feature. A great thickness of soil underlay the path with various deposits beneath it that could not be investigated. In Trench Three, a number of large pits were identified at depth. They may have related to an industrial process involving the preparation and use of clay and were possibly medieval in date, although this date was insecure. A considerable thickness of soil overlay them. No evidence was found for the cross-paths depicted on a map of 1773. [Au(abr)]

PINCHINTHORPE HALL, GUIBOROUGH*Archaeological Evaluation, Pinchinthorpe Hall, Guisborough*

Grahame, R Hartlepool : Tees Archaeology, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Tees Archaeology

An archaeological evaluation was carried out and revealed that the site lay to the north-east of Pinchinthorpe Hall, a 17th century house within a medieval moated enclosure. The site lay within the

moated enclosure on its north-eastern side. The earthwork remains of a deserted medieval village and ridge and furrow lie to the north and west. Pinchinthorpe Hall was later a country house hotel and the proposed development involved an extension of the hotel accommodation. The archaeological evaluation comprised the investigation of two trenches, both of which exposed ditches dating to the medieval period sealed by a buried soil. A small assemblage of early medieval pottery was recovered. [Au(adp)]

THE GROVES AND SOUTERS LANE, CHESTER***Proposed Redevelopment at the Junction of The Groves and Souters Lane, Chester. An Archaeological Evaluation***

Dodd, L J Flintshire : Earthworks Archaeological Services, 2007, 29pp, colour pls, figs, tabs, refs

Work undertaken by: Earthworks Archaeological Services

Five evaluation trenches were excavated. The results produced clear evidence for Roman period activities across much of the site, together with the complex remains of successive (probably) Roman structures on the west side of Souters Lane. A rock-cut feature, probably a drain and potentially of Roman origin, was also recorded. Soil layers and rubbish disposal pits, rich in finds and dating to the late medieval and earlier post-medieval periods, were identified over the southern area of the proposed development site. These overlay and cut into the underlying Roman quarry deposits. [Au(adp)]

UNION STREET, CHESTER***Archaeological Evaluation Report for Land at Union Street, Chester***

Poole, B Chester : L-P: Archaeology, 2007, 39pp, pls, figs, refs

Work undertaken by: L-P: Archaeology

The investigations revealed that a demolition layer from buildings previously occupying the site had been compacted to act as the base of a concrete slab on the site. To the centre of the site, evidence of an 18th century tanning pit was identified, containing small fragments of oak bark. To the north of the site a series of Roman ditch fills were identified which extended beyond the scope of the trench. Several fragments of Samian ware and orange ware dating to the 1st and 3rd centuries AD were recovered from the Roman deposits on the site. It was thought that the Roman ditch was an extension of a ditch identified to the south of the site during previous work in the area. [Au(abr)]

STORMY POINT, ALDERLEY EDGE

Stormy Point, Alderley Edge, Cheshire, An Archaeological Evaluation

Mottershead, G & Wright J Manchester : University of Manchester Archaeological Unit, 2007, 137pp, colour pls, figs, tabs, refs

Work undertaken by: University of Manchester Archaeological Unit

The work comprised topographic, geophysical and XRF survey and the excavation of ten hand dug test pits followed by environmental analysis and AMS dating. The evaluation revealed that archaeological deposits survived across the whole of the Stormy Point site including a Bronze Age prospection pit, a second prehistoric possible prospection pit, at least one previously unknown prehistoric mine working with a collapsed ceiling, a possible prehistoric smelting bowl and another prehistoric pit probably associated with ore processing. Evidence was found of intermittent periodic ore processing and dumping with a date range from the Earlier Bronze Age to the Medieval period. Quarrying activity could be dated from the Medieval period to the Mid 17th century and traces of evidence for possible Romano-British or Medieval iron smithing were recovered along with evidence for Medieval activity close by, probably at Saddlebole. Archaeological Evaluation on Land at Pottery Park, Dearham, Cumbria

Town, M Alston : North Pennines Archaeology Ltd., 2007, 92pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

The evaluation identified remains dating to the early 19th century. Large quantities of earthenware pottery were uncovered, particularly in the northern corner of the field where the midden or rubbish tip was identified, almost entirely made up of dumped pottery sherds. The midden effectively lay in the back yard of the pottery and yard surfaces made up of crushed ceramic waste were also found adjacent. Remnants of the pottery buildings themselves were also uncovered. Saggars, ceramic boxes used for protecting the pots as they were fired, were found across the site and also built into the walls as a useful building material. No evidence for the kiln was found. LAND AT CHURCH STREET/FLEMING STREET, MARYPORT

Report on an Archaeological Desk-based Assessment and Field Evaluation on Land at Church Street/Fleming Street, Maryport, Cumbria

Gaskell, N Alston : North Pennines Archaeology Ltd., 2007, 48pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

A desk-based assessment located 43 sites from the HER, 46 Listed Buildings and five Scheduled Ancient Monuments within a 500m radius of the site. These included a Roman fort, Vicus settlement, parade ground and road, possible Roman artefacts, a medieval earthwork site and dozens of late 18th and early 19th century buildings scattered across the town. An internet search also provided records of 42 sites within 500m. These were mostly records of boats that had been built in Maryport or were registered there. The evaluation showed evidence of the original national school buildings still preserved at least in foundation levels. In one of the five trenches, evidence of structures were found. In Trench Four, four brick and red sandstone walls and a cobbled surface were uncovered, these walls could be accurately placed to match the cartographic evidence to a structure on the 2nd OS map from 1899. The late 19th century school does survive in part albeit at foundation level, there was no evidence for any earlier structures or features. [Au(adp)]

Archaeological Deskbased Assessment, Site Visit and Evaluation on Land at the Market Hall, Wigton, Cumbria

Sowerby, M Alston : North Pennines Archaeology Ltd., 2007, 49pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological desk-based assessment, site visit and evaluation revealed that 16 sites from the HER and 42 Listed Buildings were within a 0.5km radius. The evaluation demonstrated the survival of the washhouse to its foundation level. A series of walls and surfaces were observed within the trench which showed that when the building was demolished the main footprint and foundations were left in situ. Also observed were a series of layers pertaining to garden soils indicating that apart from the post-medieval building, the plot had seen little in the way of later/modern disturbances. The potential for earlier features remained probable. [Au(adp)]

LAND AT MARSH HOUSE, BURGH-BY-SANDS***Archaeological Evaluation on Land at Marsh House, Burgh-by-Sands***

Sowerby, M Alston : North Pennines Archaeology Ltd., 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

The evaluation failed to locate the vallum or any associated features. It did, however, reveal substantial and well preserved deposits of archaeological significance dating from the Roman period to the post-medieval period in both Trenches 1 and 2. The archaeological evidence for the Roman period comprised a possible defensive or boundary ditch from which the Roman pottery dating from the mid-second century was recovered. It was also evident that that ditch remained open as a landscape feature until the medieval period, as the upper fills of the ditch yielded a number of pottery sherds dating from the 14th to the 16th century. The post-medieval period was largely characterised by a sequence of shallow linear ditches and pits which appear to pertain to agricultural activity which showed evolving land boundaries. [Au(adp)]

CALDEW AND CARLISLE CITY FLOOD ALLEVIATION SCHEME, LITTLE CALDEW PUMPING STATION, BT DEPOT***Caldew and Carlisle City flood Alleviation Scheme, Little Caldew Pumping Station, BT Depot Archaeological Evaluation***

Rushworth, A Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 15pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

The evaluation was conducted in order to inform a proposal by the Environment Agency to construct flood defence works within the BT depot beside the confluence of the Little Caldew and Caldew rivers. The evaluation revealed 20th century river deposits which in turn sealed layers of 19th century household waste, mostly ash. These covered a line of timber stakes some 1.8m from the northeast end of the trench, which probably represented a timber fence marking the boundary between the gravel foreshore and the riverine silts and gravels of the channel. No trace was identified of the corn mill which was shown on historic maps to have covered this part of Willow Holme. The fence line and other archaeological features and deposits revealed in the trench may have been considered of only minor local significance. [Au(adp)]

LAND AT INFIRMARY STREET, CARLISLE***Report on an Archaeological Rapid Desk-based Assessment and Field Evaluation on Land at Infirmary Street, Carlisle, Cumbria***

Gaskell, N & Beaty, J Alston : North Pennines Archaeology Ltd., 2007, 51pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

A desk-based assessment located 35 sites from the HER, including two Listed Buildings and one Scheduled Ancient Monument within a 500m radius of the site. Tarmac and/or concrete surfaces of the recently pulled down buildings were observed in a site visit. The evaluation encountered evidence of the original sawmills. In two of the five trenches, evidence of structures was found. In Trench 1, a brick and red sandstone structure with a paved floor was uncovered. The structure matched an alignment and size of a structure depicted on the 1st OS map from 1865 and historic records. In Trench Four, a timber upright and post hole were uncovered within a possible floor surface. [Au(adp)]

Caldew and Carlisle City Flood Alleviation Scheme, Parham Beck and West Coast Main Line, Archaeological Evaluations, Willow Holme, Carlisle

Rushworth, A Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 22pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

The evaluation revealed that dumping had occurred with the aim of levelling the area over the past decades. A layer which could represent former railway trackbed perhaps sidings was revealed beneath modern dumps. During the 19th century Hadrian's Wall was reported to lay 2.4m below the contemporary ground surface. As a result of this investigation, it may be assumed to lie a further 1.5m beneath this, far below the level which would be impacted by construction operations for the flood embankment. The area investigated next to Parham Beck had been substantially disturbed by recent structures, and in addition rubbish deposits of 19th century date were encountered in the remainder of the area. No features of archaeological significance were encountered in any of the trenches. [Au(adp)]

Archaeological Desk-based Assessment and Archaeological Evaluation at Dalston Hall Holiday Park, Dalston, Carlisle, Cumbria

Martin, G Carlisle : Gerry Martin, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Gerry Martin

The desk-based assessment and the evaluation identified and defined the southern extent of Bishop's Dyke conjoining it with the extant Scheduled Ancient Monument. However, the monument remained undated. The likelihood was that it was a medieval earthwork probably defining a formal boundary, possibly between farmland and woodland rather than a defensive rampart or part of a series of fortifications. The study area that it enclosed possessed no apparent archaeological merit apart from an approximately east-west aligned undated field ditch. [Au(adp)]

BLENCOW HALL, NORTH TOWER

Blencow Hall, North Tower, Interim Report on Archaeological Excavations

Carlton, R Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2007, 9pp, colour pls, figs, tabs

Work undertaken by: The Archaeological Practice Ltd.

An archaeological excavation was carried out and revealed the remains of three stone drain courses two of which were well preserved another fragmentary, having been cut through by a successor. One of the

drains ran north-north-west along the west wall to a point in the corner directly below a first floor garderobe, suggesting that it may have drained or flushed the garderobe, but no evidence of a direct link between the two was found. The drains appeared in the southwest corner of the tower much of which had been robbed out. Dating evidence recovered above the culverts suggested that they were covered by the post-medieval period and that the floor above continued in use at least into the later 19th century. A piece of stamped glass and several decorated pottery sherds may have been able to shed more light on the date and nature of use of the tower. [Au(adp)]

STOBARS HALL, KIRKBY STEPHEN

Report on a Rapid Archaeological Desk Based Assessment and Field Evaluation at Stobars Hall, Kirkby Stephen, Cumbria

Sowerby, M Alston : North Pennines Archaeology Ltd., 2007, 33pp, colour pls, figs, refs

Work undertaken by: North Pennines Archaeology Ltd.

An archaeological evaluation and rapid desk-based assessment was carried out. A total of seven sites of historic and archaeological interest were identified within the study area. Aerial photography showed crop marks of prehistoric settlement to the south-east of the site. Furthermore medieval earthworks, remains of field systems and agricultural practices were located immediately to the south of the hall. The post-medieval period was largely represented by the construction of Stobars Hall and associated lodge in 1829. The results of the evaluation demonstrated the survival of a number of post-medieval and modern drains which appeared to pertain to agricultural practices. However, four of the evaluation trenches within the development area were unexcavated due to a number of factors. Several live services and drainage pipes were noted within Trenches 1 and 2. Trenches 7 and 8 were abandoned due to a leaking septic tank which made the ground unworkable for health and safety reasons. At the south

end of Trench Four a live telephone cable was encountered and similar cables were observed in Trench Three. As a result of this an additional trench was excavated along the north boundary of the development site. The evaluation produced no finds or deposits worthy of environmental sampling. [Au(adp)]

PROPOSED DEVELOPMENT AT FRENCHFIELDS, PENRITH

Archaeological Desk-based Assessment and Field Evaluation for Proposed Development at Frenchfields, Penrith, Cumbria

Sowerby, M Alston : North Pennines Archaeology Ltd., 2007, 61pp, colour pls, figs, tabs, refs

Work undertaken by: North Pennines Archaeology Ltd.

A desk-based assessment recorded a total of 39 sites of historic and archaeological interest. The evaluation found redeposited Roman layers with Samian Ware compressed within them. In Trenches 6 and 5, there were possibly parts of the same surface. An area of large stone cobbles may have been

remnants of a wall or foundation of a structure for metal smithing. The early medieval period was evidenced by three sunken buildings to the west of the development. Of the sites identified by the desk based assessment, only one undated earthwork will be affected by the development. An electrical resistance and magnetometer survey of the development area revealed a number of anomalies both natural and archaeological in origin. When excavated, they were of geological origin, except stone lined and capped drains noted in Trenches 5 and 6. [Au(adp)]

ULPHA Meadows, Foulshaw Moss Nature Reserve, Meathop, Cumbria Archaeological Rapid Desk Based Assessment and Evaluation

Bates, A Lancaster : Oxford Archaeology North, 2007, 43pp, pls, figs, refs
Work undertaken by: Oxford Archaeology North
 A rapid desk-based assessment and an archaeological evaluation was carried out at the site. The desk-based assessment demonstrated that prehistoric remains have been found within the environs of the

development site, however, none have been identified within it. The evaluation revealed no peat with potential for palaeo-environmental sampling within the development area, and the natural marine clay was generally located immediately beneath the shallow humic topsoil. Three features were located within two of the four excavated trenches and although no dating evidence was found, comparison with historic maps suggested that two were drainage or boundary features relating to the enclosed landscape of the first half of the 19th century whilst the third may have dated to the 18th century. The development was unlikely to have a negative impact upon the significant stratified prehistoric remains. Some form of archaeological monitoring and surveying may be of value in establishing the location and extent of elements of the pre-1859 field system. Allowing the identification of any earlier features meriting more detailed investigation and the recovery of dating evidence. [Au(adp)]

Loom Street, Ancoats, Manchester An Archaeological Excavation of Late Eighteenth and Nineteenth Century Worker's Housing

Gregory, R Manchester : University of Manchester Archaeological Unit, 2007, 93pp, colour pls, figs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological excavation was carried out at the site revealed late 18th and 19th century worker's housing. These house types included large double-depth properties of a comparatively high status which may have originally housed artisans in the late 18th and early 19th century and smaller back-to-back and blind back worker's housing. Many of the smaller houses were arranged around insalubrious courtyards and, at times, may also have been associated with cellar dwellings. [Au(adp)]

An Archaeological Evaluation at Chester Road/Great Jackson Street, Manchester, Greater Manchester

Pre-Construct Archaeology Ltd Durham : Pre-Construct Archaeology Ltd., 2007, 64pp, colour pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological evaluation was carried out at a site within an Archaeological Priority Zone, south of the Roman fort and associated settlement adjacent to the line of the Roman road to Chester. In Trench 1, no Roman activity was noted and post-medieval activity was limited. Trench Two recorded remains of an extensive basement of the former Van Tavern Public House. Trench Three uncovered a stepped foundation dating to 1830 and some smaller associated brick structures. Trench Five encountered a substantial Roman ditch and a possible post-medieval cess pit. Trench Six uncovered four brick structures, two narrow walls, a brick lined well and a fragment of a brick lined pit. Trench Seven encountered a substantial basement and a brick lined drain. Trench Nine encountered evidence of multi-phase Roman activity including a ditch, building material, pottery, linear features and a pit. The post-medieval period was further represented in Trench Nine by structures, a cess pit, a wall and a salt glazed waste pipe [Au(adp)]

THE OLD VICARAGE, MELLOR, STOCKPORT

The Old Vicarage, Mellor, Stockport. An Interim Report on the 2007 Season

Noble, P, Garratt, R & Thompson, A Manchester : University of Manchester Archaeological Unit, 2008, 78pp, colour pls, figs, tabs, refs

Work undertaken by: University of Manchester Archaeological Unit

An archaeological excavation was carried out at the site, part of an ongoing project that commenced in 1998. The excavations had revealed evidence for a large and multi-phased site first utilised during the Mesolithic period, with peaks of settlement activity during the Iron Age and Romano-British periods and another during the late eleventh to late fourteenth/early fifteenth centuries AD. During the Iron Age the site was occupied by a series of roundhouses and was enclosed with the cutting of two ditches. The first so called outer enclosure was a relatively shallow and narrow ditch which ongoing

geophysical surveys and test trenches suggest enclosed an area of c.20 ha. The second inner ditch was both wider and deeper with an interior palisade slot and appeared to enclose an area c.80m east west by 60m north-south. It was unclear, due to key intersections inaccessibility, how if at all these two ditches related to each other. [Au(adp)]

CLITHEROE CASTLE*Clitheroe Castle, Clitheroe, Lancashire. Archaeological Investigation*

Bradley, J Lancaster : Oxford Archaeology North, 2008, 101pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

Nine small trenches were excavated in advance of a museum extension within the castle grounds. Significant archaeological features were cut into the solid geology and underlying layers, all of which yielded medieval artefacts from the 13th and 14th centuries. This area, around the castle keep, was evidently extensively occupied during this period. The five trenches located to the rear of the museum revealed a variety of features, including a substantial stone footing thought to form part of a building that preceded the museum, along with layers associated with its demolition. It was concluded that these remains warranted preservation in situ, and a program of mitigation was recommended. These works were carried out in September 2007 and confirmed that significant remains from the 12th to 18th centuries surveyed across the site. [Au(adp)]

Hughes, V Lancaster : Oxford Archaeology North, 2008, 45pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

The evaluation confirmed the presence of the surviving remains of George's Ferry Basin, built around 1770, and George's Baths, built in 1828. Three other features were identified in the works, a large curved sandstone and iron structure which was the foundation for the bridging to a ferry landing stage that extended to the west, a section of brick culvert, and a second brick wall. SEFTON COAST***An Archaeological Assessment of the Sefton Coast, Merseyside***

Adams, M & Harthen, D Liverpool : Liverpool Museum Field archaeology Unit, 2007, 132pp, colour pls, figs, tabs, refs

Work undertaken by: Liverpool Museum Field archaeology Unit

One of the most remarkable features of this stretch of coast was the exposure of a suite of human and animal footprints forming in marine sediments weathering out of the foreshore. There was little or no evidence for settlement in the area during the later prehistoric or Romano-British periods, beyond stray Roman finds. From the 16th century there was documentary evidence for attempts to stabilise the dunes for planting marram grass. Late asparagus beds were found there in the 18th century.

Abandonment of the beds began in the 1950s when some were used for dumping de-nicotinised tobacco waste between 1956 and 1975. [Au(abr)]

LAND AT SPITAL ROAD, BROMBOROUGH

Land at Spital Road, Bromborough, Merseyside. Desk-based Assessment and Evaluation

Oxford Archaeology North Lancaster : Oxford Archaeology North, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

The evaluation consisted of three trial trenches positioned in order to target any remains associated with the Bromborough watermill and bridge identified in the desk-based assessment. The results indicated that the 1949 demolition of the mill had been extremely thorough and no evidence of the complex remained, nor any evidence for potential water management. [Au(adp)]

ST. ELPHIN'S PRIMARY SCHOOL, SALISBURY STREET, WARRINGTON

St. Elphin's Primary School, Salisbury Street, Warrington, Cheshire. Rapid Desk-based Assessment and Evaluation Report

Bates, ALancaster : Oxford Archaeology North, 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

A desk-based assessment determined that although no upstanding remains or earthworks of the motte and bailey castle were present at the site, archaeological features and horizons below ground level could have remains in a good state of preservation. The trial trench excavations comprised five trenches (20m by 1.8m) within the footprint of the proposed school buildings. The excavations produced no early medieval or medieval features or artefacts, and no trace of the motte or bailey. A Roman gully, contained three fragments of 2nd century AD mortaria was detected in the north-eastern

part of Trench 1. Within the south-western part of Trench 4 was a north-south orientated ditch. Although this contained no finds, it probably formed part of a field boundary depicted here on Hall's map of 1826. Trenches 2, 3 and 5 detected alluvium buried beneath thick deposits of post-medieval make-up layers. The proposed school buildings lay within the close proximity to the medieval castle and potentially an earlier medieval manorial site. Roman and probable post-medieval features did occur within the building footprint. [Au(abr)]

THE ORCHARD, MOAT LANE, ASTON ABBOTTS

An Archaeological Evaluation at The Orchard, Moat Lane, Aston Abbots

Moore, J Beckley : John Moore Heritage Services, 2007, 19pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

The evaluation found evidence for three phases of activity on the site. The earliest was represented by residual Neolithic flints, the second Late Bronze Age/Iron Age boundary ditches and post holes possibly indicating a settlement, and the third by apparent plot boundaries and pits on Moat Lane dated to the 11th and 12th centuries. It was likely that there would have been buildings in the area, even though no evidence for these was forthcoming. [Au(adp)]

BUCKINGHAM STREET, AYLESBURY

Buckingham Street, Aylesbury, Buckinghamshire. Archaeological Evaluation Report [Phases 1 & 2]

Wessex Archaeology Salisbury : Wessex Archaeology, 2007, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The report presented the results of two phases of evaluation. This demonstrated a localised potential of survival for archaeological features across the site, despite widespread truncation by Victorian building. The investigation suggested a good potential for the survival of at least deeper medieval and post-medieval features, such as cess pits, pits and wells, in the eastern and north-western part of the site. However, only limited evidence for earlier activity was recorded, in the form of residual Roman artefacts. No remains of the historically attested Baker's Lane Chapel were identified. [Au(adp)]

NEW POLICE HEADQUARTERS BUILDING, WENDOVER ROAD, WALTON, AYLESBURY

New Police Headquarters Building, Wendover Road, Walton, Aylesbury, Buckinghamshire. Archaeological Desk-based Assessment and Trial Trenching

Smith, M & Osborn, V Bedford : Albion Archaeology, 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Albion Archaeology

