^a *Metabolic Equivalent (METs) expresses energy expenditure as a multiple of resting metabolic rate. One MET is defined as 1kcal/kg/hr and is the energy expended during 1 hour of quiet sitting. The minimum energy expenditure measurable using the monitor, for someone sitting or lying for the whole 48 hour monitoring period is 60 METs.*

**Mean difference at follow-up can be thought of as mean in FACETS arm – mean in CLP arm (after subtracting any baseline differences). Analysis only includes participants with both baseline and follow-up data).*