A desk-based assessment and trial trenching evaluation were carried out on the site of a proposed new office building at the headquarters of Thames Valley Police. The site lay in an area of archaeological significance with extensive settlement remains of Bronze Age through to Anglo-Saxon date located nearby. In the immediate vicinity, evidence for late Iron Age and Romano-British agricultural activity has been found. The results of the desk-based assessment suggested that there was a high probability that the site would contain locally significant archaeological remains and that any remains within the area were likely to be well preserved. Archaeological features were found during the trial trenching. However, they could not be accurately dated and therefore their significance remains uncertain. The trenching also found evidence to suggest that the preservation of any archaeological remains at the site may have been affected by activities associated with past cultivation and the more recent construction of the police station. MANOR FARM, BROUGHTON

An Archaeological Evaluation at Manor Farm, Broughton, Buckinghamshire

Parsons, M Beckley : John Moore Heritage Services, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

The evaluation revealed evidence for continuous activity from the 12th to 16th centuries. A large outer enclosure to the moated site to the east was found, perhaps originating in the 12th century and enlarged in the 13th and 14th centuries. Ditches appeared to have subdivided this feature. A probable building and long-used path were evident. A gully was found, external to the outer enclosure. This may have predated the outer enclosure along with another ditch/gully on the same alignment, but found within the area of the enclosure. An earlier stream course, remains of post-medieval barns and a yard surface were recorded. A small assemblage of hand-built Saxon pottery suggested that there were likely to be remains of that date in the vicinity. Residual Iron Age and Roman pottery was also found. [Au(adp)]

MANOR FARM*An Archaeological Evaluation at Grange Farm, Shipton Lee, Quainton, Buckinghamshire*

Moore, JOxford : John Moore Heritage Services, 2007, A4 report

Work undertaken by: John Moore Heritage Services

The evaluation revealed that the main area of the farmyards and buildings were void of any significant archaeological remains other than a few post holes, driven stake alignments, and several stone drains that are probably associated with the post medieval farm. No evidence for the medieval grange or associated buildings was seen. Limited dating evidence was forthcoming although it is argued that barn B7 was originally of 17th century date, rebuilt in the 18th century. It is also argued that the 'Old Barn' B1 is more likely to be of later 17th century, or possibly even later, date. The similarity of the flooring in the barns examined and the farmyards suggests a refurbishment of the farm complex in the 18th century. [OASIS(Au)]

An evaluation was carried out for Channel 4's "Time Team", revealing medieval features and deposits. A series of hearths and associated structures appeared to have been of later medieval and early post-medieval date and probably represented a kitchen or bakehouse either within the manor house or in a separate, auxiliary building. A large boundary ditch surrounding the site was thought to have been of medieval date, backfilled in the post-medieval period. Structural remains to the west and north-west were of post-medieval date and may have represented parts of the buildings depicted on the 1735 Bedford estate map. [Au(adp)]

LAND AT STANTONBURY, MILTON KEYNES***Land at Stantonbury Park, Milton Keynes Non-Intrusive Stages of Archaeological Field Evaluation***

Edmondson, G Bedford : Albion Archaeology, 2004, A4 client report cream cover, colour figures

Work undertaken by: Albion Archaeology

Albion Archaeology was commissioned to undertake the archaeological evaluation of approximately 80 hectares of land on the northern edge of Milton Keynes. A geophysical (fluxgate gradiometer) survey was undertaken in two episodes between late August and early September 2004, targeting the three areas of proposed development within the eastern area. In April 2007 Albion Archaeology undertook an archaeological field evaluation (trial trenching) on land at Stantonbury Park, Milton Keynes, on behalf of CgMs Consulting. The evaluation comprised the excavation of 85 trial trenches. The majority of the trenches contained the backfilled remnants of furrows with at least two medieval/post-medieval field systems being identified within the development area. The remaining archaeological remains were concentrated within the north-western part of the development area. They consisted of ditches and gullies with the occasional pit and posthole. The majority of the features were undated. Two field boundary ditches, a drainage gully and a shallow depression were dated to the mid-late Iron Age. The overall paucity of artefacts and occupational debris would suggest that these remains were not located in the immediate vicinity of a domestic settlement but on its periphery. They were probably associated with farming activities. [OASIS(Au)]

RADCLIFFE SCHOOL***Archaeological Evaluation: Radcliffe School, Wolverton, Milton Keynes***

Wilson, N Milton Keynes : Archaeological Services & Consultancy Ltd., 2007, Bound A4 report

Work undertaken by: Archaeological Services & Consultancy Ltd.

During May 2007, an archaeological evaluation was undertaken at Radcliffe School, Wolverton, in advance of development. Earlier geophysics work on the site had identified a number of magnetic anomalies interpreted as ditches and pits. Based on the results of the geophysics, two areas were trenched. Nineteen trenches were opened to the north of the school on the playing field and four in a field to the south of the school. Within the northern area a number of linear features interpreted as Roman field boundary ditches. Two pairs of parallel ditches orientated SE-NW were interpreted as trackside ditches. A number of small Roman pits were also identified in this area. The only non Roman feature identified was a small pit from which a number of sherds of early Saxon pottery were recovered. In the southern area there was generally less archaeology. However, a crouched burial was uncovered in one of the trenches. Though no material to date the burial was found, this type of burial is generally associated with the prehistoric period and the Bronze Age in particular. It is possible that the burial was under a barrow mound, though no evidence for such a mound or surrounding ditch was seen during the evaluation. [OASIS(Au)]

An Archaeological Evaluation at Land at Upper Meadow, 23 Hedgerley Lane, Gerrard's Cross, Buckinghamshire

Collings, M Portslade : Archaeology South-East, 2007, 22pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken at Land at Upper Meadow. Twenty trenches were excavated. No archaeological deposits or features were encountered. A small assemblage of artefacts were recovered from the topsoil and subsoil, this predominantly comprised of ceramic building material (CBM) dating to the later 17th century to early 19th century. Several worked flints were collected, however, this assemblage was too small and limited to be considered diagnostic and was primarily recovered from the subsoil with CBM. [Au(abr)]

LANGLEY PARK HOUSE

An Archaeological Evaluation at Langley Park House, Buckinghamshire

Hart, D Portslade : Archaeology South-East, 2007, 13pp, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation on land at Langley Park House was undertaken. The fieldwork comprised the excavation of four trenches across the area of a proposed development. Archaeological remains observed on the site consisted of the remains of an east-west brick wall, thought to represent the remains of a cellar, a brick built culvert and an isolated pit and post hole, all seen to be cut into the surviving subsoil of the site. Brick fragments recovered from the wall, culvert and pit all indicated a late 16th-early 18th century date, though in all cases the brick was either residual or reused. The construction of the potential cellar wall was thought to date to the latter half of the 18th century when Langley Park House and its grounds were extensively remodelled. All these features were sealed by a sequence of made ground, in turn sealed by tarmac and hardcore of the car park that occupied the site. A thin layer of metalling was observed beneath the tarmac and hardcore of the current car park towards the centre of the site, thought to represent a precursor to the latest surfacing. [Au(abr)]

GRAND OCEAN HOTEL*An Archaeological Evaluation on Land at the Grand Ocean Hotel, Saltdean, East Sussex*

Meaton, C Portslade : Archaeology South-East, 2007, Ring bound soft covered

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken on land at The Grand Ocean Hotel in Saltdean. The site lies off Longridge Avenue, high up on the west facing slope of the Saltdean valley and covers an area of approximately 1.9ha. Planning permission has been granted to develop the site into apartments and associated car parking and landscaping. A total of 17 trenches were excavated with a cumulative length of 260 metres. No significant archaeological remains were revealed, and it was found that the hotel complex had been deeply terraced into the valley side, resulting in the truncation of overlying soils and subsoils, and almost certainly any archaeological features surviving at the time. The south west extent of the site appeared to have suffered the least modern disturbance, but the trial trench sample in this area failed to reveal any notable archaeological deposits. An extensive feature was identified in a number of the down slope trenches, running the length of the site, parallel to Withysham Road. This feature may relate to 20th century terracing, or alternatively to natural variability in the underlying topography and chalk substrate. [OASIS(Au)]

Meaton, C Portslade : Archaeology South-East, 2007, 68pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

Archaeological background research was undertaken in advance of a new Ouse Valley Transfer Scheme. Two new pipeline routes were investigated between Ringmer and Glynde [Phase 2], and also between Durham Farm and South Heighton [Phase 3]. A review of the SMR data revealed a large number of sites in the vicinity, dating from the Neolithic through to the medieval period. Furthermore, an investigation of the cartographic evidence showed the rural landscape to have been relatively static during the post-medieval period, although a number of field boundary changes were noted, some of which were identified during the course of a walkover survey. Apart from the boundary changes and a railway siding, no known sites were directly impacted by the groundwork. However, both routes were seen to be immersed in important prehistoric landscapes, and similarly embedded within historic rural communities. As such, the potential for impacting previously unrecorded archaeological sites was considered high. [Au(abr)]

GREYFRIARS, WINCHELSEA***An Archaeological Evaluation at Greyfriars, Winchelsea, East Sussex***

Collings, M Portslade : Archaeology South-East, 2007, 45pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken at Greyfriars, Winchelsea, a medieval planned town, dating to the end of the 13th century. The work was undertaken prior to the proposed creation of a new southern approach to the mansion at Greyfriars, it was intended that the driveway would follow the alignment of the medieval street. In order to clarify the route of the medieval street an intrusive field evaluation was undertaken in tandem with a detailed targeted topographical survey. The latter was carried out to map and record the earthworks and features present within a c.1.5ha survey area. Four trial trenches were excavated. Hand excavation of archaeological deposits and features beyond that necessary to sufficiently clean and expose them was not undertaken at this stage as the archaeological remains were to be preserved in situ and the field evaluation was designed to inform further mitigation, namely the decision regarding granting Scheduled Monument Consent for the planned development. Archaeological deposits and features relating to the construction of the bank and the medieval roadway were observed and recorded. The route of the medieval road was clearly identified and the remains of the road surface were recorded. The possible fragmentary remains of a surface were revealed along the alignment of the road. This provided physical evidence for the positioning and alignment of the road and in tandem with the topographical evidence clarified the route of the road. In addition to this the results of the evaluation and the topographical survey provided evidence for later land use towards the north of the site. [Au(abr)]

PROPOSED CONSTRUCTION OF A CAR PARK AT THE SWAN INN, NEWTON, BURGHCLERE

Proposed Construction of a Car Park at the Swan Inn, Newton, Burghclere, Hampshire (NGR SU47656380): Scheduled Monument No 520 Results of an Archaeological Evaluation

Cox, P W & Whelan, J Chicklade : AC archaeology , 2007, 12pp, colour pls, figs, tabs, refs, CD

Work undertaken by: AC archaeology

An archaeological evaluation by trial trenching was undertaken at the site. The car park extension lay wholly within the boundary of the Scheduled Monument (HA520) known as the Deserted Medieval Town of Newtown. The evaluation was undertaken, in accordance with the terms of a Scheduled Monument Consent, to determine whether there were any significant archaeological deposits within the development area that would require protection from compaction during development or otherwise be affected by the construction of the car park and associated landscaping. The evaluation comprised three trenches. Each revealed a similar sequence of infilling deposits toward the east side of the site arising from the reclamation of the edge of the adjacent stream channel. Dateable artefacts recovered from these deposits indicate that this reclamation was undertaken in the later nineteenth or early twentieth century. No dateable subsoil features of pre-modern date were identified. Three conjoining sherds of probable twelfth century medieval pottery were recovered from topsoil. [Au]

LAND TO THE NORTH OF LAKESIDE, EASTLEIGH***Summary on an Archaeological Evaluation on Land to the North of Lakeside, Eastleigh***

Roberts, C Southampton : Southern Archaeological Services, 2008, 23pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services

The evaluation area comprised three parcels of land. The first phase of evaluation, in August 2006, investigated the open grassland resulting in the discovery of six small undated linear features. A few fragments of charcoal and some undated finds of ceramic material were recovered from one of these discrete features, suggesting a prehistoric date. The second phase, in August 2007, evaluated the allotments, still in land use, at the eastern end of the site. A modern linear feature (which was found to be an allotment boundary ditch) and two modern natural features, possibly animal burrows, were

recorded. Two unstratified finds were recovered, a sherd of possibly Roman or Anglo-Saxon pottery and a probably Bronze Age flint Flake. [Au(abr)]

ST. ANDREW'S CHURCH, SOUTH WARNBOROUGH

St. Andrew's Church, South Warnborough, Hampshire. An Archaeological Excavation Report

Hawtin, T Portslade : Archaeology South-East, 2007, 41pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological excavation was carried out at the site. The footprint of the new porch was excavated to an agreed plan and the ground reduction works for the new pathway and drainage were monitored as an archaeological watching brief. In total 29 articulated skeletons, including two from the drainage run and numerous disarticulated bones were excavated recorded and re-interred on the site. A lead coffin was uncovered which was preserved in situ and part of a brick vault was seen running underneath the wall of the 1869 extension to the church. With the exception of some Victorian brickwork that may have represented a brick vault disturbed during the 1860's renovation works, no other archaeological finds, features or deposits were recorded. PLOT 81, WALWORTH INDUSTRIAL ESTATE, ANDOVER

An Archaeological Evaluation at Plot 81, Walworth Industrial Estate, Andover, Hampshire

Collings, M Portslade : Archaeology South-East, 2007, 21pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken. Six trenches were excavated in advance of the proposed development, located within an undeveloped plot on the estate. Whilst the site had not been developed it may have been affected by general development in advance of the construction of an industrial complex in particular that of surrounding industrial units. It had certainly been affected by the construction of an anti-traveller bund and outer ditch around the northern and western perimeter of the site. Further, there was a visible bank of soil along the southern edge of the site which appeared to have been dumped, separately of the construction of the bund thus indicating additional ground disturbance on the site. The evaluation proved that modern landscaping of the site, evident from visual inspection, had probably had a detrimental effect on the survival of archaeological remains. A very small artefact assemblage was recovered subsoil. This was too small to be considered diagnostic. There was occasional modern waste such as a modern plastic bottle in the area the finds were recovered from. No remains of archaeological significance were observed and it was likely that modern activity and usage of the site, in particular the creation of the bund and ditch, had a detrimental effect on the survival of archaeological remains within the boundary of the site. St. John Ambulance HQ, Bishops Waltham. Archaeological Evaluation Report

Clelland, S Salisbury : Wessex Archaeology, 2007, 12pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation was carried out at the site and revealed a largely undisturbed soil profile along the length of the trench containing occasional fragments of medieval pottery. A large tree throw hole was recorded at the southern end of the trench containing pottery, flint artefacts and burnt flint.

The depth and undisturbed nature of the soil profile suggested that any archaeological remains located within the development site would survive intact. It was considered in light of the evaluation and the results of previous work around the site that in order to discharge the planning condition a programme of further archaeological mitigation may be required by the local planning authority. This was likely to have taken the form of an archaeological watching brief. [Au(adp)]

SITE 3, SOUTH WINCHESTER PARK AND RIDE

Site 3, South Winchester Park and Ride, Hampshire Archaeological Evaluation And Watching Brief Report

Wessex Archaeology Salisbury : Wessex Archaeology, 2007, 36pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation and watching brief was carried out at the site from 2006 to 2007. A total of seven geotechnical trial pits were excavated, with four located in the north field and three in the south field. No archaeological features were revealed. The evaluation strategy was developed from the results of a geophysical survey and watching brief. A total of seventeen trial trenches were excavated. Seven of these were located in the north of the site with the remainder in the south. The trenches revealed that the extent of truncation in the northern field was not as extensive as anticipated from the geophysical results and post holes and ditches of Late Iron Age-Romano-British date were investigated. The southern trenches which targeted anomalies from the geophysical survey confirmed the presence of a Romano-British ditched enclosure next to a surfaced route way at the southern end of the site. Occupation debris recorded from the enclosure ditch suggested settlement activity. Other archaeological features included a possibly Early Neolithic pit. [Au(adp)]

LAND TO THE REAR OF 63-67 CHURCH STREET, MICHELDEVER

Land to the rear of 63-67 Church Street, Micheldever, Hampshire. An Archaeological Field Evaluation

McConnell, R & Fairclough, P Wincanton : Context One Archaeological Services, 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Context One Archaeological Services

An archaeological evaluation was carried out at the site and revealed six archaeological features, all of which restricted themselves to Trenches 1 and 2. This included a Late Saxon refuse pit, three post holes, one of which was dated to the Early Middle Saxon period and two soil horizons attributed to the Saxon and medieval periods. A Roman fibula brooch and a small quantity of Roman roof tile were also identified. It was likely that the features reflected occupation of the site during the Saxon period although there was some evidence to suggest an earlier foundation during the Roman period. A small assemblage of worked flint from the Late Mesolithic to Late Bronze Age additionally recovered from the evaluation and although residual this attested to transient activity at least during the prehistoric periods. [Au(adp)]

LAND TO THE WEST OF WATERLOOVILLE

Land to the West of Waterlooville, Hampshire. Phase 1 and Infrastructure. Archaeological Evaluation Report

De Rosa, D Salisbury : Wessex Archaeology, 2007, 153pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation comprised the excavation of 380 trial trenches. Areas A, B, E and F were largely devoid of archaeological features. There was a scattering of archaeological features: small ditches, pits, hearths and post holes, none of which produced any dating evidence, although some contained charcoal and burnt flint. Evidence of post-medieval drainage ditches and former field boundaries were recorded in a number of trenches. High archaeological potential was identified in Areas C, D and G. These produced evidence of settlement activity dated to the late Iron Age/Roman period and a ditch containing large quantities of burnt flint, as well as small ditches dated to the same period. In the north of the area evidence was found for an enclosure ditch, possibly enclosing a settlement. [Au(abr)]

Archaeological Investigations at Plot 20, "Local Centre", Eureka Business Park, Ashford

Thorne, A Portslade : Archaeology South-East, 2007, 107pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was carried consisting of 24 trial trenches. Archaeological features were discovered in the north and eastern part of Plot 20. These comprised Late Iron Age/Early Romano-British ditches and two pits. No archaeological features were observed in Plot 2. The ensuing archaeological excavation was therefore targeted in the north and eastern part of Plot 20 encompassing an area of approximately 4300 square meters. Late Iron Age to Early Roman ditch systems were revealed in association with a later enclosure and drove way dating to the Roman period and a number of pits and post holes. The site contributed to a growing understanding of the Late Iron Age and immediate post-Conquest landscape of the Ashford environs. [Au(adp)]

ASHFORD BARRACKS PHASE 7, ASHFORD

Ashford Barracks Phase 7, Ashford, Kent. An Archaeological Evaluation Report

Hart, D Portslade : Archaeology South-East, 2007, 25pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation comprising seven trenches across the area of a proposed development found that the archaeological sequence was considered to largely have represented low level agricultural activity and consisted of two undated post holes situated towards the southeast of the area and two undated ditches towards the centre of the area, as well as a shallow pit containing a single sherd of Late Iron Age/Roman pottery in addition to industrial residues indicative of small scale iron smelting. These findings were generally consistent with the results of work undertaken elsewhere on the site which had revealed evidence of Late Iron Age/Roman agricultural activity. Other features included a post-medieval boundary ditch probably associated with the environs of the nearby Repton Manor, and at least two small irregular features of natural origin. Generally speaking the excavated sequence was sealed by a sequence of subsoil and topsoil measuring up to 0.50m in depth though in places a substantial sequence of made ground up to 0.90m deep was also noted. Helm, R Canterbury : Canterbury Archaeological Trust, 2008, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

An archaeological evaluation exposed archaeological features and deposits comprising late prehistoric pottery, including some with inclusions of daub. A number of cut features truncated this deposit. Two parallel linear features were sample excavated but could not be dated. Two pit features were sample excavated, one of which contained a residual prehistoric flint flake and a fragment of late medieval/post-medieval plain roof tile. The edge of a large cut feature tentatively interpreted as a late post-medieval or later quarry pit was identified. In some areas, the ground surface was formed of modern made ground forming an artificial terrace between the south-west border of the PDA and the boundary with Canterbury College. [Au(adp)]

KINGSMEAD SPORTS STADIUM, KINGSMEAD ROAD, CANTERBURY*Kingsmead Sports Stadium, Kingsmead Road, Canterbury, County of Kent. Geoarchaeological Assessment Report Stage 2 and 3*

Halsey, C London : Museum of London Archaeology Service, 2007, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Geoarchaeological assessment was carried out at the site comprising of a borehole survey, where a previous watching brief had identified a Bronze Age peat horizon buried beneath a series of alluvial clays. This part of the site contained a more varied deposit sequence than identified across the rest of the site. The borehole survey aimed to refine the sites stratigraphy and assess the preservation level of the palaeo-environmental remains. The basal deposits of the site consisted of Pleistocene gravels which were deposited in a fast flowing braided river system c. 18,000 to 15,000BP. These were overlain by a series of finer grained sands and clays which were thought to be of late glacial date (c. 15,000 to 10,000 BP). Radiocarbon dating of the peat found in the north part of the site dated the onset of the peat formation at c. 1100BP. The peat appeared to be infilling a former channel of the Stour and had moderate levels of pollen preservation. The plant macrofossil was less well preserved. The uppermost units of alluvial clay found a pot sherd dating to the medieval period. [Au(adp)]

SPRING VALE, DARTFORD

An Archaeological Evaluation at Spring Vale, Dartford, Kent

Dawkes, G Portslade : Archaeology South-East, 2007, 14pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken at Spring Vale, Dartford. The evaluation consisted of 4 trenches, with an additional geoarchaeological test pit, to evaluate the potential Palaeolithic deposits, located at the end of each trench. The natural gravels were identified between 4mOD and 4.3mOD. The earliest activity identified were two features, a pit and a gully cut into the natural gravels. No finds were recovered from these features but the overlying sequence of alluvium dating to the Late Iron Age to Roman period suggested a contemporary or earlier date. The alluvium was up to 0.7m thick and had occasional finds of a pottery sherd dating from the Late Iron Age to 2nd century AD and Roman CBM fragments. Above the alluvium were post-medieval dark earths and modern rubble and gravels. [Au(abr)]

Holman, J Canterbury : Canterbury Archaeological Trust, 2007, 27pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

The machine excavated trenches revealed natural chalk truncated by a number of archaeological features, mostly in the form of pits and post holes and a single ditch. They probably formed part of an Iron Age settlement laying within a prehistoric landscape identified during previous archaeological works within the surrounding area. It seemed probable that one area of post holes represented a round house with a diameter estimated to be of approximately 10m. A small quantity of pottery, a large assemblage of burnt flint, two punding stones and several fragments of quern added weight to the suggestion that the site formed part of a small settlement. PLOT 24A, MENZIES ROAD, WHITFIELD*An Archaeological Evaluation of the proposed development of Plot 24a, Menzies Road, Whitfield*Holman, J Canterbury : Canterbury Archaeological Trust, 2007, 14pp, colour pls, figs, tabs, refs
Work undertaken by: Canterbury Archaeological Trust

The evaluation revealed limited archaeological deposits. A small flint filled pit, almost certainly of prehistoric date, a small post hole and two ditches were encountered. Very small quantities of prehistoric and Roman pottery were recovered from one of the ditches. It was suggested that the remains represented the periphery of a small Late Iron Age or early Roman settlement, probably located to the east of the site. [Au(adp)]

THE PROPOSED B&Q SITE ON THE WHITECLIFFS INDUSTRIAL ESTATE, DOVER*An Archaeological Evaluation on the proposed B&Q site on the Whitecliffs Industrial Estate, Dover*

Holman, J & Lane, R Canterbury : Canterbury Archaeological Trust, 2007, 48pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

The evaluation revealed the presence of prehistoric, Roman and post-medieval features all cut into the colluvium present on the site. A series of ditches that formed a probable field system was dated by ceramic evidence to the Roman period, as well as a Roman ditch nearby. Two intercutting pits and a linear feature that respected the line of the Roman road were also recorded. [Au(adp)]

THE PROPOSED BARWICKS DEVELOPMENT, WHITECLIFFS INDUSTRIAL ESTATE, WHITFIELD, DOVER*An Archaeological Evaluation of the Proposed Barwicks Development on the Whitecliffs Industrial Estate, Whitfield, Dover*

Holman, J Canterbury : Canterbury Archaeological Trust, 2007, 52pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

The evaluation identified archaeological features concentrated around Trench Eight. This area contained seven features including four possible ditches, a post hole, and indeterminate shallow features, probably pits. A ditch was located elsewhere on the site, as well as a more substantial ditch in the north-east corner of the site and a linear feature associated with this, containing a small assemblage of probable Neolithic flints and several fragments of probable Neolithic pottery. A heavily truncated pit was also encountered, containing a small quantity of very crude pottery and some burnt flint. [Au(adp)]

100 ACRE FIELD, WINGHAM WELL***Test pits and trench at 100 Acre Field, Wingham Well***

Handley, J Manchester : John Handley, 2007, 35pp, colour pls, figs, tabs

Work undertaken by: John Handley

A test pit and trial trench evaluation was carried out at the site. The work was undertaken after fieldwalking encountered a surface rich in Roman artefacts, comprising different pottery as well as bone and tooth in an area of approximately 10 meters in length lying close to a hedge running on the eastern side of the field. It was noticed that within the area were patches of very dark brown soil which were mixed in with the mid-brown clay. During further visits, more Roman material was discovered on the surface and over a wider area approximately 100 meters Roman tile was also found. Some test pits were dug in order to establish the nature and extent of the dark brown deposit and to gather a selection of artefacts in order to secure a date for the site and assist with understanding its purpose. The excavation uncovered many items including bone, tile, pottery, shell, iron and alloy artefacts including tools. The most northerly pit seemed to be the most fruitful. The black deposit was a very fibrous and humous rich and looked as if it could have indicated a rich land surface or possible burnt deposit. It was noticed that the site may be in slight hollow on three sides as if an occupation terrace may have been removed at some point, later to be filled in by weathering or ploughing. The site was also above or near what may have been a marine inlet. There was a spring within 0.5km to the south of the site and in Roman times this may well have been situated further up the river valley. The remnant of what may be a dried spring was situated in the same field and surrounded by trees. Further investigation would be required to confirm this conclusion. [Au(adp)]

Work undertaken by: Oxford Archaeology

The evaluation revealed evidence of a field system dating to the 1st or 2nd century AD. Undated enclosure boundaries were also revealed, which were on a similar alignment to known 12th-century ditches to the south of the site. Undated post holed structures or fencelines were also revealed that may have been contemporary with the medieval ditches. A post-medieval field boundary was also recorded. Test pits were excavated at the ends of the evaluation trenches, to investigate the Palaeolithic potential of the site. The revealed sediments were of an unknown date and no finds were recovered. Branch, N P, Green, C P, Batchelor, C R, Williams, K & Elias, S London : CgMs, 2007, 34pp, figs, tabs, refs

Work undertaken by: CgMs

An archaeological environmental assessment consisting of insect, macrofossil and pollen analysis and assessment was carried out at the site including radiocarbon dating the evidence, and revealed that sedimentation commenced sometime before 5650-5480 cal BC (7600to 7430cal BP) during the Late Mesolithic cultural period and continued after 650-780 cal AD (13000 to 1170 cal BP) although natural sedimentation was evidently truncated by modern ground disturbance. The transition from a fluvial environment to semi-terrestrial conditions during the Late Mesolithic was probably a response to local environmental conditions, possibly the lateral migration of the main stream channel and the formation of a back swamp area. Ferguson, B London : Museum of London Archaeology Service, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

An archaeological evaluation established evidence of cut features in the form of rubbish pits, field drains and possible quarry pits. The quarry pits undoubtedly related to the extraction of the underlying natural clay for the use in the manufacturing of bricks, while the field drains and the rubbish pits were probably the results of former agricultural activity and/or land management. Dating evidence recovered from some of the features dates them to later post-medieval period. There was no evidence for features associated with Bronze Age or later activity identified on sites to the south. [Au(adp)]

45 Queens Road, Minster-in-Sheppey. Report on evaluation trenching

Pratt, S Canterbury : Canterbury Archaeological Trust, 2007, 29pp, colour pls, figs, tabs, refs

Work undertaken by: Canterbury Archaeological Trust

The evaluation revealed natural Bagshot Beds overlain by flint pebbles, perhaps periglacial features. An Early Iron Age topsoil was found above this, worn or cut away, with an associated post hole and possible hearth. This was sealed by a gravel metalling, in turn overlain by a thicker old ground surface, possibly used for cultivation. One small and seven large post holes were cut into this and were thought to date to the Anglo-Saxon period, and may have represented two sides of a building. These were overlain by another metalling, and modern garden deposits and services completed the sequence. All dating evidence was considered tentative. Save, perhaps, for the bases of deeper features, total destruction of any surviving archaeological remains was predicted, due to the proposed development. [Au(adp)]

LAND NORTH OF DEERTON STREET FARM, DEERTON STREET, TEYNHAM***An Archaeological Evaluation on Land North of Deerton Street Farm, Deerton Street, Teynham, Kent***

Allen, T Whitstable : Kent Archaeological Projects, 2007, 28pp, figs, tabs, refs

Work undertaken by: Kent Archaeological Projects

The evaluation revealed Late Iron Age and Early Roman period features, some probably the remains of a round house, some possibly the remains of a Roman period structure, others probably derived from domestic activity associated with Late Iron Age/Early Roman period occupation in the south-eastern part of the site. Some ten metres to the north, residual Roman period tile fragments along with structural remains, probably associated with a building dating to the medieval period (c.1200-1350) were exposed. This group of trenches could be considered to be of moderate to high archaeological potential. The cutting of graves at least four feet deep would represent a significant threat to these remains. A probable Roman quarry partly backfilled with domestic detritus was exposed and could be designated as of low to moderate archaeological potential. It was suggested to use the archaeologically sensitive areas such as Trench Ten (which contained a shallow linear ditch like feature containing residual Roman tile) for cremation burials for which the maximum depth was 0.40m. LAND AT QUEX ESTATE, WEST OF ETHELBERT SCHOOL, CANTERBURY ROAD, WESTGATE ON SEA***Change of use from Agricultural Land to School Playing Field Land at Quex Estate, West of Ethelbert School, Canterbury Road, Westgate-on-Sea. Interim Results of a Metal Detector and Walkover Survey***

Moody, G A Birchington : Trust for Thanet Archaeology, 2007, 20pp, figs, refs

Work undertaken by: Trust for Thanet Archaeology

Archaeological works were carried out at the site. These included a documentary assessment, a metal detector survey followed by a rapid walkover to retrieve any artefacts, and a resistivity survey. Historical and archaeological background of the area consisted of Neolithic burials, cropmarks or ring ditches and Bronze Age barrows, Roman inhumations and other crop marks within the area. The resistivity survey found interesting results demonstrating that the main circular ditched enclosure on the aerial photography of the plot may be located slightly to the south of the position projected by the

RCHME. In addition, it appeared that the feature may have in fact have been two concentric ring ditched features, a type well known on Thanet and indicating a two phase refurbished monument. No further investigation of the feature was possible. The flintwork recovered from the field-walked area offered evidence of activity in the Neolithic and Bronze Age. Some fine bladework gave the possibility of a Late Mesolithic presence while a core gives more likely indication of Earlier Neolithic activity to which period the fine blades of potential Mesolithic date could easily be related. Tools of probable Late Neolithic/Early Bronze Age date were present. There was much material which was likely to be of broadly Bronze Age date, some of which probably indicated a more specifically Later Bronze Age presence as well. The metal detector survey produced 49 objects distributed over the field. The majority of the objects were amorphous and undatable and consisted mainly of nails, cutlery fragments and large fragments of agricultural equipment such as plough tines and tractor linkages. Datable objects of note included coins and tokens, dress fittings and musket and pistol balls. [Au(adp)]

LAND ADJACENT TO BLEAK HOUSE, FORT ROAD, BROADSTAIRS

Land adjacent to Bleak House, Fort Road, Broadstairs, Kent. Archaeological Evaluation Report

Moody, GA & Boast, EJ Birchington : Trust for Thanet Archaeology , 2007, 16pp, colour pls, figs, tabs, refs

Work undertaken by: Trust for Thanet Archaeology

An archaeological evaluation discovered remains dating from the Later Iron Age and Romano-British periods. This reflected a general pattern of settlement established by excavations from the later 19th to 21st century. In the limited excavation area it was not possible to establish the extent of the survival of

the natural topography of the site. Although the site had been levelled in the past with deposits of imported material brought in to form a platform, earlier deposits and truncated archaeological features had been encountered indicating that there was potential for the survival of further deposits over the development area if the existing ground levels were to be substantially reduced as was proposed for the development. FORMER STICKY FINGERS NURSERY, GRANGE ROAD, RAMSGATE

Former Sticky Fingers Nursery, Grange Road, Ramsgate, Kent

Moody, G & Boast, E J Birchington : Trust for Thanet Archaeology , 2007, 21pp, pls, figs, tabs, refs

Work undertaken by: Trust for Thanet Archaeology

Three evaluation trenches were excavated within the grounds of the Former Sticky Fingers Nursery. Archaeological features were encountered in the eastern and westernmost trenches. The outline of the cuts of two rectangular graves were encountered in the eastern trench. The full extent of Grave 1 and part of the north-eastern end of Grave 2 were exposed, both filled with similar greyish brown silty clay deposits. The upper edges of two pottery accessory vessels were observed towards the south-western end of Grave 1, parts of two vessels were also encountered at the north-eastern end of Grave 2. Fragments of human bone were found on the upper surface of the fill of Grave 1, human teeth were found close to the vessels suggesting the skull is located at the southwest end. In Grave 2 a fragment of skull was observed at the north-east end of the grave suggesting that the skull was located at this end in proportion to Grave 1. Both graves were heavily truncated by scars from a toothed machine bucket, presumably at the time of the demolition of the nursery building. The definite outline of another grave was exposed in Trench Three, with a concentration of deposits to the east of this grave possibly representing the fills of two further graves. Two modern pits were encountered in Trench One and 3. In the third central trench, no archaeological features were present although there was evidence in the northern end of this trench for the terracing of natural chalk deposits probably during the demolition of the former nursery building. LAND ADJACENT TO 19 MOUNT GREEN AVENUE, CLIFFSEND, RAMSGATE*Land adjacent to 19 Mount Green Avenue, Cliffsend, Ramsgate. Archaeological Evaluation Report*

Hart, P C & Moody, G A Birchington : Trust for Thanet Archaeology, 2007, 16pp, figs, tabs, refs

Work undertaken by: Trust for Thanet Archaeology

An archaeological evaluation was carried out at the site and encountered four features. Two shallow cut features produced no finds or datable material. A linear gully crossing the trench in an east west orientation contained a small number of worked flint. At the south-eastern end of the trench a shallow scoop containing pottery of Early Bronze Age date and flintwork mainly waste flakes. The deposits were sealed by a deep deposit of hill wash, which merged imperceptibly into the upper fills of the archaeological features. The hillwash deposit contained flintwork and pottery of Bronze Age to Iron Age date dispersed sparsely throughout the material. A subsoil and topsoil deposit, possibly associated with the original development of the Mount Green Avenue area, overlay the hill wash. [Au(adp)]

Moody, G A Birchington : Trust for Thanet Archaeology, 2007, 8pp, colour pls, figs, refs

Work undertaken by: Trust for Thanet Archaeology

An archaeological evaluation was carried out at the site and revealed a number of structures which explained the substantial truncation of the site. There was an area filled with debris and scrap metal which might have been the result of a bomb strike, although there was no record of such in this area. A number of buildings had been cleared from the site and a new factory/workshop building was built to the west of the site in 1947, indicating the clearance of the area after the war. [Au(adp)]

Moody, G A Birchington : Trust for Thanet Archaeology, 2007, 12pp, figs, tabs, refs

Work undertaken by: Trust for Thanet Archaeology

An archaeological evaluation was carried out at the site. Trench One encountered two natural features and a third irregular feature which may have been natural or an outshoot of a later archaeological gully. Another sub-rectangular pit or post hole was excavated further east in Trench 1. Trench Two exposed a more compact chalk deposit with brickearth runnels but no archaeological or natural features were present. No finds were found except a stray human metatarsal, recovered from the overburden at the western end of Trench 1. This may have been brought in with spoil tipped on the site. [Au(adp)]

Work undertaken by: Archaeology South-East

The evaluation revealed eleven linear features, seven of which contained prehistoric material including pottery sherds dating to the late Bronze Age and late Iron Age. It was thought that the linear features formed prehistoric field enclosures. The other four linear features produced either no dating evidence or Victorian material. Other pits were identified, one containing prehistoric struck flint. The potential for finding further remains on the site was considered to be high. [Au(adp)]

FORMER ALLOTMENTS SITE, MANSTON ROAD, RAMSGATE*An Archaeological Evaluation at Former Allotments Site, Manston Road, Ramsgate, Kent*

Collings, M Portslade : Archaeology South-East, 2007, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken at the former allotments site. 37 trenches were excavated. Archaeological features were recorded in four of these, which comprised four shallow linear features, a probable pit and several small intercutting features. Only single linear features were recorded in two trenches and two linear features were recorded in another trench. Several features were investigated in trench three, which comprised a probable pit or terminus of a linear feature, which produced a quantity of pottery dating to the 11th to 12th century and five small intercutting features, three of which also contained pottery dating to a similar period and a stakehole. The rim of a vessel, possibly an amphora was uncovered in Trench Five, maybe representing a funerary deposit. This was left in situ and would be excavated during any future work. The small assemblage of flint collected during the evaluation was mostly undiagnostic and was likely to have dated to the late prehistoric period, possibly the Bronze Age. Modern features probably associated with the use of the site as allotment gardens were recorded in two trenches. [Au(abr)]

LAND AT HOO ROAD, WAINSCOTT

An Archaeological Evaluation Report Land at Hoo Road, Wainscott, Kent

Godden, D London : CgMs, 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology, CgMs

An archaeological evaluation was carried out at the site comprising 92 trenches. This revealed archaeological features, mainly on the lower slopes of the hill on the eastern side of the northern field. The features were dated predominately to the Roman or Saxon periods although it was often problematic to differentiate between the two. The features were probably associated with both the Roman enclosure and the small Saxon settlement found during investigation work prior to the construction of the Wainscott Bypass and immediately to the north of the present site. The western edge of a possible Saxon farmstead was revealed in the southern field. The archaeological features included one Late Bronze Age pit, two Roman ditches, five Saxon ditches, nine undated but pre-modern ditches and three pits, five indeterminate cuts, six tree holes or root disturbances and three post holes, all undated but pre-modern. One post hole of post-medieval date was recorded. In addition, a richer than normal assemblage of post-medieval ordnance was recovered by metal detector survey from the excavated ploughsoil. This included eight musket balls and two small cannon balls. [Au(adp)]

GRAIN POWER STATION, ISLE OF GRAIN

Archaeological Evaluation (Auger Transects) Report on Grain Power Station, Isle of Grain, Kent

Pope, M Portslade : Archaeology South-East, 2007, 25pp, colour pls, figs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation by auger survey was undertaken in advance of construction. The auger survey did not provide any direct evidence for human activity at the site relating to occupation along the course of the "House Fleet". The alluvial sequence provided limited potential for investigation of human impact on the landscape due to possible contamination through groundwater movement. Made ground deposits overlying the site all appeared to have related to the post-war preparation of the ground for power station construction and presumably dated to the 1960s. Remains of boiler fragments, presumably obsolete equipment from the power station itself, were found to be present within this rubble and may have been of interest to industrial archaeologists. CHATHAM DOCKYARD INTERFACE LAND, CHATHAM***Chatham Dockyard Interface Land, Chatham, Kent. Archaeological Evaluation Report***

Ellis, C Salisbury : Wessex Archaeology, 2007, 94pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An evaluation was carried out within the boundaries of Chatham Historic Dockyard. Evidence of in situ archaeological remains dating from the Late Iron Age together with residual evidence for Neolithic and Bronze Age evidence was recovered, at the edge of a gravel terrace within the southeastern part of the site. Evidence for the Historic Dockyard was present in the form of timber and masonry structures dating to the late 18th and early 19th centuries. No earlier structural remains were found. The evaluation found discrepancies between the location of excavated features and those shown on the cartographic sources consulted, showing that there may have been errors in the historic mapping. Work undertaken by: Keevill Heritage Consultancy

An archaeological evaluation was carried out consisting of fourteen test pits excavated around the south-east corner and north-west side of the keep. They revealed a short stretch of the Roman city wall underlying (and acting as the foundation for) the west corner of the keep. The late 11th century rampart of the Norman castle, consisting of orange brown flinty gravel under the south curtain wall and chalk under the west curtain, a building probably of medieval date abutting the inner face of the Roman city wall immediately to the north-west of the keep, later medieval and post-medieval surfaces and features and dumped deposits mostly modern in origin and in some cases associated with past campaigns of repair were all identified. LAND AT BROOKLANDS, MILTON KEYNES
Land at Brooklands, Milton Keynes. Phase 1 Archaeological Evaluation Report

Sims, M Oxford : Oxford Archaeology, 2008, 88pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The evaluation was preceded by a geophysical survey and the results of the trenching works broadly confirmed these findings (where these surveys coincided). The trenching demonstrated that the Iron Age and Romano-British settlement activity was broadly confined within Area 1 and that the surrounding area contained mainly field systems, as predicted by the geophysics. In addition to this,

another focus of potential settlement activity of medieval date was found just to the north of Broughton Grounds Lane. This collection of pits and ditches sits on the edge of a gravel terrace associated with a tributary of the River Ouse to the west. This evidence indicated that this activity may have been more extensive across the terrace, into trenches 57 through 62, which were inaccessible due to the presence of cattle. [Au(abr)]

LAND AT NOVA MK1

Archaeological Evaluation of land at Nove MK1, Milton Keynes

Patenall, M Northampton : Northamptonshire Archaeology, 2007, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

An archaeological evaluation was carried out on land proposed for the development of a business park. The trial trenching revealed three Iron Age enclosures in two areas of the proposed development site including two overlapping sub-rectangular enclosures previously found during geophysical survey and a smaller isolated enclosure situated approximately 400m to the southeast. The pottery from the evaluation indicated that all three enclosures dated to the first half of the first century AD. The ditches of the two overlapping enclosures contained generally large unabraded pottery sherds indicating a nearby settlement. This was in contrast to the isolated enclosure, from which only a relatively small amount of smaller and more abraded sherds of pottery were recovered, suggesting that it was located away from the principal area of occupation and was possibly used to hold livestock. The remaining trenches were all devoid of archaeological deposits which confirmed the results of the geophysical survey. [Au(abr)]

Wilson, N Milton Keynes : Archaeological Services & Consultancy Ltd., 2007, 57pp, colour pls, figs, tabs ,refs

Work undertaken by: Archaeological Services & Consultancy Ltd.

Within the northern area a number of linear features interpreted as Roman field boundary ditches were encountered. Two pairs of parallel ditches orientated south-east to north-west were interpreted as a trackside ditches. A number of small Roman pits were also identified in this area. The only non-Roman feature identified was a small pit from which a number of sherds of early Saxon pottery were recovered. In the southern area, there was generally less archaeology. However, a crouched burial was uncovered in one of the trenches. Though no material to date the burial was found, this type of burial was generally associated with the prehistoric period and the Bronze Age in particular. It was possible that the burial was under a barrow mound, though no evidence for such a mound or surrounding ditch was seen during the evaluation. [Au(abr)]

SPIRIT MOTORS, SOUTHAM ROAD, BANBURY***Spirit Motors, Southam Road, Banbury, Oxfordshire. Archaeological Evaluation Report***

Sims, M Oxford : Oxford Archaeology, 2007, 22pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The evaluation revealed limited evidence of 17th- or 18th-century activity in the west of the site, possibly associated with a property shown on the Davis map of 1794. A similarly dated garden or cultivation soil was seen throughout the site, forming part of an open space behind the property. Evidence for a 19th-century structures behind a property on Southam Road, and an out building within a yard of a property fronting School Lane, were revealed in the west and centre of the site. Two 19th century boundary ditches with an entrance way were revealed in the east. The ditches most likely formed the eastern limit of the properties fronting School Lane, or the western extent of Castle Gardens. No evidence for any earlier activity was revealed and it appeared unlikely that the site was occupied prior to the 17th century. [Au(abr)]

Work undertaken by: John Moore Heritage Services

Twenty-four trenches were excavated revealing two palaeochannels and a three phases of human activity. A large number of ditches, pits and post holes were recorded. The majority of which were undated, but were considered to be contemporary with nearby Roman remains at Oxford Road which showed a similar sequence. [Au(abr)]

LAND SOUTH WEST OF BICESTER

Land South West of Bicester, Oxfordshire. Report on Stage 2 Archaeological Evaluation [Trial Trenches and Topographic Survey]

Clelland, S Salisbury : Wessex Archaeology, 2007, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

Following on from the first stage of evaluation on 2006 that located ten zones of archaeological activity [dating from the Early Bronze Age to post-medieval periods], a second stage was carried out targeting cropmarks, geophysical anomalies and areas of unknown potential. Of the 76 trenches opened, only five contained archaeological remains, all dating from the Roman period or later. This stage of evaluation did not alter the initial results of the previous stage, and confirmed the character of the site. A topographical survey was carried out in order to generate a surface model of the visibly extant earthworks. [Au(adp)]

UPPER HEYFORD FIELDWORK*Heyford Park, Upper Heyford, Oxfordshire, Evaluation Report*

Sims, M Oxford : Oxford Archaeology, 2007, A4, plastic spiral bound

Work undertaken by: Oxford Archaeology

February 2007. Oxford Archaeology carried out a field evaluation at Heyford Park, Upper Heyford. The evaluation revealed overall deposits of modern made ground sealing an earlier ploughsoil. In the two northern most trenches evidence for probable Iron Age ring ditches were exposed below this ploughsoil, and cut into the underlying natural. There was a good match between the magnetometer anomaly readings from a previous geophysical survey and features within the trenches. However, the anomalies were evenly split between modern services and archaeological features. [OASIS(Au)]

LINACRE COLLEGE***Archaeological Evaluation: Linacre College, Oxford***

Hunn, JR & Rouse, C Milton Keynes : Archaeological Services & Consultancy Ltd., 2007, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd.

An archaeological evaluation was carried out at the site, which lay within the floodplain of the River Cherwell on alluvium about 1m thick overlying fluvio-glacial gravels. The only sign of human intervention on the site was the presence of an alluvium filled ditch like feature on the edge of a dark organic layer. This was located in two of the trenches but was inexplicably missing from a middle trench suggesting its irregularity was more due to natural factors than human agency. From the fill of one ditch segment came an oyster shell and a small fragment of possible roof tile. [Au(adp)]

MUSIC ROOM EXTENSION, CORPUS CHRISTI COLLEGE***Music Room Extension, Corpus Christi College, Oxford. Archaeological Evaluation Report***

Bashford, R Oxford : Oxford Archaeology , 2007, 56pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

An evaluation was carried out on behalf of the college in advance of the submission of a planning application for the construction of a new teaching room. An east to west aligned inhumation was revealed, potentially associated with an early phase of St. Frideswide's Priory. A mortared stone structure, possibly representing the defensive line of the late Saxon burgh was also revealed, along with evidence for later development of the defensive circuit, including a localised re-build of the city wall in the early 17th century. Evidence for the rebuild of the boundary wall between Christ Church and Corpus Christi colleges was also revealed, although the date of this rebuild was unclear. Some evidence for 13th-14th century occupation was recovered from a possible refuse pit that may have been associated with properties fronting onto the former Shidyerd Street, although there was no evidence for the street itself. This may have been due to truncation by two post-medieval cess pits. The remainder of the archaeological data appeared to relate to the configuration of the college gardens from the 16th century onwards, including landscaping debris and a robber trench. [Au(adp)]

WOLVERCOTE PAPER MILL

Wolvercote Paper Mill, Oxford. Archaeological Evaluation Report

Mumford, J Oxford : Oxford Archaeology , 2007, 33pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The evaluation revealed a number of scattered archaeological features dating from the Iron Age to the present day. In the north of the site a Middle Iron Age post hole and oval pit were revealed. A natural stream course was revealed running north-west to south-east across the site. Medieval tile was recovered from its fills. Along the southern edge and south-east corner of the site, medieval and post-medieval ditches, post holes and pits were recorded. These features may have been associated with medieval and post-medieval properties fronting onto Mill Road, or earlier mills on the site. A millrace was located in the east of the site, which had been backfilled with material from the demolition of the 19th century mill, prior to the construction of the paper mill in 1953. [Au(abr)]

TOP FARM, HONEY LANE, HURLEY

Top Farm, Honey Lane, Hurley, Berkshire. An Archaeological Evaluation

Hallybone, C Hertford : Archaeological Solutions, 2007, A4 ring-bound document

Work undertaken by: Archaeological Solutions

During January and February 2007, Archaeological Solutions Ltd (AS) conducted an archaeological trial trench evaluation of land at Top Farm, Honey Lane, Hurley, Berkshire (NGR SU 8233 8172). The archaeological evaluation was commissioned by Michael Shanly Homes Ltd, in advance of proposed residential redevelopment of the site. The desk based assessment signifies that historically not much is known about Top Farm and its surrounding land. It is suspected that the farm was once associated with the manorial Hall Place which was the property of the Priory until its dissolution in 1540. Isolated finds of prehistoric flints have been found to the south-west of Top Farm and numerous Roman pottery sherds have been found in the vicinity. Post medieval farm expansion and change was thought to be located during the evaluation. The evaluation revealed evidence mainly of post medieval farm yard activity, although residual Romano-British finds were present indicating previous activity. The presence of Romano-British material is significant as presently no firm evidence of settlement in the vicinity exists for this period. The features identified included compacted chalk surfaces, pit/linears, posthols and a possible pond feature. The latter contained Roman pottery in the basal layer but corresponded to a pond which appeared on the Tithe Map of 1843. This pond also appeared on the 1913 OS map but is no longer extant. NEW COLLEGE, THE AVENUE, SOUTHAMPTON

New College, The Avenue, Southampton. Archaeological Evaluation Report

Oxford Archaeology Oxford : Oxford Archaeology, 2007, 41pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The evaluation comprised of 12 trenches totalling 240 m in length. Within Trench 12, located near to the south east corner of the site, a single undated pit (possibly of Iron Age/Roman date) was revealed containing evidence for smithing, probably derived from such activity nearby. A post hole from Trench 10 to the north-west of Trench 12 contained late Iron Age/early Roman pottery and fragments of burnt flint. Other features revealed by the evaluation including stake holes, post holes and plough scars were likely to relate to post-medieval activity, either when the site was agricultural land or from its development from the 19th century. MOTORWAY SERVICE AREA, COBHAM

An Archaeological Evaluation of the Proposed Motorway Service Area, Cobham, Surrey

Collie, TPortslade : Archaeology South-East, 2007, 32pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken at Motorway Service Area, Cobham. 32 trenches were excavated. The site itself was divided in half by the M25 motorway. The evaluation yielded very little archaeological evidence, a few trenches containing later Iron Age pottery in the south-western areas of the site. Some other trenches yielded post-medieval/modern archaeology of little or no significance. In the northern end of the site, post-medieval archaeology was discovered in the form of drainage ditches and gullies. [Au(abr)]

LAND AT NORTHEAST HORLEY

An Archaeological Evaluation on Land at Northeast Horley, Surrey

Margetts, A & Barber, L & Doherty, A & Allot, L Portsllade : Archaeology South-East, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A programme of archaeological works was undertaken on land at Northeast Horley in advance of redevelopment. A total of 34 trenches were excavated by machine across the site. A total of 24 features were recorded during the investigation, including ditches, occasional post holes and a wall footing. The investigation provided fairly limited evidence for multi-period activity at the site. This included Iron Age, late medieval and post medieval evidence. The majority of remains uncovered comprised ditches or gullies, a large number being similar in nature, and one of these could possibly be assigned an Iron Age date. Two removed field boundaries were also in evidence, one of which had a probable late medieval date assigned to its foundation as well as a late 19th century date for its decommission. Much slag was recovered from the south of the site and pointed towards a post-medieval blast furnace in the vicinity. Possible evidence of past cultivation was also encountered. [Au(abr)]

65 A and B High Street, Reigate, Surrey. An Archaeological Evaluation Report

Eddisford, D Twickenham : AOC Archaeology Group, 2007, 19pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was undertaken to assess the impact of a proposed development on any surviving archaeological remains. The evaluation comprised of the excavation of three trenches, one measuring 30.00m by 2.00m at base, one measuring 16m by 2.00m at base and one measuring 14.00m by 2.00m at base. Natural sands were identified in all trenches. No archaeological features pre-dating the 19th century were identified on the site. The site appeared to have been heavily truncated by sand quarrying in the 19th century, which removed any earlier features. [Au(abr)]

STEPSTILE MEADOW, FLANCHFORD ROAD, REIGATE

An Archaeological Evaluation at Stepstile Meadow, Flanchford Road, Reigate

Collie, T Portsllade : Archaeology South-East, 2007, 22pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was conducted in the gardens of a house at Stepstile Meadow. Five trenches were excavated, and truncated geology was encountered. No archaeology was encountered within sondages dug to a depth of 2.2-2.3metres. Similarly no archaeology was discovered in Trench 1, although an extensive layer of flint overlay the natural geological layers of sand and clay. However, the southern end of Trench Two yielded archaeological features and pottery of Late Iron Age/Early Roman date within a shallow hollow or depression, whilst a possible cut feature of this date was located in the central area of the trench. ROAKES AVENUE, CHERTSEY

Roakes Avenue, Chertsey, Surrey. An Archaeological Evaluation

Ford, S Reading: Thames Valley Archaeological Services, 2007, 17pp, colour pls, figs, tabs, refs

Work undertaken by: Thames Valley Archaeological Services

The archaeological potential of the site had been highlighted in a desk-based assessment. In summary, the site lay within a general topographic zone considered to be of high archaeological potential. Few finds were recorded for the environs except that a Bronze Age site had been recorded almost adjacent to the north-western part of the proposal area. Thirteen trenches were excavated, using a JCB-type machine fitted with a toothless ditching bucket under continuous archaeological supervision. The trenches ranged in length from 19.2m to 23.9m and were all 1.6m wide. The evaluation revealed a number of features cutting the natural geology on the site, most of which were linear features (ditches and gullies). However, the majority of these features were unambiguously of late post-medieval date (one gully was undated) and were probably field boundaries or associated with the previous use of the site as allotments. The exception was a small pit which was fully excavated and found to contain charcoal and a few minuscule fragments of burnt bone, but no artefactual dating evidence. It was possible that this feature was related to cremation burial but with the fill being no more than disposal of pyre debris rather than a cremation burial proper. The fragments of burnt bone were so few that inclusion in the fill of the feature by accident could not be discounted. Although this feature was undated, its nature and the maturity of the fill suggests that it was not the product of a relatively recent event and that it was of pre-medieval date. It was, however, the only feature of its kind from the site, with no other deposits or artefacts of pre-modern date recorded for any of the evaluation trenches. On balance the site as a whole was therefore considered to have very low archaeological potential. [Au(adp)]

Meaton, C Portslade : Archaeology South-East, 2007, 20pp, colour pls, figs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation was undertaken on four residential plots of land at 94-104 Stanstead Road. The site had gained outline planning consent for the erection of 24 new houses. It was bordered to the east, north and south by modern development, and to the west by agricultural fields. Nine trenches were excavated in the rear and front gardens of the current plots, and provided a total cumulative excavated length of 140m. Some post-medieval disturbance, in the form of garden landscaping was identified, as well as a number of modern archaeological features. Overall, the evaluation trenches were relatively devoid of significant archaeological content. [Au(abr)]

PROPOSED WELLSITE AT KINGS FARM, BLETCHINGLEY*Proposed Wellsite at Kings Farm, Bletchingley, Surrey. Results of an Archaeological Evaluation*

Cox, PW & Cottam, S Chicklade : AC archaeology , 2007, 13pp, colour pls, figs, tabs, refs, CD

Work undertaken by: AC archaeology

An archaeological evaluation by trial trenching was undertaken on farmland to the north of Birchen Coppice, Kings Farm, Bletchingley. The site comprised the proposed location of an appraisal oil well site. It lay close to an undated trapezoidal earthwork enclosure within Birchen Coppice and near another earthwork, possibly a moat, to the east. The evaluation comprised the machine excavation of eight trenches totalling c. 270m² in area and representing a 5% sample of the proposed well site (total area c 5400m²). The investigation identified a single undated gully and an ill-defined feature (possibly a tree throw) containing charcoal fragments. Two pieces of worked flint were recovered; a possible worked lump from topsoil and a broken late Mesolithic blade from the surface of the tree throw. No evidence was present to assist with the dating or function of the enclosure in Birchen Coppice. The evaluation confirmed that the site had some limited archaeological potential for the presence of prehistoric activity. [Au]

Land Adjacent to Sun Inn, Godalming, Surrey, an Archaeological Evaluation Report

Clarke, C Twickenham : AOC Archaeology Group, 2007, 18pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was undertaken on land adjacent to the Sun Inn, Godalming. The aim of the evaluation was to assess the impact of a proposed redevelopment on any surviving archaeological remains. The evaluation comprised of a single machine excavated trench, measuring 10m by 2m. The trench revealed that natural sand deposits had been horizontally truncated by the construction of a modern building during the mid 20th century, and had removed the potential for archaeological deposits to survive on site. The modern building had been subsequently demolished to make way for car parking facilities. No finds or features of archaeological significance were observed during the course of the evaluation. Work undertaken by: Thames Valley Archaeological Services
 The evaluation was successful in locating Roman deposits, some of which appeared to represent a large ditch. No positive trace of the known nearby Roman road surface itself was recorded although in some of the trenches the gravel was disturbed and discoloured.
 Regardless of whether the features represented the road and associated ditch the evaluation indicated the presence of Roman occupation evidence. The cut features were well defined and in the case of the features in Trench 1, contained a substantial assemblage of pottery. The fieldwork illustrated that the development site had high archaeological potential. [Au(abr)]

WICKHAM HOUSE, WICKHAM***Wickham House Walled Garden, Wickham, West Berkshire. An Archaeological Evaluation***

Pine, J Reading: Thames Valley Archaeological Services, 2007, A4 comb-bound client report

Work undertaken by: Thames Valley Archaeological Services

An evaluation was carried out to provide information for a planning application to build a new swimming pool, pavilion and gazebo in the empty walled garden at Wickham House. The potential arose because the site lies just south of the projected course of Ermin Street, and there are a number of Roman finds from the area. Three evaluation trenches all revealed Roman ditches, with one pit. The site's location, close to Ermin Street, presumably represents a small roadside settlement. Pottery, including some imports, suggests a date range from the 2nd to 4th centuries AD. [OASIS(Au)]

Hart, D Portslade : Archaeology South-East, 2008, 46pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

A total of three machine excavated trenches and a single geoarchaeological test pit were excavated across the site. Natural gravel was encountered at a maximum height of 5.37m AOD in the southwest (Trench 3), falling away to 0.99m AOD to the northeast, where a sequence of alluvial silts associated with the Adur river was seen to cap the gravels to a height of 1.99m AOD. Two small irregular pits were identified during the trial trenching, both of which exhibited evidence of post-depositional disturbance from rooting. A small quantity of struck flint was recovered from one of these features but was not considered to be diagnostic of any period. The geoarchaeological test pit succeeded in identifying a Raised Beach deposit on the site, thought to represent a continuation of the Pagham formation. [Au(abr)]

An Archaeological Evaluation Report at Boundstone Community College, Upper Boundstone Lane, Lancing, West Sussex

Swift, D & Hart, D Portslade : Archaeology South-East, 2007, 47pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological evaluation of land at Boundstone Community College was undertaken in advance of the determination of a planning application for the redevelopment of the site. Additionally, a supervised, small scale training excavation was undertaken by students of the college. For the purposes of the evaluation, two small hand excavated test pits, five large trenches and a geoarchaeological trench were excavated. During the training excavation a further ten test pits were hand excavated and recorded by students. The excavations brought to light evidence of prehistoric and 18th, 19th and 20th century activity at the site. This was largely in the form of residual finds within the topsoil, plough scarring or occasional recent intrusions. No significant archaeological features were recorded. [Au(abr)]

Evans, G & Valler, H Salisbury : Wessex Archaeology, 2007, 62pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation was carried out on an area suspected to contain archaeological deposits relating to structural evidence for the occupation of the site in the medieval period. A levelling event was found to have occurred over most of the site in the 16th/17th centuries, sealing medieval soil and the remains of a probable property boundary ditch. Later demolition deposits overlay this layer. Of note towards the rear of the property was evidence for prehistoric activity in the form of a number of undiagnostic redeposited struck flint flakes from within an extensive colluvial clay deposit as well as a sherd of Bronze Age pottery. WESTMORELAND HOUSE, ASHLEY ROAD, STOKES CROFT, BRISTOL

Archaeological Evaluation at Westmoreland House, Ashley Road, Stokes Croft, Bristol

Ducker, R K Bristol : Avon Archaeological Unit, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Avon Archaeological Unit

Three ditches were located which corresponded to the layout and location of 17th century Civil War defensive ditches that were suggested, from contemporary accounts, to have been built at Stokes Croft. The layout of the defences appeared to have determined the pattern of subsequent boundaries and buildings on the site. Artefacts recovered from the primary soils filling the ditches dated from the late 17th to the early 18th centuries. In two of the trenches, the ditch segments had subsequently been used as a foundation for stone walls during the later 18th century. A number of 18th century and later walls were located in each of the trenches, some of which could be related to the outline of structures on historic maps and partly to those still standing in the study area. Walls in Trenches 1 and 2, for example, can be related to 19th century maps and plans as structures corresponding to the fossilised outline of the civil war defences. Two further walls in Trench Two could neither be dated, nor clearly associated with adjacent structures. Further structures in Trench Two, a cistern and a number of floor surfaces, represented elements of residential buildings adjoining the rear of No. 4 Ashley road. In Trench Three, Wall 307 appeared to be part of the suggested remains of the west wall of the east wing of the 19th century carriage-works. Based on the available evidence it was likely that the earliest ditches located in the trenches dated from the second half of the 17th century. In terms of dating alone they could therefore have represented features associated with the Civil War defences laid out in the Stokes Croft area. This interpretation was supported by their collective layout, which corresponded well with the footprint of the military Spurwork and adjoining defence lines suggested by other commentators. It should be noted however, that no finds of military type or of definite mid 17th century date were recovered from any of the trenches and it was possible that their original function could have been for agricultural or other non-military purposes. If the 17th to 18th century features and deposits located on the site were indeed of Civil War origin then they were potentially of both local and regional significance and have the potential to further elucidate the form, development and extent of the Civil War defences as well as the subsequent historic urban settlement and development of Stokes Croft. PLOT 9, CABOT PARK (II)***Plot 9, Cabot Park, Avonmouth. City of Bristol. A report on the geoarchaeological borehole survey***

Corcoran, J London : Museum of London Archaeology Service, 2007, 50pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The site had previously been evaluated in 1998 which defined possible occupation surfaces of charcoal rich clays associated with small quantities of burnt stone, animal bone and prehistoric pottery between palaeochannels. Further work ensued with a geophysical survey carried out in 2006, identifying a network of possible palaeochannels. Subsequently, in May 2007, c 50m of the 1998 evaluation trench

was re-excavated in order to examine the previously observed archaeological evidence, which lay at c 5m OD. The prehistoric pottery from the occupation layer was dated to the Late Bronze Age/Early Iron Age, based on similarities with local assemblages. This was consistent with radiocarbon dates on charcoal from two possible hearth areas, which produced dates of 1120-910BC and 780-410 BC. Three further trenches were excavated at the northern end of the 1998 trench and these located a band of black clay between 4.28m and 4.56m OD. This deposit, sometimes known as the "BARAS layer" or N-horizon, had elsewhere been dated to 3700-2200 BC (Neolithic period). A transect of seven Terrier Rig boreholes were drilled and core samples recovered and examined on-site, as a further stage of the archaeological evaluation of Plot 9. The purpose was to determine the extent of the horizons of archaeological interest within the area of proposed building construction. The work was carried out in June 2007. The borehole survey demonstrated that the gleyed occupation layer extended into the building footprint and could also be identified in the palaeochannel, whereas the BARAS layer extended across the entire area examined, apart from the palaeochannel. The evaluation concluded that the development would have an impact on archaeological remains of local to regional significance relating to the Neolithic to Iron Age periods. Following consultation an appropriate mitigation strategy for these remains was recommended. This involved generalised preservation, where not affected by piling, and analysis of the cores from the geoarchaeological borehole survey to provide additional data on the deposits of archaeological interest. This report summarises the results of the borehole survey and evaluates the potential of the core samples obtained for further analysis. Examination of the borehole samples has provided preliminary information about the changing prehistoric and historic environment represented by the alluvial deposits at Cabot Park. The main potential of the core samples lies in the opportunity they provide to examine deposits at far greater depth than is usually possible in archaeological trenches. These deposits relate to the Mesolithic and Neolithic environment of the Levels and contribute to the understanding of landscape and human activity within these periods. The full depth of Holocene deposits was not proved. However, the 7m deep boreholes have demonstrated that, prior to the development of the saltmarsh in which the prehistoric archaeology was found, there was a more active coastal environment. PLOT 9, CABOT PARK, AVONMOUTH, BRISTOL

Plot 9, Cabot Park, Avonmouth, City of Bristol. An Archaeological Evaluation Report

Museum of London Archaeology Service London : Museum of London Archaeology Service, 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The evaluation recorded the presence of a band of organic clay [sometimes known as the BARAS layer or N-horizon] dated to 3700-2200 BC in all three trenches. This helped to refine the assessment of the archaeological potential of the site, and it was concluded that the development would have an impact on archaeological remains of local-regional significance relating to the Neolithic and Bronze Age periods. An appropriate mitigation strategy was recommended. [Au(adp)]

BROADMEAD EXPANSION. QUAKER FRIARS

Broadmead Expansion, Bristol. Quaker Friars. Archaeological Evaluation and Building Recording

Harvard, T Cirencester : Cotswold Archaeology, 2007, 75pp, colour pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd., Cotswold Archaeology

The investigations identified evidence for dumping and raising of ground levels from the medieval period onward, together with evidence for the original construction, use and alterations to the complex of buildings now known as Quaker Friars. Of particular note were structures relating to the original construction and later alterations to the east end of Cutlers Hall, part of the Greater Cloister of the 13th century Dominican Friary, a covered cloistral walk or passage around the east side of the Lesser Cloister, and possible evidence of a former building or buildings relating to a former east range of the Lesser Cloister, one of which may have been partly incorporate in to the later Quaker Meeting House. Evidence for further ground raising and construction of floor surfaces related to the Quaker redevelopment of the site, including the 1747 Meeting house, the Cottage and contemporary alterations to floor levels within Bakers Hall were also encountered. LAND BETWEEN HIGH STREET AND BRIDGE STREET, CASTLE PARK, BRISTOL

Archaeological Evaluation of land between High Street and Bridge Street, Castle Park, Bristol

Whatley, S Bristol : Bristol & Region Archaeological Services, 2007, 35pp, colour pls, figs, tabs, refs

Work undertaken by: Bristol & Region Archaeological Services

The fieldwork revealed that extensive cellaring of the site had taken place up to the 1930s. A 19th century Pennant floor surface was found cut into the natural clay. The majority of the cellars dated from the late 18th century but there were a few wall foundations, deposits and pits dating from the medieval period. The remains of a medieval barrel vaulted cellar was uncovered containing later post-medieval and early modern walls. [Au(adp)]

REDCLIFF WHARF

Redcliff Wharf, Bristol. Archaeological Evaluation, Phase 2

Collard, M Cirencester : Cotswold Archaeology, 2007, 57pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

Evidence for land reclamation was recorded along the waterfront, taking place from at least the 18th century. Further evidence for glass working was recorded. A fragment of high temperature flue with vitrified surfaces from glass working, previously recorded in an 1989 investigations, was re-exposed. Deposits contained considerable quantities of glass working waste were recovered, often in association

with deposits of primary waste, including kiln furniture, from the manufacture of tin-glazed earthenware and stoneware; these derived from a 18th century pottery manufactory, which must have been in close proximity to the site. The platform and some floor surfaces of a 19th century warehouse and counting house, and part of a residential dwelling were recorded. [Au(abr)]

114 JACOB STREET, OLD MARKET

114 Jacob Street, Old Market, Bristol. Archaeological Evaluation

Cullen, K Cirencester : Cotswold Archaeology , 2007, 13pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

Two trenches were excavated within the development area. A similar sequence was identified in both trenches, primarily red sand overlain by garden soils which had been subsequently disturbed by the construction of the existing building which originated as an 18th/19th century malthouse and/or brewery. The internal walls appear to have been removed and the flagstone floor replaced by the current concrete floor slab. The presence of a heavily truncated sandstone wall towards the southern edge of the site may have suggested that earlier, potentially medieval structures, once stood on the Jacob Street frontage of the site. LAND TO THE SOUTH OF PORTWALL LANE

Land to the South of Portwall Lane, Bristol. Archaeological Evaluation

Evans, D & Saunders, K Cirencester : Cotswold Archaeology , 2007, 24pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

A two-phase archaeological evaluation excavated a total of four trenches within the proposed new footpath in order to locate the remains of the 13th century Portwall. Neither the Portwall nor evidence for its removal were recorded during the evaluation. A late 13th to 14th century clay deposit probably represented part of the berm (an artificial earthen bank built against the wall's outer face) indicating that the Portwall lies to the north of the evaluation trenches. A series of late post-medieval/modern structures were also recorded, these related to the buildings portrayed on 19th and 20th century maps of the area. [Au(abr)]

LELLIZZICK, NEAR PADSTOW*Lellizzick, near Padstow, Cornwall. Archaeological Evaluation and Assessment of Results*

Wessex Archaeology Salisbury : Wessex Archaeology, 2008, 48pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation was undertaken by Channel 4's "Time Team" at a site in Lellizzick near Padstow to investigate a series of circular anomalies identified by aerial photography and geophysical survey following extensive metal detecting. The aim of the evaluation was to investigate the nature of these anomalies and ascertain their date, character, condition and extent. The project was successful in identifying a roundhouse settlement dating from Romano-British through into the post-Roman period, with evidence of occupation over perhaps five or six centuries, although no definitive evidence for pre-Roman settlement was found. Investigation of the architectural details of the roundhouses indicated a Bronze Age building technique observed on other Cornish sites being utilised well into the Romano-British period. The settlement appears always to have been relatively small, with new roundhouses replacing old repeatedly. Some evidence of industrial activity was recovered, as well as evidence for possible connections with the Byzantine world. The results of the excavation were limited, but the evidence for Roman activity is of significance as belonging to a period which has as yet received little attention in the south-west. A summary publication of the results was recommended. [Au(abr)]

Best, J Exeter : Exeter Archaeology, 2007, 20pp, tabs, refs

Work undertaken by: Exeter Archaeology

An archaeological evaluation was carried out during December 2006 and January 2007. The evaluation was the first stage in a programme of archaeological works, following a geophysical survey that identified anomalies of possible archaeological origin throughout the site. Evaluation was undertaken in two fields (North and South Fields) and comprised nine machine-excavated trenches and two hand-dug trenches. The work revealed a number of archaeological features, dating from the medieval and post-medieval periods. These were predominately field boundaries, but also included a former hollow way. The proximity of a small rural settlement was also suggested by a finds of 11th-15th century pottery. A small number of residual worked flints were also recovered from later features and modern agricultural deposits. No settlement evidence was found within the site. [Au(abr)]

LAND TO THE REAR OF 137 AND 137A COWICK STREET, ST. THOMAS, EXETER

Archaeological Evaluation of land to the rear of 137 & 137A Cowick Street, St. Thomas, Exeter

Steinmetzer, M F R Exeter : Exeter Archaeology, 2007, 15pp, figs, tabs, refs

Work undertaken by: Exeter Archaeology

The evaluation comprised the machine-excavation of five trenches. A linear ditch extended back from the street frontage in the western part of the site. This could conceivably have represented an early, possibly medieval, plot division, although no finds were recovered from its fill. A possible pit and a shallow trench were also uncovered to the immediate rear of 137A and 137 Cowick Street, with finds recovered from these features dating to the second half of the 18th century. No finds pre-dating the post-medieval period were recovered. The redevelopment of the site was deemed unlikely to impact on significant archaeological deposits pre-dating the post-medieval period [Au(abr)]

An Archaeological Evaluation of the Lower R.N.S.D. and S.E.F. Sites, Topsham Road, Exeter, Devon

Gilbert, D Beckley : John Moore Heritage Services, 2007, 69pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

Fifty-eight trenches were excavated. Numerous undated ditches, pits and post holes were recorded across the site. Prehistoric activity was represented by two Neolithic to Bronze Age ditches and a sparse scatter of flint. Remnants of a possible Roman field system adjacent to the line of the Roman road were recorded. Other ditches probably associate with medieval and later field systems were also excavated including some features that appeared to correspond to a boundary marked on the 1840s tithe map. The investigation of a previously identified lynchet revealed it to be nothing more than modern landscaping. [Au(abr)]

OLD RYDON LANE AND LANGDON SITE, SOUTH EXETER

An Archaeological Evaluation of ORLN Site and Langdon Site, South Exeter, Devon

Gilbert, D Beckley : John Moore Heritage Services, 2007, 33pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

Twenty-five trenches, totalling approximately 780 metres in length, were excavated to reveal the underlying natural geology. A standing crop in the west field prevented evaluation of this area. Known prehistoric activity recorded to the east was seen to extend into this area. A continuation of known ditch was recorded. Other features including ditches, pits and post holes, although undated, probably were from this period. An apparent field system located by geophysical survey appeared to extend into the area and possibly predated 1765. The results of this geophysical survey were also investigated. Anomalies examined proved to be pits containing burnt stone. Also located were a ring ditch and an undated buried land surface. [Au(abr)]

Archaeological Evaluation of the Upper Site, Former Royal Naval Supply Depot, Old Rydon Lane

Steinmetzer, M F R & Gent, T & Tyler, K Exeter : Exeter Archaeology, 2007, 17pp, figs, tabs, refs

Work undertaken by: Exeter Archaeology

An archaeological evaluation was carried out, revealed landscaping associated with the construction of a stores depot. Despite the substantial landscaping, the survival of archaeological features was generally good. Probable prehistoric archaeological features were present in a number of trenches. In the north-west corner there was a post-pit alignment dated to the early Neolithic period, as well as three curvilinear ditches that may have represented circular hut structures or ring ditches of former barrows. Also present were a number of other linear ditches and gullies associated with either settlement or formalised field/plot divisions. In the south-west corner a ditch containing a large part of a Middle Bronze Age pottery vessel was present, as well as adjacent pits and linear features. The only other finds recovered from the site was a small quantity of prehistoric worked flint. More localised probable prehistoric features were present elsewhere across the site, with these mainly comprising linear features. One ditch could be dated to the post-medieval period. Despite its previous land-use, the evaluation established that the site contained generally good survival of prehistoric archaeological features. [Au(abr)]

LAND AT TIVERTON PARKWAY RAILWAY STATION, SAMPFORD PEVERELL***Archaeological Assessment of Land at Tiverton Parkway Railway Station, Sampford Peverell***

Errington, L Exeter : Exeter Archaeology , 2007, 8pp, refs

Work undertaken by: Exeter Archaeology

An archaeological evaluation was undertaken. Twenty-four sites of archaeological interest were identified in the vicinity of Area A, including a former field boundary and embankment, and Area B, a former drainage irrigation channel. These were mainly landscape and water management features. Because both areas occupied part of a low-lying valley bottom, the main potential for archaeological remains was in the form of palaeoenvironmental deposits which may have contained organic remains (e.g. pollen) preserved in waterlogged and anaerobic conditions. The high proportion of sluices in the area might suggest a simple water meadow system was in place on either side of the Spratford Stream. The overall potential impact on the archaeology of the two sites was considered to be relatively low. However, limited archaeological mitigation was suggested in the form of a watching brief during any future ground reduction works to assess the palaeoenvironmental potential, and to record any previously unidentified deposits or features. AMORY HOUSE, 125 EAST STREET, SOUTH MOLTON

An Archaeological Evaluation at Amory House, 125 East Street, South Molton, Devon

West, A Exeter : Exeter Archaeology, 2007, 6pp, tabs, refs

Work undertaken by: Exeter Archaeology

The evaluation established that to the rear of Amory House there appeared to be no archaeological activity pre-dating the post-medieval period. The features that were identified included foundations for a garden wall or former outbuilding/extension, a possible property boundary ditch, a small post hole and a probable pit. The finds recovered from some of these features indicated that this activity dated principally to the 18th and 19th centuries. There was no evidence on the site for rubbish pits or industrial activity that might have been associated with the earlier history of the site. Based on the results of the evaluation, it was deemed unlikely that groundwork associated with the new extension would impact on any hitherto unknown significant archaeological deposits. [Au(abr)]

MASONS YARD, FORE STREET, HOLBETON

An Archaeological Evaluation at Masons Yard, Fore Street, Holbeton

Swindin, P Exeter : Exeter Archaeology, 2007, 10pp, figs, tabs, refs

Work undertaken by: Exeter Archaeology

The evaluation revealed the presence of localised activity of medieval date in the form of a linear ditch. Two other ditches yielded no artefactual material. The lack of dating evidence generally from the site was disappointing and the only medieval finds were from a ditch which was aligned north south and could not be associated with the existing plot layout. Three small post holes identified in one of the trenches appeared to be relatively modern in date. The presence of a modern metal fragment and the survival of timber in a non-waterlogged environment in one of the post holes suggested that the post holes derived from activity within the last century. BUCKFASTLEIGH

Archaeological Assessment of the South-west Water Buckfastleigh Trunk Main

Neophytou, M Exeter : Exeter Archaeology, 2007, 11pp, tabs, refs

Work undertaken by: Exeter Archaeology

An archaeological evaluation was undertaken on the route of a proposed pipeline. It determined that the pipeline would disturb a number of archaeological sites, some of which had the potential to represent medieval or possible prehistoric features. The potential also existed for the exposure of palaeoenvironmental deposits, either preserved beneath boundary features, within infilled boundary ditches or as part of anaerobic alluvial deposits. It was therefore recommended that an archaeological watching brief was maintained during the ground works in order to identify and record any archaeological exposure and to recover any artefacts or ecofacts that may have assisted in the dating or interpretation of those features. GREENHILL PRIMARY SCHOOL, MORETONHAMPSTEAD

Archaeological Evaluation of the Annexe of Greenhill Primary School, Moretonhampstead

Best, J & Manning, P Exeter : Exeter Archaeology, 2007, 11pp, figs, tabs, refs

Work undertaken by: Exeter Archaeology

An archaeological evaluation by means of trench excavation was undertaken on land at the annexe of Greenhill School, Moretonhampstead. The work comprised the machine-excavation of three trenches. Early maps of the site dating to the late 18th and early 19th centuries show buildings on the site, which were also present on an early 20th century photograph of the town. The buildings had been removed by the mid-20th century. Its position on the roadside adjacent to a churchyard suggested that the site may well have been occupied since the medieval period. The layer sequence recorded and absence of building remains within the trenches indicated that much of the site had been cleared and levelled, possibly as part of the construction of the current school buildings in 1961. A probable modern pit and an undated possible ditch were the only archaeological features present. [Au(abr)]

Archaeological Assessment of the Proposed Redevelopment at Wolborough Street, Bank Street and East Street, Newton Abbot, Devon

Gent, T H & Leverett, M Exeter : Exeter Archaeology, 2007, 26pp, tabs, refs

Work undertaken by: Exeter Archaeology

Eleven trenches were excavated to determine the survival, extent and date of archaeological deposits within Bank Street, East Street and Wolborough. A further nine trenches were recorded as a watching brief. Previous excavations within the development area had demonstrated a high potential for the survival of archaeological deposits in the town, while the deposit sequence was not found to be particularly deep along either side of Wolborough Street. Medieval and later deposits were relatively well-preserved. The evaluation revealed that archaeological deposits within the proposed development area had been heavily truncated by modern road building activity and the insertion of services. [Au(abr)]

LAND AT GRENVILLE COLLEGE, MORETON HOUSE, BIDEFORD

Archaeological Assessment of Land at Grenville College (Moreton House) Bideford

Stephens, G Exeter : Exeter Archaeology , 2007, 12pp, refs

Work undertaken by: Exeter Archaeology

There was evidence for prehistoric activity in the general vicinity of the development site in the form of a possible ring-ditch. In addition there were 19th century records of earthworks at and near Daddon, although the precise locations of these sites were uncertain. Sites of interest within the proposed development area included a possible dwelling of 19th century or earlier date, 19th century agricultural buildings, a trackway of 18th century or earlier date, and a building visible on a 1946 aerial photograph. Quarries to the north of the site indicated the extraction of stone in the vicinity and evidence of other such workings could be found within the site area, evidence of former field boundaries and landscape features, such as tree enclosures, were expected. As this appeared to have been marginal land, which was probably not cultivated in the medieval period, such boundary features were most likely to be of post-medieval or later origin. There were a number of slight undulations and surface anomalies within the site, many of which could have related to the sites of former trees. [Au(abr)]

Archaeological Evaluation of Land to the Rear of Palmer House and Nos. 10 and 12 New Street, Great Torrington, Devon

Leveret, M Exeter : Exeter Archaeology, 2007, 10pp, tabs, refs

Work undertaken by: Exeter Archaeology

An archaeological evaluation was undertaken on land to the rear of Palmer House, and numbers 10 and 12 New Street. Eight trenches were excavated, three within a walled garden to the north of Palmer House, and five within the area to the west, formerly occupied, in part, by a 19th-century glove factory. The evaluation revealed a number of features of post-medieval date. Within the walled garden area to Palmer House, these related to drainage. No structural remains or garden features were recorded. Walls and surfaces of 18th/19th-century date, and a culvert of early post-medieval date were exposed within the area to the west. A collection of former property boundary features were also recorded in this area. The earliest of these features, a ditch, was of medieval date. No other medieval or earlier features were recorded within the site. [Au(abr)]

DEEP MOOR LANDFILL SITE, HIGH BULLEN, TORRINGTON
Deep Moor Landfill Site, High Bullen, Torrington, Devon. Evaluation Report

Wessex Archaeology Salisbury : Wessex Archaeology, 2007,

Work undertaken by: Wessex Archaeology

Wessex Archaeology carried out an evaluation on the site of a proposed In Vessel Composting facility. Nine trenches were excavated, in seven of which a roughly north - south aligned trackway, previously identified as a crop mark on aerial photographs, was recorded. The western ditch of the trackway continued as an extant earthwork to the north of the excavation area. The trackway is thought to have been a ride linking Stevenstone House Park with kennels identified on 19th-century Ordnance Survey maps. A number of land drains and evidence of short-lived ploughing were identified. [OASIS(Au)]

Wytch Farm Proposed Pipelines and Cables: Results of Archaeological Evaluation by Trial Trenching between Wellsites B and D (Centred on NGR SY990855)

Cox, P Chicklade : AC archaeology, 2007, 24pp, colour pls, figs, tabs, refs, CD

Work undertaken by: AC archaeology

A total of 13 trial trenches were excavated at various locations along the route of the proposed new pipelines and cables. All trench positions had been chosen to investigate magnetic anomalies identified by gradiometer (magnetometer) survey, although several trench locations were altered to avoid possible buried ordnance. At two locations, West of Wytch Moor and East of Wytch Moor, trenches revealed deep soil build up and deposits of ash and/or burnt clay that suggested that significant burning had taken place in the immediate vicinity. Both locations were considered to have been used for salt-working in the middle ages, the latter having been identified and examined during the previous oilfield development in 1987. A small quantity of medieval pottery was recovered at each location. No other archaeological activity was identified although a moderate quantity of post-medieval pottery was recovered west of Wytch Moor. [Au]

BURNGATE PEARCE'S QUARRY, LANGTON MATRAVERS

Burngate Pearce's Quarry, Langton Matravers

Bellamy, P Dorchester : The Dorset Natural History and Archaeological Society, 2008, 1p
Work undertaken by: Terrain Archaeology

A rapid assessment and recording was carried out of the surviving remains at the former quarry known as Burngate Pearce's, Langton Matravers, Purbeck. This was undertaken in advance of the proposed development of the site for a stone work training centre by the Purbeck Keystone Project. The quarry was opened between 1841 and 1887 and comprised a single mine shaft with a group of five buildings surrounding the open space. The quarry went out of use some time before 1928. The site was subsequently adapted for agricultural use. Parts of three stone buildings survive and their crude construction was typical of quarry buildings of the late 19th century . They incorporated a number of stones with wedge-pits and other marks of former quarry working methods. A number of buildings around the head of the shaft and the capstan were no longer extant so it was far from a complete example of a Purbeck quarry. [Sec(adp)]

WORTH MATRAVERS, DOWNS QUARRY***Worth Matravers, Downs Quarry***

Tatler, S Dorchester : The Dorset Natural History and Archaeological Society, 2008, 1p

Work undertaken by: Terrain Archaeology

An archaeological evaluation was carried out of the proposed site of a new quarry at Downs Quarry to the west of Langton Matravers. Six trenches were excavated in two fields and this was the site of the Late Iron Age and Roman settlement and industrial site known as Gallows Gore West, which was

investigated during quarrying activity in the 1930s and 1940s. No archaeology survived as nearly all was disturbed by former quarrying activity, except for the northern end of the north field. At the northern end of the site the remains of two drystone walls were found. These walls were associated with scatters of stone rubble and burnt stone, which included a small amount of abraded Late Iron Age pottery. These walls were probably the remains of field walls, or perhaps part of an enclosure around the Iron Age/Roman site of Gallows Gore West. [Sec(adp)]

LAND TO THE REAR OF HARPER HOUSE, SHERBOURNE SCHOOL, HOUND STREET***Land to the Rear of Harper House, Sherbourne School, Hound Street, Dorset. An Archaeological Field Evaluation***

Slator, J Wincanton : Context One Archaeological Services, 2007, 23pp, figs, tabs, refs

Work undertaken by: Context One Archaeological Services

Across the area of the proposed new tutor's house, the existing tarmac layers covered a buried topsoil/ploughsoil, and a thick deposit of imported/landscaped soil. At the base of the soil horizons in Trench Three, the possible remains of an east to west aligned wall footing were encountered, which was cut by a probable post hole of unknown date. There was no evidence of the formalised pathway identified on the 1887 Ordnance Survey map. Excavation of Trench Four in the proposed new play area revealed evidence of a formalised path that could be seen on the 1887 map. Deliberately laid hamstone fragments were observed along the southern and eastern trench edges and probably represent the southern border of the north-east to south-west orientated path and its north-west to south-east return. An east to west aligned path was observed at the southern end of Trench Five. [Au(abr)]

PROPOSED NEW RESERVOIR AT GOULD'S HILL, WINTERBOURNE ST. MARTIN***Proposed New Reservoir at Gould's Hill, Winterbourne St. Martin, Dorset (NGR SY658866): Results of Archaeological Evaluation by Trial Trenching***

Cox, P & Robinson, S Chicklade : AC archaeology , 2007, 16pp, colour pls, tabs, refs, CD

Work undertaken by: AC archaeology

An archaeological evaluation by trial trenching targeted a number of magnetic anomalies of potential archaeological origin identified by geophysical survey along with a number of control trenches in "blank" magnetic areas. The results revealed that most features were either of natural periglacial origin or resulted from modern disturbance, possibly associated with the construction of the telecommunications facility. A large subsoil feature to the east, in Trenches 10/11, may have been of archaeological origin, but could have been a natural hollow that was being infilled during the prehistoric period. Overall, there seemed to be a low potential for significant archaeological remains in the proposed development area associated with the known prehistoric barrows. [Au(abr)]

COBERLEY VILLA

Coberley Villa, Coberley, Gloucestershire. Archaeological Evaluation and Assessment of Results

Milward, J Salisbury : Wessex Archaeology, 2008, 53pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

Eleven trenches were excavated to investigate the extent, character and condition of the Coberley villa remains. The trenches targeted a mosaic pavement discovered by metal detectorists in 2003 and structural remains indicated by geophysical surveying were shown to exist in the vicinity of the mosaic. The remains of a demolished villa were recorded which appeared to have been H shaped in plan. The evidence suggested that the north and south wings were possibly later additions to an original structure. The mosaic pavement appeared to be within a triclinium

. The central panel had been removed, possibly evidence of Christian iconoclastic destruction. Dating evidence from the site suggested that the villa was constructed in the 2nd century AD, the mosaic dated on stylistic grounds to the late 2nd to early 3rd

century. There was no firm evidence for the abandonment of the villa, but the presence of a little 4th century pottery, and several mid to late

century coins, indicated use of the site well into the late Roman period, although all this evidence came from post-demolition contexts. Geophysics also located evidence of industrial activity on the site. One of the geophysical anomalies was excavated and transpired to be a partly demolished kiln, the stone-built, subterranean element of which was still preserved in situ.

The kiln was probably producing roof tile for the villa construction. [Au(abr)]

 The evaluation revealed four ditches and a small pit concentrated in the northern part of the site. One
 area appeared to form part of a Roman enclosure system similar to others recorded in the area, and
 contained a small quantity of badly abraded Roman pottery. More clearly defined, larger ditches
 contained medieval pottery and were thought to form part of a later medieval burgage plot boundary.
 Other pottery sherds were recovered and dated from the Late Iron Age to modern periods. [Au(adp)]

Work undertaken by: Gloucestershire County Council Archaeology Service

The evaluation revealed five shallow cut features within the excavated area. Trenches 1 and 2 were undated, however, it was thought that a ditch was dated to the Late Iron Age, possibly casting an interpretation on the whole site as features and enclosures of an Iron Age settlement site. It was also possible that the site was representative of Saxo-Norman activity associated with the nearby church, given the presence of pottery from these dates. [Au(adp)]

ST. WHITE'S FARM, CINDERFORD***St. White's Farm, Cinderford, Gloucestershire. Archaeological Evaluation Report***

Teague, S Oxford : Oxford Archaeology, 2007, 40pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

An evaluation was carried out in advance of proposals to develop the site for housing. Thirty-four evaluation trenches were excavated. Trench 5 produced substantial evidence for iron production and primary smithying dated to the 12th- 13th centuries which was likely to have been associated with the recorded medieval occupation focused upon the chapel of St. White. Platform earthworks noted adjacent to the trench were likely to be associated with these remains. A hollow way recorded in Trench 4 also appeared to have provided the access to this settlement and strongly suggested that the focus of any earlier buildings was upon the current location of St White's Farm. A localised dump of slag was also encountered within Trenches 25 and 26 although a colluvial soil horizon sealing this suggested an early post-medieval date. No other significant archaeological remains were encountered. Suggestions that extensive scowles existed within the site boundary appeared to reflect undulations between the solid geological strata infilled with softer deposits rather than quarries. [Au(abr)]

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

The earliest deposits recorded by the evaluation was a garden soil containing 15th to 18th century pottery, in turn sealed by made ground containing 19th to 20th century pottery. Residual Roman pottery was also noted. The site was thought to have been part of a row of 12-18th century cottages. None of the deposits were thought to merit in situ preservation or further investigation. However, it was thought possible that more significant deposits may have survived at a greater depth. Barratt, R Gloucester : Gloucestershire County Council Archaeology Service, 2007, 15pp, colour pls, figs, tabs, refs

Work undertaken by: Gloucestershire County Council Archaeology Service

A total of twenty archaeological features were recorded, and comprised ditches, ditch terminals, pits and post holes. Only one ditch produced dating evidence, suggesting it was from the Roman period. However, it was deduced that many if not all of these features could have been contemporary, given their alignment. They were thought to form multiple phases of enclosures relating to field and enclosure boundaries from a settlement site to the north-east of the study area. Medieval ridge and furrow had partially truncated the Roman features, with subsequent ploughing removing all visible traces of ridges within the field. [Au(adp)]

Work undertaken by: 110 Archaeology, CgMs

Seven trenches were excavated across the site, two of which revealed archaeological activity. A large partially exposed pit was recorded, and yielded Roman pottery and building material, animal bone, and fragments of burnt stone and iron slag. Near the pit was a flat based ditch oriented east to west and

containing animal bone and a flint waste fragment. A shallow flat based gully was also discovered, and produced a single sherd of medieval pottery. This gully may have represented a foundation for an earlier structure. The site was covered in a thick layer of post-medieval ploughsoil, and was probably later used as pasture or an orchard. Long Ashton, Old Angel Inn

Broomhead, R A Croscombe : R.A. Broomhead, 2008, 1p

Work undertaken by: R.A. Broomhead

A small scale evaluation was undertaken to assess the archaeological implications of proposals to construct a two story dwelling on land to the south of the 'Old Angel' Inn. A limited desktop study had indicated that the site lay within the historic core of the settlement where archaeological features and finds could reasonably be expected although early maps showed no significant development. The evaluation indicated only that the area may have been utilised since the medieval period but demonstrated extensive post-medieval pitting. [Sec]

LAND ADJACENT TO TAVISTOCK ROAD

Archaeological Evaluation on Land adjacent to Tavistock Road, Plymouth, Devon

Jones, P Exeter : Exeter Archaeology , 2007, 8pp, figs, tabs

Work undertaken by: Exeter Archaeology

An archaeological evaluation was carried out in November 2007, on land adjacent to Tavistock Road, Plymouth. Four trenches were excavated, targeting a number of anomalies of potential archaeological origin, identified by geophysical survey. Segments of four shallow ditches were exposed, all of which were likely to have been truncated as a result of ploughing. One ditch dated to the late post-medieval period, whilst the remainder were undated. [Au(abr)]

HUNSTRETE GRAND MANSION***Hunstrete Grand Mansion, Somerset. Archaeological Evaluation and Assessment of Results***

Hall, N Salisbury : Wessex Archaeology , 2008, 47pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An archaeological evaluation was undertaken by Channel 4's "Time Team" in the grounds of Hunstrete House Hotel, with the aim of finding any surviving remains of the large house built in the Palladian style on the site in the 18th century [Hunstrete Grand Mansion] and of its medieval predecessor. The Palladian house was shown on maps of 1759 and 1806-7, but was still unfinished by the 1830s, when it was sold and used as a source of building materials to restore Prior Park in Bath. No building was shown on the site on a map of 1846, although it may not have been entirely demolished until 1860. The only surviving upstanding remains of the Grand Mansion was a five-arched arcade or portico at the northern edge of the site, depicted in an 18th century watercolour of the northern elevation of the Mansion. No structural evidence for the medieval manor house was recovered, although this was in accordance with the known clearance of the site for the construction of the Grand Mansion, and it was possible that some building stone from the medieval house was re-used in the latter. A small quantity of residual medieval finds was encountered. The evaluation succeeded in recovering a partial ground plan of the Grand Mansion, comprising a substantial wall encompassed by a thinner wall on the same alignment, all well constructed of stone and apparently of a single phase of building. The outer wall was believed to have been a revetment, surrounding a void around the basement storey which acted as a light well to this storey, and which would also have allowed access to the house at this level. There was some evidence that this represented a re-use of the moat which was believed to have surrounded the medieval manor on the site. The evaluation also showed that the house had a substantial and elaborate basement level complete with plastered walls and fireplaces, one of which showed evidence

of use. Although the mansion was documented as being unfinished, it appeared that at least the lower apartments had been decorated and furnished by the time of abandonment. [Au(abr)]

WESTBURY DUCK DECOY

Westbury Duck Decoy

Broomhead, R A Croscombe : R.A. Broomhead, 2008, 1p

Work undertaken by: R.A. Broomhead

A desktop assessment and archaeological survey was undertaken of a former duck decoy to the east of Barrow Wood Lane. This was in support of a planning application and at the request of English Heritage. The desktop assessment established that a duck decoy probably existed upon the site prior to 1637 but had almost certainly gone out of use by the early 19th century. Archaeological survey suggested that an early decoy may have been replaced and largely destroyed by the excavation of a later decoy upon the same site. [Sec]

Brigers, J Ashcott : James L Brigers, 2007, 24pp, pls, figs, refs

Work undertaken by: James L Brigers

Four evaluation trenches were excavated and found that the site was severely truncated by levelling activity in recent times and only the bases of trenches of 17th and 19th century date were encountered. A much higher level of preservation was encountered to the frontage with Back Lane, where two large intercutting pits were identified alongside a substantial north-south aligned ditch which retained the remains of a probable bank against its southern edge. One of these pits contained only pottery of possible 12th-13th century date. The remainder of these features were broadly contemporary and represented the remains of probable quarries and boundary features dating from the later 17th century. In the region of the frontage on Main Road, to the west of the main farmhouse, a surprisingly deep sequence of deposits was encountered composed of an uninterrupted sequence of dumps and cultivation build-up which contained pottery of the 13th to 15th centuries and a small scythe blade. TAUNTON, LAND AT CAMBRIA FARM

Taunton, Land at Cambria Farm

Robinson, F & McConnell, R Wincanton : Context One Archaeological Services, 2008, 1p
Work undertaken by: Context One Archaeological Services

Context One Archaeological Services Ltd carried out an evaluation on land to the east of Cambria Farm, Taunton following the discovery of a ditch and a quantity of bone and Roman pottery in geotechnical test pits, dug as part of the development proposal for a new Park and Ride scheme. The evaluation revealed 14 ditches/gullies, all in the southern half of the Site and which probably relate to a network of field boundaries and/or enclosures. Five ditches/gullies produced dating evidence. One ditch produced a late Neolithic/Early Bronze Age (2500-2000BC) chert scraper or piercer and a piece of burnt imported flint in its fill. Based on pottery evidence, the four remaining ditches/gullies were dated to the Late Bronze Age/Early Iron Age (1100-400 BC). A small quantity of residual Romano-British pottery sherds was also found in one of the ditches. Although the majority of features could not be dated, it was clear from the diversity of ditch/gully alignments and dimensions that these reflect multi-phased activity. This represented the first record of activity from the prehistoric period in the immediate area. The Romano-British evidence, albeit from a minority of finds, added to a growing corpus of evidence for the environs that attest to some degree of occupation. [Sec]

LAND AT THE GODDARD ARMS HOTEL, SWINDON*Land at the Goddard Arms Hotel, Swindon. Archaeological Evaluation*

King, D Swindon : Foundations Archaeology , 2007, 18pp, figs, refs

Work undertaken by: Foundations Archaeology

A total of eight trenches and six test-pits were excavated within the study area. A number of features were identified during the course of the project. These comprised three stone-lined drains, a well and a wall. These are all likely to have been of post-medieval origin, although an earlier, medieval date could not be entirely ruled out. A single sherd of medieval pottery was recovered from one drain, although this was recovered from material that had entered the drain after the collapse of the capping stones and is likely, therefore, be residual in context. In all cases the features stand proud of the natural ground into demonstrably post-medieval layers and may be considered unlikely to have survived undamaged, if of medieval or earlier date. The nature of these features was entirely commensurate with backland activity associated with the Goddard Arms. The evaluation indicated that there was a generally low potential for significant archaeological remains to have been present within the western and central parts of the study area. It was unknown as to whether there had been significant truncation of the natural deposits; although it was certain that some terracing and levelling of the area had taken place. Intact subsoils may have survived in Trench 7 and the testpits in the eastern part of the site. [Au(abr)]

COCKINGTON SCHOOL

Cockington School Archaeological Evaluation. Interim Summary

Jones, P Exeter : Exeter Archaeology, 2007, 1p

Work undertaken by: Exeter Archaeology

An archaeological evaluation comprised the machine-excavation of four trenches totalling 32m in length. The lack of any soil overburden sealing the natural within Trenches 24 along with the shallow nature and uniform depth of the natural subsoil indicated that the site had likely been subjected to extensive landscaping associated with the construction of the present school. LAND BEHIND 1-6 DOCTORS ROAD, HIGHER BRIXHAM

Archaeological Assessment and Evaluation of Land Behind 1-6 Doctors Road, Higher Brixham

Steinmetzer, M F R, Jones, P & Wheeler, J Exeter : Exeter Archaeology , 2007, 10pp, figs, refs

Work undertaken by: Exeter Archaeology

An archaeological assessment and trench evaluation of land was undertaken. The desk-based assessment established that a number of buildings existed within the boundaries of the site from at least 1803-4, with these shown as three separate structures on maps of 1842 and 1864. Most of these buildings had been removed by 1936, although a derelict structure in the southern part of the site was of a minor early to mid-19th century domestic design and once formed part of a larger building complex. The evaluation comprised the machine-excavation of three trenches. In one trench evidence for part of one of the buildings depicted on 19th-century maps was present, with identified remains including walls and a cobbled surface. The remaining two trenches contained largely negative results. No finds were recovered pre-dating the post-medieval period. [Au(abr)]

LAND AT BRIDGEMEAD, AVEBURY***Land at Bridgemead, Avebury, Wiltshire. Archaeological Evaluation***

Hart, J Cirencester : Cotswold Archaeology , 2007, 16pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

The evaluation identified the presence of a possible Roman trackway. A ditch and post holes likely to have been associated with the medieval settlement at Avebury were also identified and indicated that the medieval burgage plots extended as far west as the site. The archaeological features were sealed by buried subsoil and topsoil deposits, themselves overlain by a substantial thickness of modern deposits. [Au(adp)]

Reay, D Salisbury : Wessex Archaeology , 2007, 37pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An evaluation consisting of 23 trenches targeted over previously identified geophysical anomalies was carried out. Nine of these trenches contained archaeological deposits dating from the Neolithic/Bronze Age to late Roman periods. The main focus of activity, at the western end of the site, centred on a large Early/Middle Iron Age sub-circular enclosure that continued in use until the late Roman period. The enclosure was shown to have a complex of internal features, and was respected by three later and possibly Roman sub-rectangular enclosures. A range of well-preserved features showed the site to have been in continuous use for around 750 years and may have been of regional, if not national, significance. [Au(adp)]

EASTERN INFRASTRUCTURE, SALISBURY PLAIN TRAINING AREA***Eastern Infrastructure, Salisbury Plain Training Area, Wiltshire. Archaeological Field Evaluation***

Wessex Archaeology Salisbury : Wessex Archaeology , 2007, 55pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

A field evaluation was carried out in advance of the construction of some 37.4 km of road linking the Northern and Southern Transit Routes. Possible archaeological features were sample excavated. The majority of these were proven to be of either geological origin or the result of tree root action, as well as many modern agricultural features such as plough scars. In Area 1 a Roman burial was encountered, along with prehistoric worked flint from the upper fill of a large ditch or elongated pit. An undated linear feature, possibly a field boundary, was also recorded in the same trench. Lynchets from the Roman and later periods were noted. A small and apparently isolated prehistoric pit was encountered in

Area 2 and was indeed the only dateable feature in the area. Possible post holes and stake holes were recorded in Area 3 while in Area 4 an undated ditch was interpreted as a possible former field boundary. Significant archaeological features were discovered in Area 5, including a large undated pit and three ditches, all oriented east to west. It was suggested that these features were of prehistoric origin due to their form, the presence of a single sherd of Late Bronze Age date, and the presence of a known Bronze Age barrow cemetery in the vicinity. Area 6 contained no archaeological remains, Area 7 demonstrated the presence of a possible early modern military trackway or railbed, and in Area 8 a moderately sized pit of prehistoric date was excavated. An evaluation was carried out and the potential of the site was successfully examined. The earthworks on the site, previously considered to be examples of medieval earthworks, were in fact the product of modern dumping. However, beneath this two earlier archaeological periods were represented, an earlier, prehistoric phase of Late Bronze Age or Iron Age date a later, medieval phase. An area that was unable to be examined due to the presence of a football pitch was thought to have similar potential. The site was determined to have deposits present likely to be of local significance, at least in terms of the development of the medieval village and potentially also the prehistoric landscape. Burrows, B Edgbaston : Birmingham Archaeology, 2007, 17pp, figs, refs

Work undertaken by: Birmingham Archaeology

The work comprised trial-trenching adjoining the frontage of Icknield Street, and a small-scale salvage recording exercise adjoining an area excavated in 2006. Previous work identified a double-ditched

enclosure complex possibly associated with animal husbandry, located to the rear of the Roman road frontage. Closer to the road frontage was evidence of ditch plot divisions and other ditches. Occupation of this roadside area was dated from the early/mid 2nd century to the late 3rd/early 4th century. The 2007 trial-trenching identified pebble surfaces alongside the Roman road frontage, similar to those identified by fieldwork further to the north during 2006. No other Roman, or possibly Roman features were encountered. The salvage recording provided an opportunity to further examine a ring gully and adjoining ditched plot boundary, first investigated in 2006. [Au(abr)]

Archaeological Investigations at the Saracen's Head, Kings Norton, Birmingham, 2005-2007

Charles, M, Duncan, M & Hislop, M Edgbaston : Birmingham Archaeology, 2007, 76pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

Three areas were archaeologically investigated in 2006, the courtyard, the entrance passage from the green, and a small area on the eastern frontage of the north range. The former hall and cross passage areas inside the north range were investigated in 2007. A number of Roman pottery sherds were recovered, and the earliest feature was a large ditch from the early 13th century. The excavation demonstrated that at least three timber structures existed on the site in this period. These remains included a 3m wide building of earth-fast post construction, the remnants of a sill beam slot and a stone plinth and a third building, which was also likely to have been timber framed. There was evidence of associated domestic cooking activities of the same date. Deposits edging the area were well paved with a pebble surface. A second medieval phase was contemporary with the construction of the existing timber-framed buildings on the site which date from the late 15th / early 16th century. A cobbled yard surface also dated from this period, and, inside the north range, there was evidence for the composition of the floors including the remnants of cobbling within the cross passage and stamped earth in the hall, where there were also a number of contemporary ceramic tiles in situ. BELMONT ROW GLASS WORKS AND ASHTED PUMPING STATION, EASTSIDE, BIRMINGHAM*An Archaeological Evaluation of the Former Belmont Glassworks, The Belmont*

Richards, G Leicester : University of Leicester Archaeological Services, 2007, A4, 19 pages, 9 figs., 6 plates

Work undertaken by: University of Leicester Archaeological Services

University of Leicester Archaeological Services were commissioned to undertake an archaeological evaluation of a number of sites of potential archaeological significance adjacent to Belmont Row and Lawley Street Middleway, Eastside, Birmingham. An archaeological desk-based assessment had identified the potential for earth fast archaeological remains within the proposed development area. A total of nine trenches were excavated across the extent of the proposed development area. Four of these targeted remains associated with the Belmont Row Glassworks while, another four targeted the Belmont Glassworks while the final trench was within and around the Ashted Pumping Station. All three sites are of importance to in the study of Birmingham's industrial past. All of the three areas contained archaeologically significant deposits relating to both the glassworks and evidence suggests that the pumping station. Evidence from the latter suggests that it is in a potentially good state of preservation. [OASIS(Au)]

Duncan, M Edgbaston : Birmingham Archaeology, 2008, 44pp, pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation was carried out at the site. A sequence of waterlain deposits including 12th-13th century pottery were encountered on the site. Later a boundary ditch which probably went out of use in the 13th century and a group of medieval pits and post holes were encountered. During the medieval and post-medieval period the site was used for tanning with evidence of tanning pits containing 16th-17th century pottery. Later a 19th century brick built structure was encountered. [Au(adp)]

Edgeworth, M Edgbaston : Birmingham Archaeology, 2007, 27pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

Three trial trenches were excavated. These revealed differential survival of medieval features associated with the moat. A very good survival of archaeological deposits was encountered in the south-eastern part of the site. A large pit-like feature and a cobbled surface, within the interior of the moated enclosure, were found beneath a protective layer of gravelly clay. Further to the northwest, however, severe truncation was found to have removed all archaeological traces, with the exception of deep features. The truncated base of the moat, just 25 m wide, was uncovered and investigated. A possible leat, that may have brought water into the moat, was also found running down the slope from the north-west. Environmental samples from the base of these features produced negative results, perhaps indicating that they were regularly washed through with running water. Fills contained surprisingly few finds, with only two pieces of roof tile and one sherd of pot coming from the fill of the truncated moat. All were thought to be of 13th-14th century date. [Au(abr)]

Phear, S Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 50pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

Five trenches were opened across the car park. The results indicated widespread occupation and industrial activity in the form of metalworking across the whole site in the mid to late medieval period, with one trench illustrating the remains of a sandstone structure which may have dated to the 14th century. The predominant medieval features were pits, which appeared to be cess pits and rubbish pits. While several post holes were also identified, this feature type was generally under-represented. FORMER CORUS STEELWORKS, BIRMINGHAM ROAD***Former Corus Steelworks, Birmingham Road, Oldbury, Sandwell (Phases 2 and 3): building recording and archaeological evaluation 2006-2007***

Charles, M, Edgeworth, M & Kelleher, S Edgbaston : Birmingham Archaeology, 2007, A4 spiral bound report

Work undertaken by: Birmingham Archaeology

The second and third phases of an archaeological evaluation and historic building recording were carried out at the former Corus Steelworks, Birmingham Road, Oldbury, Sandwell (NGR SO 997 895) in November 2006 and April 2007. Documentary and cartographic evidence suggested that there was potential for the survival of buried remains associated with the medieval Blakeley Mill. A total of nine trial-trenches were excavated, six in the southwest part of the site and three to the northwest. No evidence for features associated with the mill was found. A palaeochannel running roughly east-west was recorded in one trench. Two small gullies of probable post-medieval date were also recorded. A large tree bole - at first tentatively identified as a possible complex of archaeological features - was encountered at the western part of the site. A single sherd of medieval pottery was recovered from a context associated with the tree bole. Undated possible buried soils were identified at the centre of the site. At the extreme western end of the site evidence of a 19th century canal basin associated with the former Broadwell Colliery was uncovered. This had been filled in during the latter part of the 20th century. [OASIS(Au)]

LAND ADJACENT TO SEYMOUR ROAD/BIRMINGHAM ROAD, OLDBURY, SANDWELL*Evaluation of Land adjacent to Seymour Road/Birmingham Road, Oldbury, Sandwell*

Mitchell, W Edgbaston : Birmingham Archaeology, 2007, 53pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation was carried out at the site in advance of a proposed residential development. Six evaluation trenches between 16m and 28.5m were excavated at strategic positions across the site. The same general pattern of deposition was encountered across six trenches. This consisted of sand and gravels, overlain by contemporary deposits of mixed sandy silt and demolition rubble overburden and levelling deposits of red sand. This pattern of deposition represented a deliberate attempt to flatten and level the site after the demolition and clearance of the structures and was relatively uniform across the site. The extant archaeology was directly comparable to the evidence available in the Ordnance Survey Mapping. The trenches on the southern side of the site provided evidence of domestic occupation. A series of early 20th century foundation walls and drainage were identified representing the residential properties fronting onto Seymour Road, along with a series of contemporary and modern waste and demolition pits. Evaluation of the northern side of the site provided evidence of structures dated to the late 19th century which related to residential properties fronting on to Birmingham Road. These structures took the form of foundation walls and regularly laid engineering brick yard surfaces with inlaid drainage channels and subterranean pipes. [Au(adp)]

BLOOMFIELD ROAD, TIPTON*Bloomfield Road, Tipton, An Archaeological Evaluation and Watching Brief*

Kelleher, S & Mann, P Edgbaston : Birmingham Archaeology, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

Seven evaluation trenches were excavated across the site. Post-medieval archaeological features, consisting of brick floor-surfaces, backfilled cellars, and a brick-lined industrial well or mine shaft, a stone-lined ditch, and a possible pond were identified. High levels of truncation were present across the site, with some areas entirely scoured out by later mining activity. The eastern part of the site was disturbed to levels of c.3m+ by later demolition and ground levelling work, and so it was likely that any features of note in this area had also been lost to these activities. This suggested that the potential for the survival of archaeological features in these areas was limited, and therefore no further work was recommended. [Au(abr)]

LAND OFF QUEEN STREET AND MEETING STREET, WEDNESBURY, SANDWELL*Land off Queen Street and Meeting Street, Wednesbury, Sandwell. An Archaeological Evaluation*

Charles, M Edgbaston : Birmingham Archaeology, 2007, 29pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation was carried out at the site in advance of a proposed residential development and consisted of three trial trenches. A residual Roman pottery sherd was recovered from a pit recorded in one of the trenches close to Meeting Street. This suggested activity possibly relating to the Stretton to Metchley Roman Road which was thought to pass through the locality. The pit also contained 17th century pottery, probably locally produced. The function of the pit was unknown, but it could be associated with crafts, industries or agricultural activities which may have been carried out on the site, in an area which was probably outside the 17th century town boundary. Alternatively, it was perhaps possible that the pit could have been evidence of back-plot activity relating to development along Meeting Street in the 17th century. The well preserved vaulted undercroft walls of the Methodist chapel were recorded in another trench which also confirmed the position and alignment of the structure. [Au(adp)]

THE ASSEMBLY HALL, WELLCROFT STREET, WEDNESBURY

The Assembly Hall, Wellcroft Street, Wednesbury, Historic Building Recording and Archaeological Evaluation

Edgeworth, M & Tyler, R Edgbaston : Birmingham Archaeology, 2007, 59pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

Work consisted of both historic building recording and the excavation of an archaeological evaluation trench in the yard just to the east of the Assembly Hall buildings. The study area lay within the medieval core of the medieval town and just outside the supposed ramparts of a possible Iron Age hillfort. Building recording revealed that the standing building essentially represented a two-phase structure, originating with a single range, gabled hall erected in 1857 by the Christian Brethren as a non-conformist assembly hall, substantially enlarged at some point between 1919 and 1936 with the addition of a second gabled range to the east. In the evaluation trench, modern make-up deposits were encountered to a depth of 2m, with some indication that ground reduction took place prior to the building up of ground levels. Natural clay was encountered directly below 19th century deposits. Cut into the natural clay in the northern part of the trench was a large feature, thought to be a ditch running southwest to northeast, filled with a homogeneous reddish brown silty clay. The ditch was up to 1m deep and at least 2.20m wide, with the location of the north-western side, and therefore the full extent of the ditch was not established. The base of the ditch was 3.00m down from the present ground surface. No dateable finds were recovered from the ditch fill. [Au]

WEDNESBURY TOWN CENTRE, MARKET HALL***Wednesbury Town Centre, Market Hall, Archaeological Evaluation, Stage 3***

Duncan, M Edgbaston : Birmingham Archaeology, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation was undertaken in advance of proposals for the construction of a new supermarket and associated petrol filling station in Wednesbury. The work described represented the third stage of evaluation under the footprint of the former Market Hall at the eastern end of the development site. A single evaluation trench and five test pits were excavated within the area. The results of the evaluation revealed a series of post-medieval deposits. The depth of material suggested a period of substantial infilling of large features within the site that may have related to clay pits associated with the localised pottery industry. Above this material structural remains of the 19th century housing stock were discovered along the Camp Street frontage with associated wells and brick-lined cess pits to the rear. [Au]

BENTLEY HALL, QUEEN ELIZABETH AVENUE, WALSALL***Second Phase Geophysical Survey and Trial Trenching on the Site of Bentley Hall, off Queen Elizabeth Avenue, Walsall***

Soden, I Northampton : Northamptonshire Archaeology, 2007, 44pp, pls, colour pls, tabs, refs

Work undertaken by: Northamptonshire Archaeology

Geophysical survey and trial trenching were conducted on the site of Bentley Hall, off Queen Elizabeth Avenue, Walsall. Modern paths and traces of Victorian drains were the only features revealed. The trial trenches were more successful. Cut features from which medieval pottery was recovered may be associated with a putative medieval hall on the site. The substantial remains of a brick wall were discovered adjacent to the modern Bentley Cairn. It appeared to be part of the Jacobean hall which was the home of the Lane family who played a part in Charles II's escape after the Battle of Worcester in 1651. A stone mullioned window set onto the foundation wall may have indicated an internal cellar at this position. The Jacobean wall was subsequently re-used to provide a footing to the later Victorian Hall. A north south wall was revealed in two trenches and marks the property and garden boundary of

the Victorian Bentley Hall. A brick lined well and two brick or stone lined drains were found to the east of the site. [Au(abr)]

WALSALL WATERFRONT, WOLVERHAMPTON STREET, WALSALL

Evaluation of Walsall Waterfront, Wolverhampton Street, Walsall

Mitchell, W Edgbaston : Birmingham Archaeology, 2007, Birmingham Archaeology Report

Work undertaken by: Birmingham Archaeology

In 2007 Birmingham Archaeology undertook an archaeological evaluation of Walsall Waterfront Development in advance of a proposed retail development. The study area is situated immediately west of Walsall town centre by the terminus of the Walsall Canal. The report outlines the results of an evaluation, carried out between November and December 2007. Six 20m x 1.8m trenches were excavated at strategic positions across the site. The chief features of archaeological interest were two large pits in trench 2/4. They were cut into the natural clay and ceramics within the fill of one of them suggest that they were backfilled in the 17th-18th centuries. Their likely purpose was for extraction of raw materials, either clay or the underlying shale/coal. Residual medieval pottery suggests activity of this date nearby. The palaeo-environmental evidence from within the pit fills suggests that in the 17th-18th centuries the area was largely open grassland, with little evidence of woodland; while the presence of cereal grains in relative abundance indicates that cereals were being grown in close proximity to the site or cereal processing was being carried out nearby. ROOKERY STREET, WEDNESFIELD, WOLVERHAMPTON

Archaeological Excavation at Rookery Street, Wednesfield, Wolverhampton

Hughes, J Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 44pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service
 An archaeological excavation was carried out at the site and three trenches were examined, the first laying west of the textile manufacturing premises. Trenches 2 and 3 lay to the east of the textiles building. Modern cellaring from recent 20th century buildings was encountered. A property boundary ditch was exposed in Trench One, producing an early 17th century tyg (vessel for communal drinking) and other fragments of pot. Therefore Trench One was reopened and extended to clarify the significance of finds. It exposed further features including a second ditch. Both features were probably constructed to form a boundary and drainage facility between two properties. The second ditch contained a near complete tyg vessel datable to late 16th/early 17th century. The fills of both linear features contained waste iron smithing slag fragments from hearth bases indicating 17th century industrial activity. A vaulted cellar was encountered in Trench Two and extensive cellaring was found in Trench Three disturbing natural deposits, although three pit features conjectured to be contemporary with the cellar were recorded within its northern half towards Rookery Street. Archaeological Desk-based Assessment and Evaluation at Upper House Farm, Moreton on Lugg, Herefordshire

Wainwright, J & Rogers, T Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

Archaeological features were recorded in all nine trenches including ditches, pits, two buried Roman soils or occupation layers and a metalled trackway. Features to the west of the site were largely undated while those to the east yielded Romano-British pottery of 1st-3rd century date. A single beam slot filled with charcoal provided evidence that timber structures stood at the north-east corner of the site. It was thought that the distribution of pottery indicated that occupation lay to the east of the site in the vicinity of the enclosure while features to the west may either have represent field boundaries and drainage gullies associated with Roman agriculture or an earlier settlement. A fragment of flint debitage and a scraper recovered from a shallow ditch and a further fragment from the fill of a probable pit was evidence of earlier activity in the vicinity. [Au(abr)]

PETER NASH CARS, 101-106 ST. OWEN'S STREET

101-106 St. Owen's Street, Hereford. Archaeological Evaluation

Sherlock, H Fownhope : Archenfield Archaeology , 2007,

Work undertaken by: Archenfield Archaeology

Archenfield Archaeology Ltd was commissioned to archaeologically evaluate land at St Owen's Street Hereford at the former Peter Nash car dealership. The work was commissioned to provide additional information for the demolition of existing buildings and the erection of a block of 22 flats. The site was in an area which may have been first developed as a suburb by the later 11th and early 12th centuries. Cartographic evidence shows that the modern plot boundaries still reflect the medieval partitioning of the site. Two evaluation trenches were excavated which showed that the stratigraphic sequence is well preserved and was not truncated by Victorian and modern intrusions. No medieval features were encountered, but there is clearly a high potential for the preservation in situ of medieval deposits across the site. [OASIS(Au)]

WILDGOOSE CHASE, BROAD STREET, WEOBLEY*Archaeological Evaluation at Wildgoose Chase, Broad Street, Weobley, Herefordshire*

Archer, J Leominster : Border Archaeology , 2007, A4 ring bound erposrt

Work undertaken by: Border Archaeology

Two evaluation trenches were opened within gardens to the rear of 'Wildgoose Chase', Broad Street, Weobley, located within the footprint of the proposed new dwelling. Cartographic evidence shows that the site had previously been occupied by four narrow burgage plots shown on the Weobley tithe map of 1838, which were subsequently cleared in the mid-19th century when the site was converted into an

orchard. Evidence of an accumulation of post-medieval garden soils was noted in Trench 1, disturbed by modern landscaping activity. Natural deposits were observed at a shallow depth, occurring at 0.5m at the E end of the trench and gradually deepening towards the W end of the trench. A significant accumulation of garden soils and a number of rubbish pits of probable post-medieval date were encountered within Trench 2, reflecting the usage of the area as garden plots lying to the rear of the burgage properties which previously occupied the site as shown on the Weobley title map of 1838 and were demolished in the mid 1840s. These garden soils were evidently of considerable depth, extending down to the base of the trench. No significant archaeology was discovered. [OASIS(Au)]

LAND OFF ASTON STREET, WEM

Land off Aston Street, Wem, Shropshire. An Archaeological Evaluation

Charles, M Edgbaston : Birmingham Archaeology, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological evaluation of land off Aston Street was undertaken and aimed to locate the 17th century Civil War defences that, records suggested, passed through the site. Three trial-trenches were excavated. One trial trench revealed evidence of two wide adjacent parallel ditches that may have formed part of the Civil War defences. The secondary fill of one of the ditches contained sherds of late 17th/18th century pottery. The other ditch contained no finds and had a single fill that was consistent with rapid backfilling that may have occurred at the end of the Civil War. This was later recut by a ditch that contained a large amount of pottery dating from the 18th and 19th centuries. Another trial-trench located a ditch, possibly a field boundary, of 18th century or earlier date. [Au(abr)]

RIVERSFIELD DRIVE, ROCESTER

Riversfield Drive, Rocester, Staffordshire. Archaeological Evaluation and Watching Brief Interim Report

Hamilton, E & Paul, S Edgbaston : Birmingham Archaeology, 2007, 15pp, colour pls, figs, refs

Work undertaken by: Birmingham Archaeology

An evaluation was undertaken in advance of a new residential development and consisted of archaeological monitoring during the grubbing out of foundations and subsequent trial trenching. The development site lay just to the south of a known Roman fort and settlement and was thought to lie within the associated extra mural area. Only two of the 8 trenches revealed possible Roman features, suggesting that the Roman vicus did not extend into the site. Trenches one and two contained evidence for a possible beam slot and two post holes, one of which contained a sherd of Derbyshire ware pottery. The archaeological features were sealed by a substantial deposit of alluvium directly overlying the natural that was also present in all other trenches. This alluvial deposit suggests that the site was subject to frequent flooding events which may have explained why the Roman settlement to the north did not extend into this area. The alluvium overlay the possible Roman features in Trenches one and two, indicating that the site did not suffer large scale truncation during the construction of the 1960s apartment blocks. The absence of archaeological remains within the trial trenches therefore appeared to represent a genuine absence of significant Roman activity in the area, rather than indicating that evidence for such activity failed to survive up to the present day. TOWN MEADOWS WAY, UTTOXETER***Town Meadows Way, Uttoxeter, Staffordshire. Report on an Archaeological Evaluation***

Brightman, J, Marshall, B & Stafford, L Bakewell : Archaeological Research Services, 2007, 28pp, figs, colour pls, refs

Work undertaken by: Archaeological Research Services

The evaluation consisted of the excavation of four trenches. The project uncovered a number of modern features and a single linear feature on the western side of the site which contained medieval pottery. The evaluation also displayed that due to modern development, the level of the natural ground in the eastern area of the site had been significantly lowered. [Au(abr)]

Forrester, D & Goodwin, J Stoke-on-Trent : Stoke-on-Trent Archaeology, 2008, 32pp, colour pls, figs, refs

Work undertaken by: Stoke-on-Trent Archaeology

The evaluation involved the excavation of four trenches and identified the remains of a 19th century cellar in Trench 2, related to one of the properties that occupied the site during the period. A privy/ash pit in Trench 3 and a waste pit in Trench 45 showed further 19th century activity on the site and were the source of two ceramic assemblages comprising a range of standard wares typical of many households at this time. SALTWORKS LANE, WESTON***Saltworks Lane, Weston, Staffordshire. Archaeological Evaluation***

Lee, R Lancaster : Oxford Archaeology North, 2007, 52pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

The evaluation located the presence of well-preserved structural remains relating to the varying elements of salt and manure works recognisable from the 1890 OS map. It appeared that more than one phase of construction was in evidence, and although there were finds relating to the 20th century alabaster bowl factory that took over the site, no specific finds or features relating to salt or manure working could be found. It appeared that the potential for archaeological remains within the western part of the site was low. [Au(adp)]

BERNHARDS GARDEN CENTRE, BILTON ROAD, RUGBY

Archaeological Evaluation: Land at Bernhards Garden Centre, Bilton Road, Rugby, Warwickshire

Wilson, N Milton Keynes : Archaeological Services & Consultancy Ltd., 2007, 23pp, colour pls, figs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd.

An evaluation was undertaken in advance of a residential redevelopment of the site. It was considered possible that evidence for brickmaking would be found on the site. Though no such evidence for brickmaking was revealed in the evaluation, it was highly likely that several of the brick buildings which had been used by the garden centre would originally have been associated with the brickworks. However, as these buildings were demolished their precise date and function remained unclear. From the sections exposed where demolition work had taken place it was clear that much of the site had been significantly truncated it was not clear if this truncation took place during the lifetime of the brickworks or later. A number of modern features were identified in the trenches, including a field boundary ditch which was filled in during the 1930s, a series of four shallow north south orientated trenches and several service runs. Palmer, S Warwick : Warwickshire Museum Field Services, 2007, 16pp, colour pls, figs, tabs, refs

Work undertaken by: Warwickshire Museum Field Services

Archaeological evaluation in the modern car park revealed a series of undated pebble surfaces cut by pits which may have been contemporary with the late 15th or early 17th century phases of the manor house. Other undated features included a cobbled surface, a stone wall and a steep sided gully aligned parallel to the Hall which probably represented garden features. Part of a raised stone road aligned alongside the former gatehouse was similar to one known to have existed in the rear stable yard. [Au(abr)]

OLD BARN, LONGBRIDGE, WARWICK***Archaeological Evaluation at Old Barn, Longbridge, Warwick***

Palmer, S Warwick : Warwickshire Museum Field Services, 2007, 16pp, colour pls, figs, tabs, refs

Work undertaken by: Warwickshire Museum Field Services

Geophysical survey, trial trenching and fieldwalking were undertaken on land located near to the Longbridge cursus. Geophysical survey identified a couple of linear anomalies thought to be agricultural in origin, and a small assemblage of undiagnostic flint flakes was found during fieldwalking. A trench was positioned on the north side of the Old Barn and found three undated, parallel gullies that aligned with a trackway cropmark on the west side of the evaluation area. A further trench revealed and undated probable field boundary ditch aligned along the side of an existing trackway. [Au(abr)]

Hughes, J Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

An assessment and evaluation were carried out in response to proposals to construct 11 new residential dwellings on the site. The assessment showed that archaeological deposits from the prehistoric to post-medieval periods were likely to be present, and also that the site had changed little in the past one hundred years. A single evaluation trench was excavated, however, no finds or features of an archaeological nature were encountered. Despite this, the site was still thought to hold considerable potential for the presence of Roman and medieval features. [Au(adp)]

Napthan, M Worcester : Mike Napthan Archaeology, 2007, 12pp, colour pls, figs, tabs, refs

Work undertaken by: Mike Napthan Archaeology

The evaluation recorded a small number of cut features dating from the 11th to 14th centuries, interpreted as ditches and a gully. The presence of a range of earlier and later medieval pottery pointed to significant activity from these periods. The earliest phase of medieval activity was sealed by apparent cultivation layers with medieval pottery. A later buried topsoil indicated a long period of lower intensity occupation, probably post-medieval agriculture. As the canal frontage was occupied by industrial and commercial entities, the site became truncated by development. A number of canal side buildings were recorded prior to their demolition. The site was thought to contain potential for the discovery of significant archaeological remains. [Au(adp)]

Vaughan, T Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

The evaluation identified medieval remains relating to the frontage and comprising the stone walls and foundations of a probable 14th century building, predated by several 13th century pits and post holes to the east and abutted by a sequence of 16th century deposits to the west. A further 13th century pit was identified at the rear of the plot. A north-south oriented unmortared wall of lias stone was also revealed. This was thought to have been part of a building that stood until the 18th century. Make-up and garden soils cut by pits were also observed. The site was thought to have been of regional importance due to the good level of survival, the relative rarity of the remains and the potential for further discoveries. [Au(adp)]

Litherland, S Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 14pp, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

While no prehistoric features were recorded, the finds assemblage was thought to be of some importance. The recovery of quantities of work flint and debitage, prehistoric pottery, clay and fire-cracked stones were thought to point to settlement activity during the Neolithic/Early Bronze Age. Some Roman pottery and other finds were also recorded. The preservation of these prehistoric and Roman artefacts was such that it was thought that there had been little disturbance in the area, however, it was not relevant to broaden the archaeological research frameworks to a local, regional or national level. Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

The results revealed no evidence of Romano-British activity on the site, nor remains from the prehistoric period. The features identified dated to the 19th to 20th centuries, including several pits and a series of plough marks, which were considered to be related to market gardening or other agricultural activities. This was supported by datable artefactual materials within one pit, some plough marks and the subsoil deposit, which also contained occasional residual medieval and post-medieval material. Otherwise no significant archaeological structures, horizons or deposits were identified, nor artefacts recovered. The potential for any significant archaeological deposits within the site was considered to be low. [Au(adp)]

Wainwright, J Worcester : Worcestershire County Council Historic Environment & Archaeology Service, 2007, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Worcestershire County Council Historic Environment & Archaeology Service

No features or deposits of archaeological significance were excavated on the site. It seemed likely that although there was evidence for prehistoric as well as Romano-British settlement to the north of the site, the study area was not utilised for settlement. The underlying drift geology of gravels to the north of the site was more conducive to settlement than the heavier clays underlying the site itself. However, the site was under cultivation by the medieval period and it was possible that cultivation was being carried out at an earlier date. [Au(adp)]

Adamson, N Kingston-upon-Hull : Humber Field Archaeology, 2007, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

The earliest archaeologically significant deposits were late 12th-early 13th century organic sediments, containing several timbers surrounded by chalk consolidation in a central sondage, perhaps representing part of a structure. These deposits were overlain by further silty organic materials, in turn overlain by a further dark occupation later sealed beneath clay sealing deposits and chalk rubble. A deep linear feature across the site was thought to be a robber trench. Archaeological deposits were thought to lay below the proposed construction horizon. [Au(adp)]

Tibbles, J Kingston-upon-Hull : Humber Field Archaeology, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

The earliest recorded feature may have been of Roman date. A pit recorded in Trench Two contained later Roman pottery as well as a small quantity of animal bone. A small number of late medieval features, perhaps of 14th to 16th century date and comprising slots, shallow pits and fragmentary cobbled surfaces, were recorded. Modifications to the road in the 18th century were noted. Structural features of a post-medieval date included a cobbled trackway or yard surface immediately north of the farmhouse, as well as a group of post holes further north which would have held upright timbers to support the roof of a structure such as an open-sided barn. Further work was recommended in the form of a watching brief. [Au(adp)]

An Archaeological Evaluation at Skiff Lane, Holme-upon-Spauldning Moor, East Riding of Yorkshire

Jobling, D Kingston-upon-Hull : Humber Field Archaeology , 2007, 16pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

The evaluation, carried out between 2006 and 2007, did not reveal any identifiable archaeological deposits. Elements of the WWII airbase were present just below the turf, in the form of thin concrete path alignments and building raft bases. There was still the possibility of some possible Roman deposits below the scope of the development. [Au(adp)]

LAND AT WESTGATE HOUSE, WESTGATE, HORNSEA

An Archaeological Evaluation on Land at Westgate House, Westgate, Hornsea, East Riding of Yorkshire

Tibbles, J Kingston-upon-Hull : Humber Field Archaeology , 2007, 38pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

The evaluation recorded early medieval ditches of possible 9th-11th century date, perhaps representing the boundaries of former properties, with the remains of post-medieval ridge and furrow that had been ploughed out in the 20th century. Few artefacts were recovered, although some residual flints and a sherd of possible Late Iron Age or early Anglo-Saxon pottery indicated possible prehistoric activity in the area. In general, the site contained little of significance, however, the presence of the early medieval ditches suggested that the area was exploited before the Norman Conquest, and as a result may have had the potential to yield further deposits. A watching brief was recommended. [Au(adp)]

LAND AT GIBSON LANE, MELTON

An Archaeological Evaluation on Land at Gibson Lane, Melton, East Riding of Yorkshire. Phase 2, Low Field Farm

Tibbles, J Kingston-upon-Hull : Humber Field Archaeology, 2007, 37pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

The evaluation followed on from works in 2006, when several features of possible archaeological significance were located. In Phase 2, a small number of features were identified. Two linear features of possible Roman date and a late medieval/early post-medieval ditch were the most prominent, together with several undated features. Post-medieval plough furrows were identified in five of the trenches. The site was generally thought to have been agricultural in nature from the Roman to post-medieval periods. [Au(adp)]

GUEST AND CHRIMES FOUNDRY, ROTHERHAM*An archaeological evaluation at the former Guest and Chrimes Foundry, Rotherham, South Yorkshire*

Burrow, A Northampton : Northamptonshire Archaeology, 2006, A4, heat bound, blue spine, clear cover

Work undertaken by: Northamptonshire Archaeology

Northamptonshire Archaeology carried out an archaeological evaluation in November 2006 on behalf of Under Construction Archaeology at the former Guest and Chrimes Iron Foundry in Rotherham, South Yorkshire. The evaluation found evidence relating to the 19th century development of the site. The in-filled canal basin was located and sections of both the original and re-directed courses of the Holmes Tail Goit were found. These features were buried beneath levelling deposits of industrial waste. Wall foundations and floor surfaces of small workshops and the boiler house chimney were found to the south which related to the early phase of the foundry works. [OASIS(Au)]

Reeves, B York : York Archaeological Trust, 2007, 15pp, colour pls, figs, refs

Work undertaken by: York Archaeological Trust

An archaeological evaluation revealed a cementing furnace in Trench Three. On the 1855 sale map, there was a building labelled "converting furnace" in a range of buildings to the west or northwest of furnace 3106 between Trenches 2 and 3. This suggested there was also the possibility of another cementation (converting) furnace. As a whole, the site appeared to contain structures which reflected the changing processes in the Sheffield steel and cutlery industries from the early to mid 19th century. [Au(adp)]

LAND AT BROAD LANE, SHEFFIELD

Final Report 1009c.1(1) Archaeological Mitigation on Land at Broad Lane, Sheffield

Alexander, D Sheffield : ARCUS, 2007, 159pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological evaluation found that Broad Lane was historically important as it was a former driveway that dated back at least to the medieval period. Late 18th century development meant that this whole area changed from being fields and crofts into dense social housing and small scale industry set around courtyards. The northern half of the site was heavily truncated by mid-20th century buildings. In that area, the only remains were of late 18th century buildings with deep structural walls and cellars. The soil contained residual late 13th century to late 14th century pottery. The south half of the site had excellent preservation and a number of buildings were identified, set around a cobbled yard. Two of the rooms of a tenement property had well preserved flagstone floors. [Au(adp)]

UPPER CHAPEL, NORFOLK STREET, SHEFFIELD

Archaeological Works at the Upper Chapel, Norfolk Street, Sheffield

Baker, K & Baker, S Sheffield : ARCUS, 2007, 60pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological evaluation, watching brief and the recovery of human burials were carried out at the site during the construction of an electricity sub-station and associated cable trenches. A buried soil deposit was encountered along the line of Pepper Alley. This deposit contained a significant amount of medieval pottery dating between the 13th and 15th centuries, including waster sherds and fragments of

kiln furniture suggesting that pottery production may have taken place on, or near, the site. Four human burials from the 18th century to the 19th century burial ground were recovered during the investigations in varying states of preservation. Substantial multi-occupancy graves and possible gold plated shroud pins may suggest that this was a relatively high status community when compared to other excavated burial grounds in Sheffield. LAND TO THE WEST BOWLING GOLF CLUB, BRADFORD

Archaeological Evaluation of Land to the West Bowling Golf Club, Bradford

Holderness, H Sheffield : ARCUS, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological evaluation was carried out and consisted of seven trenches revealing some sub-surface archaeological deposits and features. Two of the trenches were archaeologically sterile. Three of the trenches had small traces of archaeological deposits and the remaining two trenches contained significant archaeological deposits. A brief overview of the remains would suggest that little of the putative medieval complex survived in the area evaluated. The earliest features uncovered appear to relate to the latter half of the eighteenth century with no conclusive evidence of earlier deposits or structures. Two of the trenches contained backfilled mine shafts so further work was not carried out in those areas. [Au(adp)]

ST. JOHN'S CHURCH, COLEY, HALIFAX

St. John's Church Coley, Halifax Trial Trenching Report

Dickson, A & Ferguson, M C Cawood : A.D. Archaeology , 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: A.D. Archaeology

A programme of archaeological investigations was undertaken in advance of a proposed development of a new Sunday school and church hall to the east of the existing church within a graveyard, that was deemed full in the late 19th century. Although the graveyard was no longer used for interment it still retained its gravestones and monuments and had extensive tree cover. The trenches were hand excavated down to the latest burial and once this horizon was achieved excavation ceased. Burials were recorded in all three trenches with the latest horizons identified at the top of wooden coffins in Trenches 1 and 2 and a brick built coffin in Trench Three. A preliminary survey of the historical documents by the church wardens identified 1084 burials in 624 graves in the site area and a schematic plan of the burial plots and memorials has been completed. The investigation succeeded in identifying a series of graves dating to the early modern period and a probable boundary wall which was likely to have been associated with the last phase of church building in the early 19th century. ASSELBY TO PANNAL NATURAL GAS PIPELINE

Asselby to Pannal Natural Gas Pipeline Archaeological Fieldwalking Survey: Appendix

Network Archaeology LtdLincoln : Network Archaeology Ltd, 2007, 147pp, figs, tabs, refs

Work undertaken by: Network Archaeology Ltd

An archaeological desk-based assessment and fieldwalking was carried out at the site. A second phase of fieldwalking formed the appendix of the 2006 survey. 1414 artefacts were recovered from 47 outstanding plots crossed by the pipeline. The majority of material was post-medieval pottery. Only 85 sherds of pottery dated to medieval or earlier periods. No prehistoric pottery was found, however, 13 struck flints were recovered. The rest of the assemblage was mostly post-medieval in date and comprised glass, ceramic building material, production waste, shell, animal bone, heat affected stone, clay tobacco pipe, worked stone, copper alloy and iron objects. Several concentrations of artefacts were identified ranging from flint scatters to plough spread early modern middens, however, none were thought of as being in situ. [Au(adp)]

ASSELBY TO PANNAL NATURAL GAS PIPELINE

Asselby to Pannal Natural Gas Pipeline. Topographical Survey Report

Patrick, D Lincoln : Network Archaeology Ltd, 2007, 58pp, figs, tabs, refs
 Work undertaken by: Network Archaeology Ltd

An archaeological desk-based assessment was carried out at the site along with a topographical survey. Six sites were surveyed in total, two of which are part of the complex of Scheduled Monuments known as the Aberford Dykes. The topographical survey revealed these legally protected earthworks to be poorly preserved in their above ground parts where they will be crossed by the proposed pipeline. Two mounds were investigated, one was of unknown function but was found to lie outside of the pipeline working width. The other was believed to be a natural land form partially modified by later utilisation as a field boundary. A system of linear channels, believed to be drainage features, were identified at the western end of the pipeline, whilst towards its eastern end a field containing ridge and furrow within a former enclosure was recorded. HUGH GAITSKELL SCHOOL, ST. ANTHONY'S DRIVE, BEESTON

Hugh Gaitskell School Archaeological Project, St. Anthony's Drive, Beeston, West Yorkshire. Archaeological Investigation

JB Archaeological Services Morley : West Yorkshire Joint Services, 2007, 34pp, pls, colour pls, figs, refs
 Work undertaken by: West Yorkshire Joint Services, JB Archaeological Services

An archaeological evaluation was carried out as part of a Year 6 pupil's project. The excavation revealed a limited stratigraphic sequence due to extensive demolition from the 1940s onwards. However, some material dating to the occupation of the houses was recovered, dating from the 19th century onwards. One small assemblage of knitting needles recovered from near a window suggested a specific location for that activity. A very small number of Slipware pottery sherds were recovered possibly indicating earlier occupation or manuring of previously open fields. No other archaeological finds or features were recorded during the project. [Au(adp)]

GRANARY WHARF, LEEDS

Granary Wharf, Leeds. A Programme of Archaeological Investigations 2007

Krawiec, K & Colls, K Edgbaston : Birmingham Archaeology, 2007, 42pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

Three evaluation trenches were excavated in the car park and hard-standing of Granary Wharf. The purpose of the project was to assess the character and state of the remains of three wooden sheds that

occupied the site during the 19th century. Two of the trenches recorded truncated remains of the foundations of former structures. A structure recorded in Trench One had a substantial limestone foundation and brick-built walls, with a cobbled interior floor. The floor was overlain with industrial waste. Trench Two recorded a wall and associated flagstone floor representing the north-west corner of a structure. Wood fragments recorded in the backfill and demolition deposits suggested the structure was primarily constructed from wood, with a brick foundation. From cartographic evidence, these structures were thought to date to the first half of the 19th century. No evidence for the structures was recorded in Trench Three, which consisted of successive layers of made ground. [Au(abr)]

THE GREEN BUILDING (PHASE 2C), ROUND FOUNDRY, HOLBECK

Archaeological Mitigation at The Green Building (Phase 2c), Round Foundry, Holbeck, Leeds, West Yorkshire

Bell, S Sheffield : ARCUS, 2007, 118pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

An archaeological evaluation was carried out at the site and revealed that the area of the mitigation fieldwork contained the footprint of elements of the historic core of The Round Foundry. Extensive archaeological deposits were exposed. A significant number of well-preserved archaeological structures were identified dating from the 19th century in addition to a number of features particularly in the north and west areas which were interpreted as dating from the initial phase of the works during the late 18th and early 19th century. Subsequent development of the site illustrated by the cartographic sources correlated well with the succession of archaeological features identified, and a simple series of building phases could be suggested on the basis of the structural relationships for each area. The structures exposed had a complex history with evidence for a number of modifications and rebuilding phases which illustrated the fluid nature of the internal spatial arrangement of an industrial building during its working use. The amount of artefactual material reflects the non-domestic nature of the site and the value of reusing materials, particularly scrap metal. [Au(adp)]

LOTHERTON PARK FARM, ABERFORD

Lotherton Park Farm, Aberford, West Yorkshire. Report on an Archaeological Evaluation & Watching Brief

Stanley, J York : On Site Archaeology, 2007, 43pp, colour pls, figs, tabs, refs

Work undertaken by: On Site Archaeology

An archaeological evaluation and watching brief was carried out at the site. The site was close to a Scheduled Ancient Monument known as The Rein, a wooded bank and ditch boundary which may have originated in the Pre-Roman period. Other sites such as Iron Age to Romano-British enclosures and settlements have been identified in the vicinity. Aerial photography suggests remains of settlements, fields and trackways in the local area. The investigation revealed two V-shaped ditches as indicated by the cropmark evidence converging close to the western limits of excavation. Pottery sherds found in the fill of the ditches suggested a later prehistoric or Roman date. No archaeological features indicative of settlement were revealed by the site strip suggesting that the ditches identified by excavation and aerial photography in the area of development probably formed field systems and boundaries for farmland during these periods. Land at Commercial Street, Rothwell, North Yorkshire. Archaeological Evaluation

Weston, P Morley : Archaeological Services WYAS, 2007, 50pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological evaluation was carried out at the site and consisted of ten trenches, five on either side of the Oulton Beck. The trenches south of the beck revealed the brick built remains of structures associated with the West Riding Match Works shown on maps from 1875 to 1932. Two ditches and alluvial deposits were identified north of the beck. One ditch corresponded to an element of a strip field system visible on an Map of 1839. The alluvial silts probably derived from the intermittent flooding of the area by the beck. No features were recorded and no finds were recovered that would infer activity in the area prior to the post-medieval period. [Au(adp)]

SWILLINGTON BRICK WORKS

Swillington Brick Works Archaeological Trench Evaluation

Flintoft, P Lincoln : Network Archaeology Ltd., 2007, 128pp, colour pls, figs, tabs, refs

Work undertaken by: Network Archaeology Ltd

Trench evaluation was carried out at the site in advance of proposed extension of the clay quarry. Of the features recorded the most notable was an oval pit containing heat affected clay and stones. The upper fills of this feature produced sherds from four pottery vessels of Anglo-Scandinavian and early medieval date. Pottery of this date was rare and these finds were considered to be of regional significance. The thirty-six excavated trenches also recorded the ditches of two overlapping field systems, the earlier one probably of Roman date and the later medieval or post-medieval. A complex linear feature consisting of a recut double ditch with two flanking ditches was interpreted as a track or driveway associated with the later field system. A roughly circular enclosure marked by two roughly concentric curvilinear ditches produced a small quantity of medieval pottery. Undated features included a number of other linear features and two pits with charcoal rich fills. Some parts of the excavation site especially the south and west sides and the north-east corner were shown to have been of low archaeological potential. Overall the evaluation trenches located the features seen on the geophysical

survey and indicated that this survey had been successful in identifying the linear features, though not the discrete pits. The features exposed in the evaluation trenches were partly characterised and unresolved questions relating to their form, function and dating were identified. [Au(adp)]

ASSELBY TO PANNAL PROPOSED NATURAL GAS PIPELINE, THE ABERFORD DYKES COMPLEX

Asselby to Pannal Proposed Natural Gas Pipeline The Aberford Dykes Complex. The South Dyke (Scheduled Monument No. 31520). Preliminary Excavation Report

Daniel, P Lincoln : Network Archaeology , 2007, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Network Archaeology

An archaeological evaluation was carried out at the site. Initial results suggested that the boundary marked by The South Dyke may first have been articulated by a prehistoric pit alignment discovered on the site. The South Dyke ditch was probably dug in the Iron Age and became backfilled soon afterwards. Evidence was uncovered that the bank that accompanied the ditch was likely to have been positioned to the north of the ditch, the bank was removed in antiquity. Roman activity on the site was represented by a linear feature running parallel to The South Dyke, a later layer of colluvium sealed it. It was suggested that the dyke was one manifestation of a civil, non-military territorial boundary marker that may have been redefined at several stages in the past. Whilst no direct evidence of domestic structures was found on the site, the artefactual assemblage suggested that settlement was located in close proximity in both the Iron Age and Roman period. Outwood Hall, Outwood, Wakefield. Archaeological Evaluation

Dunbar, L & Fouracre, L Twickenham : AOC Archaeology Group , 2007, 54pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

An archaeological evaluation was carried out and revealed a series of both brick and stone built walls with associated brick and ceramic drainage. These walls and services were believed to have related to 19th and 20th century buildings. The southern and eastern sides of the site were found to have been built up by a thick layer of redeposited clay. This post dated some brick drains so would apparently relate to later 19th/20th century activity. No medieval or post-medieval pottery or features were found. Parts of the site were shown to have suffered late 20th century disturbance in the form of large, deep pits filled with building rubble and general debris. Finds recovered from the site consisted mostly of a variety of bricks along with a small assemblage of 19th/20th century printed ceramic and stoneware sherds with rarer pipe stems/bowl and a small assemblage of early 20th century glass bottles, some of which were marked. ASSELBY TO PANNAL NATURAL GAS PIPELINE***Asselby to Pannal Natural Gas Pipeline. Archaeological Evaluation***

Clark, P Lancaster : Oxford Archaeology North, 2007, 176pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology North

For this phase of the works, 87 evaluation trenches were excavated, targeting cropmarks, geophysical anomalies and a number of documentary sites. A rectangular enclosure containing Iron Age pottery was observed. Two large ditches originally detected by geophysical survey were also encountered, as well as other pits and ditches containing Roman pottery. The most notable sites located upon the band of Magnesian limestone comprised enclosures, boundaries and trackways forming an agricultural and settlement landscape. Seventeen trenches were located in high-relief non-calcareous geology to the north-west of the limestone, with features corresponding to geophysical anomalies in fifteen of these trenches. The most notable of these was a curvilinear ditch, producing prehistoric pottery. A pit and a pair of ditches not detected by geophysical survey were also noted. Further fieldwork was recommended on all sites. [Au(adp)]

An Archaeological Evaluation on Land at Middleton Lodge Estate, Richmondshire, North Yorkshire

Goode, A Durham : Pre-Construct Archaeology Ltd., 2007, 32pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological trial trenching evaluation was carried out at the site and consisted of four trenches positioned to test the main geophysical anomalies identified by the earlier survey and to establish whether these were of archaeological or geological origin. Trench One contained two versions of a former field boundary which was probably formerly associated with a hedge used to define the parish boundary. Although no artefactual material was recovered from the features both were considered to be of probable post-medieval origin. In Trench Two, no archaeological features were encountered to account for the geophysical anomalies. Trench Three was sited to test 2 linear anomalies but encountered natural boulder clay and bedrock overlain by layers of colluvium and topsoil. Trench Four did not encounter any linear features, but a modern dump deposit overlaying the colluvium and topsoil was recorded. [Au(adp)]

Bradley, J Lancaster : Oxford Archaeology North, 2007, 51pp, colour pls, figs, tabs, refs

Work undertaken by: CgMs, Oxford Archaeology North

An archaeological trial trench evaluation was carried out at the site and revealed a number of possible archaeological features in all but one trench. These were truncated, seemingly confirming the levelling

of the site to make a tennis court, in the early part of the 20th century. Several linear features were probably defunct boundary ditches, whereas discrete features were either pits, post holes or natural in origin. The ditches occurred only in the western and the north-western parts of the site and their orientation corresponded well with extant boundaries enclosing the rear gardens of properties adjoining the site. This, however, seemed coincidental as there was no such correspondence between the archaeological ditches and the boundaries depicted in these adjacent fields on the historic maps. It was possible that the ditches were therefore relict boundaries, belonging to a defunct system of land allotment which predated the First Edition Ordnance Survey Map of 1854. Only two finds were recovered from the features both from interventions within the same ditch, a residual prehistoric flint blade and a fragment of possibly intrusive clay tobacco pipe stem. A reasonable assemblage of medieval and post-medieval artefacts, predominantly pottery, was recovered from the overburden during the stripping of the trenches and it seemed strange that if the ditches were of a comparatively recent date but did not contain more finds as such, an earlier origin for the features could not be ruled out. LAND ADJACENT TO 3 KING STREET, SCARBOROUGH*Land adjacent to 3 King Street, Scarborough, North Yorkshire. Archaeological Evaluation*

MAP Archaeological Consultancy Ltd Malton : MAP Archaeological Consultancy Ltd., 2007, 73pp, pls, figs, tabs, refs

Work undertaken by: MAP Archaeological Consultancy Ltd.

The evaluation consisted of two trenches situated within the entrance and to the rear of the site. In Trench 1 four phases of stone walling associated with properties fronting on to King Street were recorded along with the remnants of street/yard surfaces. Finds from Trench 1 were limited to a small assemblage of pottery of 13th to 16th century date. In Trench 2, a considerable depth of structural remains relating to the late 19th and 20th century development of the site were exposed. The structures consisted of brick walls, concrete floors and drainage trenches. These features sealed a number of dump deposits dated by finds of pottery, clay pipe and ceramic building materials to the 17th/18th century and later. The earliest activity in this part of the site was illustrated by an east-west linear feature possibly representing a property boundary backfilled in the 17th century. [Au(abr)]

AREA B & FORMER PLAY AREA AT EASTWAY LINK, OSGODBY*Scarborough Integrated Transport Scheme, Fieldwork Area B and Former Play Area*

Wood, PBarnard Castle : Northern Archaeological Associates, 2007, 89pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

An archaeological evaluation was undertaken in advance of groundwork associated with the Scarborough Integrated Transport Scheme. The area of excavation comprised fieldwork Area B and a former play area adjacent to Priory Place and uncovered extensive remains of a previously unknown Iron Age or Romano-British settlement and evidence of intensive medieval occupation associated with the medieval village of Osgodby. The Iron Age or Romano-British settlement comprised a total of six ring gullies representing probable roundhouses, three of which contained handmade pottery. The number of potential structures and their distribution suggested either an extensive settlement or several phases of occupation. Six medieval buildings were excavated. All were aligned onto substantial sunken roadways which divided the excavated area into major zones of features. Within these zones a number of rectangular ditched enclosures were recognised again aligned with the roadways and where relationships could be established the buildings post-dated the enclosures, suggesting an expansion or reorganisation of the settlement. The excavated evidence did not equate with either the earthworks depicted on early maps of the village or with the geophysical survey. The greatest concentration of both Iron Age/Romano-British and medieval archaeology occurred where there were no recorded earthworks and where the survey indicated few anomalies. [Au(adp)]

AMBULANCE STATION, HAY MARKET CAR PARK, DUNDAS STREET, YORK

Ambulance Station, Hay Market Car Park, Dundas Street, York. Evaluation Report

Antoni, B York : York Archaeological Trust, 2007, 120pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

Remains relating to the 18th and 19th century tenements in the area were noted in three of the trenches excavated. In Trench Four, a complex series of deposits was observed. The earliest deposits represented a series of 12th century pits which had been levelled before a post-built structure was constructed in the later 12th century. This was replaced by a substantial limestone building in the 13th/14th century, demolished in the early 16th century to clear the way for a later 16th century building accompanied by a drainage ditch, constructed from unused brick mullions and containing several different fabrics of brick, suggesting that a kiln was operating in the area. The site was finally cleared to make way for the car park in the late 20th century, with the tops of the walls of the medieval and post-medieval buildings visible just below the surface of the car park. BLOCK D, HUNGATE DEVELOPMENT, YORK

Block D, Hungate Development, York. Report on an Archaeological Evaluation

Evans, D York : York Archaeological Trust, 2007, 136pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

An evaluation was carried out in advance of the redevelopment of the site. The earliest deposits were found to be naturally formed. No evidence was found of the Roman cemetery known to exist to the west of Dundas Street, and indeed for any other Roman activity on the site. Slight evidence for the Anglian period in the form of handmade sherds of pottery were recovered, however, no features were forthcoming. There was considerable evidence for the Anglo-Scandinavian period, particularly in Trench D3, where structures in the form of stake holes and post holes as well as other features and deposits were recorded, however, no coherent building could be interpreted. The evidence for this period was securely dated by pottery and seemed to represent casual exploitation of this marginal area, thought to lie on the periphery of the Viking Age town of Jorvik. Medieval activity was represented by clay extraction, possibly relating to the manufacture of pottery, brick or tile. No structural evidence was noted, however, there was evidence for rubbish pits and cess pits. Most, if not all of this activity ceased by the end of the 14th century. Post-medieval pottery and glass and modern structures were found, representing later activity. [Au(adp)]

White Young Green Birmingham : White Young Green, 2007, 21pp, colour pls, figs, tabs

Work undertaken by: White Young Green

An archaeological investigation of the site noted the presence of prehistoric occupation in the locality. This has been demonstrated by investigations undertaken within the existing quarry, which identified a number of Bronze Age features that were fully recorded as part of an agreed programme of archaeological investigation of the existing quarry. The current archaeological study has noted that there were no recorded archaeological remains within the extension site, but there was potential for currently unrecorded prehistoric features and potential for burial features to extend beyond the boundary of the former St. Peter's church. A programme of further archaeological observations and recording would therefore be undertaken as part of the development. [Au]

Mouchel Parkman Surrey : Mouchel Parkman, 2007, 1341pp, figs, tabs, refs

Work undertaken by: Mouchel Parkman

A number of elements for the cultural heritage were identified in the development area. Among the elements that would potentially be affected were a Grade 2 Listed Building and a WWII pillbox of regional value. A larger number of records were available regarding sites of local interest. The impact of the proposed scheme on the resources of higher importance mainly related to the impact on their setting. The implementation of the landscape strategy was considered to mitigate for this impact such that the residual impact would be neutral on both of these resources. There was inevitably an impact on a small number of sites of local importance. [Au]
